Thread: [Clandestine Beta Announcement \[C++ Crypter\] \(Experienced beta testers wanted\)](#)

Clandestine. - December 2, 2013, 10:36 am

Introduction: Clandestine is a new crypter fully specced with all the features that you'll ever need. The project aims not to be another run of the mill crypter and will offer better quality, support, and stability.

Clandestine is not another "toolkit", as our research team has devoted their time and effort towards making this into an unique piece of software which will set the bar for crypters in years to come.

Background: Over the years we have came across many crypters and source codes. We have seen the flaw of the execution rates, huge stub sizes, softwares propped with junk codes, and undefined behaviour, and not to mention the numerous copy paste crypters released by people with very little knowledge of the process it self, we were frankly sick of this and it resulted in the birth of Clandestine.

Decription: Clandestine is coded completely from scratch in pure C/C++. It has no dependencies. It is compatible with all versions of MS Windows from Windows XP x86 to Windows 8 x64. It only utilizes native Windows API Calls and this has been one of the main focus of our development.

With our personal designed extensive RunPE this will run 100% of the time as long as the executeable meet the few requirements Clandestine needs to encrypt and run your executeable.

Furthermore we have wrapped this in a clean simple and user friendly GUI written in QT C++.

Features:Compatability with all windows versions.

100% Execution rate.

Should work for all bots except those coded in .NET Framework.

Unique anti-emulator techniques

Small stub size.

Icon Changer.

File Binder

File Details Editor.

Custom Startup.

Ability to chose between different types of encryption.

Several injection methods.

Random self generating string encryption.

Friendly, fast and professional live support(not up yet).

Currently our team has tested compatibility with the following software,
we are expecting this list to expand exponentially during the beta phase.

Compatibility list:Andromeda

SpyEye

ISRStealer

DarkComet

CyberGate

Umbra Loader

Athena

...

Beta information: We are currently in the last stages of development and we are announcing at this moment

our beta test of Clandetine so that we can find and select proper group of testers for our software. The testers will need to show their interest in this thread, and write a short introduction about themselves and tell us why we should pick you.

We are currently looking for 10 people with knowledge and experience in this field. You will be expected to write a review of Clandestine

as well as report any and all bugs that might be present in the testing phase as well as AV detections with details regarding encrypted software and build.

You will be under NDA(None Disclosure Agreement) binding you to keep the information, and status of development to your self.

Any experience with programming is beneficial for any applicant.

Testers will be expected to test and review results of different types of software which the tester may find beneficial.

Example application:

Age:

Country:

Experience:

Coding languages: If yes, which ones?

Bots you currently use:

This software is only made for research and educational use and we do not endorse or encourage illegal activities in any way.

Clandestine TEAM cannot be held responsible for any misuse of this software.

PS: We will not respond to PM's as all applications needs to be posted in the thread.

Best Regards
Clandestine TEAM

Sir Asylum - December 2, 2013, 11:03 am

Goodluck with your project.
Seems very nice.

Damdomy - December 2, 2013, 11:24 am

The GUI is horrible. I wouldn't take a product seriously if the coder doesn't know how to code beautiful GUIs that's just me :l

blem - December 2, 2013, 11:26 am

That's because you don't know anything about malware.

Sleazy P. Martini - December 2, 2013, 11:29 am

Yes because the product must be shit if it isn't using a metro theme.

D??M! - December 2, 2013, 11:30 am

And thats why you'll never be taken seriously.

Bat™ - December 2, 2013, 11:30 am

Wow, first post and that too a crypter. Nice work. Good luck with this project.
If you want i can beta test it. :)

Clandestine. - December 2, 2013, 11:31 am

Thanks for replying. We are open for all suggestions to improve our product, but GUI isn't our first priority as it's whats beneath the hood thats important.

If you want a GUI with a ton of animations and stuff like that i would recommend buying a .NET crypter, but then again your execution rate will be as low as 60-70%.

Doctah - December 2, 2013, 11:32 am

(Dec 2, 2013 12:24 PM)Damdomy Wrote: [\[CITE\]](#) The GUI is horrible. I wouldn't take a product seriously if the coder doesn't know how to code beautiful GUIs that's just me :l

Hahaha, you got a twisted sense of a good product if you think the GUI is the backbone of it.

