Codah I was going to PM you but you have reached your quota so I will post it here:

I bought the PTS miner yesterday and when I executed them on my bots nothing happened. So I decided to run it on my own computer (vmware with all virus scanners turned off) and the following error pops up:

<https://i.imgur.com/Zme5aPN.png>

Looks like something is wrong with the path it's calling. The file is in appdata, but the ?? in front of the path probably gives the error.

What to do? I have .net installed, nd I executed it on 1000 slaves and none of them worked so I'm sure there is something wrong with the exe.

Thanks.

What miner(s) does this drop?

CGMiner, PoolsMiner or Ufasoft?

LionHeartLow - December 7, 2013, 3:34 am

You should make a feature where you can monitor the status of each miner dropped and be able to remotely disable it as well. I'd like to know which of my bots is capable of mining and which are not haha. If a bot is pulling in 0 shares an hour I'd much rather drop them from the miner and clear up my worker list.

I wasn't talking about the source. The source was willfully released under the gplv2 or gplv3 license which means that anything made with the source needs to also be open source.

Below is a cp of the gplv official site.

For example, if you distribute copies of such a program, whether free or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Hello

I'm really interested in buying this miner, it looks great! but I have got some questions. I have sent you PM earlier, but now I decided to post it here.

1. Could it be operated without any RAT? So you just spread the bin file? Can you update the bin

file within the miner?

2. Can you see who uses your miner? Is there any "connections" tab?
3. Could you show some screenshots of the builder gui?
4. Is the bin file FUD? So you don't need crypter?
5. How does the startup work? Anytime they start their computer miner will start with it?
6. Does it have injection?
7. How often do you update?

Thank you in advance, GLWS

Hi,

Im interested the same.

Pls hit me a pm about those question.

thank you much

I'm really interested in buying this miner, it looks great! but I have got some questions. I have sent you PM earlier, but now I decided to post it here.

1. Could it be operated without any RAT? So you just spread the bin file? Can you update the bin file within the miner?
2. Can you see who uses your miner? Is there any "connections" tab?
3. Could you show some screenshots of the builder gui?
4. Is the bin file FUD? So you don't need crypter?
5. How does the startup work? Anytime they start their computer miner will start with it?
6. Does it have injection?

1. It can be used without a RAT, not sure how you meant the second part of the question though
2. You can see the connected Miners in the "Active Workers"-Section on ypool.net (in case you use ypool), otherwise you cannot see the connected workers
3. There we go
Spoiler ([Click to View](#))
4. When I scanned the last Bin yesterday, it was 1/33, take a look at the scan [here](#)
5. Once they start the Computer, the Miner will start mining
6. Actually it does not, but I will use Injection very soon
7. Atleast once a week

Sounds great, I will buy 3 months package today ;)
Sent you a PM regarding purchase

Soccer - December 9, 2013, 4:53 pm

Sorry for slow messages today, I was busy all today with a soccer tournament I had. I answered everyone's messages just before I post this, thanks.

how many bots are you using to mine?

How High - December 10, 2013, 7:49 am

Just sent my payment. Waiting to recieve the miner. :)

Edit: Recived the miner, will update on progress.

Although it has a .Net 3.5 dependency. 2/33 Detection rate.

Actually it is 1/33, you have to disable all the features and don't put your custom icon.

The problem is, we don't know what to add. We don't want to add 1 thing and make a update for it, we want to include more. I would appreciate if current customers would recommend somethings, or even normal members.

It would be nice if we could monitor our miners.

Maxxxior - December 11, 2013, 11:21 pm

Injection and persistence would be great, and maybe some advanced USG. Also botkiller is a great feature. Miner monitor to see your bots and option to update the bin file on their computer will make this miner supreme ;D and keeping it fud

EDIT: Oh yes, and some changelog would be nice

Its 1/33 with no features on. Only reason you seen it at 7/33 is because you added you own icon.

1/33 means it is not FUD :D

Can I crypt it with my own crypter to make it FUD? Or will it corrupt my bin?

Yes you can obviously. Just make sure you have a crypter which can crypt files with .NET 2.0.

You can't mine BTC with this miner. It's Protoshares miner, CPU only cryptocurrency. But you can exchange PTS to BTC. It is working very well, I will be adding some bots in future to earn some more.
