Spoiler ([Click to View](https://hackforums.net/showthread.php?tid=389756))<https://hackforums.net/showthread.php?tid=389756>

4. Next you will want to make your FUD server into a torrent file.

- Open UTorrent or some other bit torrent client.
- Click File, Create New Torrent, Add File (your fud file), Create and save as.
- Now we have our torrent file that we can upload to torrent sites.

Spoiler ([Click to View](#))

[IMG]<http://i288.photobucket.com/albums/ll191/djgringoboy2003/MakeTorrent.jpg>[/IMG]

Now You need to set up a proxy so you don't get banned, here's how:

- Go here [VPN, Proxies, and Socks](#)
find a proxy.

TIP> Even transparent proxies work

On firefox go to Tools>Options>Advanced>Network (Tab)>Settings
Example:

[IMG]<http://i288.photobucket.com/albums/ll191/djgringoboy2003/proxy.jpg>[/IMG]

Click "OK" and you're ready to go....

5. Make an account at #.org

- When you have signed in click on "upload torrent" (at the bottom of the page).

- Now follow the image below

Spoiler ([Click to View](#))

[IMG]<http://i288.photobucket.com/albums/ll191/djgringoboy2003/torrentpage.jpg>[/IMG]

6. Now we will set up the seeding of your torrent.

- go to your torrent on # and download it.

- It will say that you already have this file and then asked if you would like to add the trackers from

it. Click Yes.

- Now go back to Utorrent and right click on your file. Go to properties. Follow image below.

Cool,

Using this technique i have gained well over 700 bots in less than a week.

I just look at the top 100 torrents then upload the latest version or a crack binded with my server.

P.s ThePirateBays captcha system is down at the moment so you cant upload files atm?

Macca - April 28, 2010, 3:23 pm

sick man i will definately try this !!!

Natepen - April 28, 2010, 4:37 pm

If you got 700 bots with Nero 9 would you care to share how with with rest of us or more importantly myself?

Gringo241 - April 29, 2010, 1:55 am

Nero 9 is just a cd burning program, I bind my server with many different types software and upload

Make sure your file is FUD (fully undetectabe) bind your crypted file with something that alot of people download.

Write a bit in the description to make your torrent look legit.

Use a PROXY as stated in the tutorial.

It must be a problem with the startup on your server, what RAT + Crypter are you using?

Try uploading larger files like photoshop with the keygen included (bind your crypted server with the keygen)

Small files seem to get tagged more than large files.

This would be great if pirate bay's login and registration did not fail super hard. Wont let me register keeps giving me incorrect code yet it is for shure 110% correct.

Anyways thanks ... :)

All my accounts get banned after downloading my own torrent.

PacketBeast - October 10, 2010, 11:44 am

When I enter in the verification code when making an account, it always says that the code is wrong even when I am 100% sure it is right.. This happening for anyone else?