Skorp - December 2, 2013, 11:33 am

This is posted in the wrong section.

Damdomy - December 2, 2013, 11:42 am

(Dec 2, 2013 12:32 PM)Dr. Lab Wrote: [\[CITE\]](#) Hahaha, you got a twisted sense of a good product if you think the GUI is the backbone of it.

Not at all! I just think that if the coder puts in the effort of making a nice looking GUI, the product usually/might be a good one. Although most/some times that's not the case.

Get off my back, i just like looking at pretty GUIs.. ㄟ_ㄟ

SIM-121380 - December 2, 2013, 11:51 am

The GUI looks very good and professional to me

Crab - December 2, 2013, 12:07 pm

Features sounds great. Let me know if you need a beta tester. I'd be happy to test it with a few programs.

Clandestine. - December 2, 2013, 1:30 pm

Thanks for your interest but as stated in thread we want a small application containing information about "you" and your experience. Not just that you want to participate in the beta.

Example application:

Age:

Country:

Experience:

Coding languages: If yes, which ones?

Bots you currently use:

J?ck - December 2, 2013, 1:49 pm

GUI really shouldn't be a make or break for people to buy. Although on HackForums..

Sleazy P. Martini - December 2, 2013, 2:09 pm

And you're a perfect reason why theres shit products on HF since they concentrate on the GUI to make GUI kids like yourself happy then end up with a shitty product, Someone could create an amazing crypter with a shitty GUI.

Damdomy - December 2, 2013, 2:12 pm

(Dec 2, 2013 03:09 PM)Richard Z. Kruspe Wrote: [\[CITE\]](#) And you're a perfect reason why theres shit products on HF since they concentrate on the GUI to make GUI kids like yourself happy then end up with a shitty product, Someone could create an amazing crypter with a shitty GUI.

Like i said, i like nice, user-friendly GUIs they're a must. Of course the features/code is more important. But coders need to focus on looks as well...

Sleazy P. Martini - December 2, 2013, 2:16 pm

(Dec 2, 2013 03:12 PM)Damdomy Wrote: [\[CITE\]](#) Like i said, i like nice, user-friendly GUIs they're a must. Of course the features/code is more important. But coders need to focus on looks as well... They don't need to focus on looks, All it needs is a few buttons and text boxes, Everyone can operate that.

SIM-121380 - December 2, 2013, 2:21 pm

Well if u need beta tester, I'm here too

Age: 20

Country: Belgium

Experience: I'm in the scene since 2006, I began using RAT while Bifrost, Poison Ivy were the best (spy-net and cybergate were not even out). At this time, we crypted file with soft like Themida then firsts crypters came out.

Coding languages: If yes, which ones? Delphi (main), C/C++, PHP, HTML

Bots you currently use: I'm not spreading, I'm just targeting specifical persons to troll my friends,.

Damdomy - December 2, 2013, 2:40 pm

(Dec 2, 2013 03:16 PM)Richard Z. Kruspe Wrote: [\[CITE\]](#) They don't need to focus on looks, All it needs is a few buttons and text boxes, Everyone can operate that.

ummm.... Ok, i like looks. Problem? ?

Maybe cuz i'm a web-developer, it matters to me... I dunno..

_Spy - December 2, 2013, 5:35 pm

Age: Older enough to drink

Country: EU

Experience: I'm in the scene from oldest ages soupnazi era, chasenet and IRC's used RATs, IRC Bots, Virus everything linked to malware and stuff when protecting and crypting needed Ollydbg and a Hex editor only, I also do a lot of reverse engineering .

Coding languages: C as Main Learning ASM, Python and Thinking about PHP

Bots you currently use: Got a large collection of most bots on sales or leaked I don't use them it's just for research and reverse .

SIM-121380 - December 2, 2013, 5:38 pm

(Dec 2, 2013 06:35 PM)Vic Wrote: [\[CITE\]](#) Age: Older enough to drink

Clandestine. - December 3, 2013, 4:00 am

Thanks for your interest everyone, but please keep in mind that we want the applications in the thread as we are getting more and more PM. We are also unable to reply because of our currently low post count.

