Thread: [Snapchat Web Client](#)

**VladHQ** - December 4, 2013, 6:00 am

Hey HackForums!

I am creating a Snapchat web client in PHP and I would like to show it off. First I would like to say that this was made using an [unofficial API](#).

This is a very basic client that I have been developing for some time now. Somethings such as view images and uploads are working, but some things like video recording and video viewing are not working yet (hopefully soon).

I do not have a time limit on the images, so you can view them as many times as you would like. It won't show that you seen it to the person who snapped you, and you can view the image as many times as you can unless you looked at it in your phone.

I have tested this for some time and you can view images, but sometimes, the images you send could sometimes turn out corrupted. It does need more further testing. I can find which images are corrupted using PHP functions, but it's still in early development mode.

Right now, when you login, you will log out of Snapchat due to their session restrictions.

Please use it and post feedback.

<http://claw.ga/websnap/> (If it doesn't work use <http://snapchat.3owl.com/> ) There are some CPU issues. The script executes a lot of requests such as login, etc so it's CPU extensive and may get down unexpectedly.

**blue++** - December 4, 2013, 6:33 am

I have not used it yet, but it does look that it could use some CSS.

**SIM-1980240** - December 4, 2013, 6:52 am

Thanks the application is very minimalist and works great! I can even use my computers webcam.  
:D

That's pretty cool dude :) good job on that one! :)

**VladHQ** - December 4, 2013, 8:45 am

Thank you guys. CSS is coming later after it is completed at least 80%. It is made to be minimalistic for people who don't have a phone to use and need to check a snap. I will be adding an option to sign up for snapchat when I have some time, it's very easy but I just have no time right now. Thanks for positive comments!

**Das Swag** - December 4, 2013, 8:46 am

Should I be seeing this when I go to the link?

**?XilluX** - December 4, 2013, 8:47 am

The site is down for me ! Please fix it.

**VladHQ** - December 4, 2013, 8:49 am

(Dec 4, 2013 09:46 AM)Das Swag Wrote: [\[CITE\]](#) Should I be seeing this when I go to the link?

Nope, I use the hosting 3owl. I don't know why it's showing that for you. My shared hosting sucks, let me see what's going on.

Yep, my website is down because apparently, the CPU was exceeded beyond the limits. Ugh, I hate this host...

I set up a new domain that shouldn't have any issues because it uses a subdomain and subdomains don't have any issues. <http://snapchat.3owl.com/>

**Charger** - December 4, 2013, 9:33 am

I made the exact same thing (without a interface) a few months ago as a proof of concept. Nice job.

**VladHQ** - December 4, 2013, 10:16 am

Nice job.

Do you mind sending me a link so I can take a quick look?

**PigBacon** - December 4, 2013, 1:18 pm

Yeah php-snapchat is pretty good - glad you didn't use snaphax like the other 50000 projects I've seen.

Story support yet? Is that even merged into php-snapchat? I can't remember.

**VladHQ** - December 4, 2013, 3:47 pm

It is merged with that, but I don't use stories personally, and I don't want it to become too complicated by not even knowing what it is. I just want to implement better design and video compatibility. Everything else could be done on the phone.

**+iPokemon** - December 4, 2013, 5:45 pm

Is it weird that I know the developer of the repo you're using? I think it is...

**Le Spy** - December 4, 2013, 5:47 pm

inb4 all of your logins were just phished.

Why not upload source?

**Charger** - December 5, 2013, 3:16 am

(Dec 4, 2013 11:16 AM)VladHQ Wrote: [\[CITE\]](#) Do you mind sending me a link so I can take a quick look?

It's somewhere on my school profile. I'll see if I can find it.

**PigBacon** - December 5, 2013, 5:06 am

I know him too! Hell, I'm the most informative person who's done anything involving php-snapchat. Check out the issues and stuff. I am a god.

(Dec 4, 2013 06:47 PM)Bitcoin Wrote: [\[CITE\]](#) inb4 all of your logins were just phished.

Why not upload source?

Think of all the lucrative things you can do with a Snapchat account. Like... sending photos to people..?

**AbuseTheSystem** - December 5, 2013, 5:13 am

Half of them are corrupt at the moment :(

**VladHQ** - December 5, 2013, 5:23 am

Here is the source: <http://claw.ga/websnap/Snap.zip>

I don't log anything, but the pictures are saved so that users can view them later. I will be making a cron job to delete pictures every week.

**VladHQ** - December 20, 2013, 6:08 am

Some people requested me for the source, so here it is:

<http://snapchat.3owl.com/site.zip>

**Corehack** - January 10, 2014, 6:32 pm

Trying to make my own private Snapchat webclient spammer with this. Hopefully it will work. Maybe I put it on sale.. just maybe.

**VladHQ** - January 19, 2014, 9:35 am

This thread should be closed as the original website is down and I am developing a new one which could be found in my signature.

**Exodi** - January 19, 2014, 10:14 am

Woah, I love it when my battery runs low on my phone. Now I can use this :)

**VladHQ** - January 19, 2014, 11:30 am

(Jan 19, 2014 11:14 AM)safispreej Wrote: [\[CITE\]](#) Woah, I love it when my battery runs low on my phone. Now I can use this :)

It doesn't work on iOS devices due to a webkit bug in them. It won't show up the table on them for

some reason. And webkit renders weird borders around the table, while FireFox doesn't.

**Kondor** - *February 23, 2014, 8:04 am*

Thanks, very usefull. Keep up the work.

**VladHQ** - *February 23, 2014, 11:32 am*

(Feb 23, 2014 09:04 AM)Kondor Wrote: [\[CITE\]](#) Thanks, very usefull. Keep up the work.

You are welcome, although Snapchat made some core changes making this useless right now. Hopefully, I will fix this up in the future.

**VladHQ** - *March 7, 2014, 8:00 am*

Since this doesn't work anymore, I will be closing down this thread.