For those who wonder, stub size is currently at 50-55kb, it can and will be made lower, but right now size isnt our first priority as we're working on some other parts that needs our attention before an official release comes forth.

Thanks :)

Bat™ - December 3, 2013, 11:20 am

Age: 20

Country:RU

Experience: Have quite some experience in setting up botnets/ utilising botnets.

Coding languages: If yes, which ones? VB6

Bots you currently use: Andromeda

Clandestine. - December 3, 2013, 11:32 am

For some reason people do not like the fact that we offer a service that's better than theirs, so they choose the unprofessional way, to -rep us without any reason.

It's not our lifestyle but sometimes we gotta accept it :)

Crab - December 3, 2013, 11:36 am

Age: 19

Country: US

Experience: Ive used crypters and have even made some stubs FUD so I have lots of experience.

Coding languages: If yes, which ones? C++. A little bit of java also

Bots you currently use: Plasma

DjNotAHacker - December 3, 2013, 11:36 am

I'd be a perfect beta tester for this project because I can test your new product on a large array of premium Remote Administration Tools as well as report each and every bug as I go through each and every feature in depth.

Age: 17

Country: Australia

Experience: Begun "hacking" in 2010.

Coding languages:

Light Experience: AutoIt, HTML, PHP

Heavy Experience:C, C++, .Net, JAVA

Bots you currently use: BlackShades NET, BlackShades Stealth, BlackShades Fusion, CyberLink, legacyLink, PlasmaRAT.

Remote Administration - December 3, 2013, 3:49 pm

Age: N/A

Country: USA

Experience: I've beta tested 100+ Of Different Products of all types. And Will write a 3,000 word report on every detail I find.

Coding languages: I'm learning C#, C++, AutoIT and VB.net

Bots you currently use: 500+

_Spy - December 3, 2013, 4:23 pm

Some stuff here and applications are just hilarious

Clandestine. - December 4, 2013, 6:42 am

Thanks for all the applications everyone, still half of them ends up in our PM for some reason though.

Reminder, again: Applications through PM will not be accepted and will not be a part in our evaluation.

We're still working hard on the crypter to make it perfect, and we are progressing bit by bit towards beta release every day, stay tuned:)

Celay - December 4, 2013, 7:29 am

The GUI isn't even that horrible?

I hope it will be a good Crypter, good luck with your product!

Y45KUR - December 4, 2013, 7:57 am

Age: 18

Country: UK

Experience: Used lots of RAT's and Keyloggers. Examples would be: Unknown Logger, Project Neptune, DC 5.3.1, BlackShades, xTreme RAT, etc.

Overall I have very decent experience with RAT's and crypters aswell. I've used a variety of products and I can configure them myself aswell.

Coding languages: If yes, which ones? VB.Net / PHP / C# / C++ / MySQL / HTML5 / CSS

Bots you currently use: DarkComet 5.3.1 / SpyNet 2.6 / xTreme RAT / BlackShades / Unknown Logger / Project Neptune / etc

skilshotz - December 4, 2013, 10:15 am

Age: 19

Country: Netherlands

Experience: Pretty much had 5 - 6 different crypters. And tested and used them a lot the past 3 months.

Coding languages: If yes, which ones? Not really, I have a basic .net knowledge and I can understand it a bit probably but can't find bugs in the code etc.

Bots you currently use: I use andromeda, solar.

hummel88 - December 5, 2013, 6:57 pm

Age: 29

Country: Russian

Experience: So much curiosity

Coding languages: Anyone

Bots you currently use: Citadel + Dexter + Custom POS

Radagast - December 5, 2013, 10:11 pm

People try to gang-rep us because they are afraid of a better product than their own approaching. It resulted in a ban and we have no idea why. At this very moment we have no interest in a war of kids as we are way too old for that, let's just say we got way better things to spend our time on. We will rather release our product on trojanforge.co and other forums. We might release here after beta when we got a reputation to show to.

Have a great day everyone

Y45KUR - December 6, 2013, 7:29 am

Aww man. That's sad to hear. If it's true that your opposition is NegRepping you guys for competition, that's just sad.

I just think that good competition is best for this market. Good luck on the Crypter Development! ?
