Teferi - December 6, 2013, 8:03 am

Hi HackForums,

I'm back with some defaced websites. Why, you ask?

Well I was bored, and I enjoy defacing websites.

He most likely SQLi'd one site and saw there was a lot of sites hosted on that server and defaced them all (through symlink or badly set permissions)

Tastylicious - December 6, 2013, 8:49 am

Damn where do you have that Emma Watson Gif from?

dabox - December 6, 2013, 10:22 am

Sounds like something only a skid would say.

tl;dr: you're a skid :D

m00dy - December 6, 2013, 11:13 am

emma watson gif -> save image as... just for reasons...

youtube linkes -> favorate them to listen to them

you know there is alot of skiddes who goes around defacing websites with their lame 1mg size index full of all that crap about how admin sucks bla bla zero security and tons of horribly aligned pictures.

but you my friend, OP did great job with those deface pages, love it, specialy the musics (and emma of course)

Lol am I allowed to criticize? I'd be more than glad to sell you a few roots that contain well over 31 sites if you'd like me to prove that I'm not in the least jealous.

Anyway OP, you're a pretty lame guy tbh. You'd be having a lot more fun if you actually gained the knowledge to take down targets.

Nerdi - December 6, 2013, 11:50 am

I'm assuming you got into a host and then just went after all the sites on that host.
Or you found a method and used Google to find vulnerable sites.

The real accomplishment would be 31 separate attacks that utilized different methods.

Rooter - December 6, 2013, 2:51 pm

Good job since you're a beginner, but honestly, I remember defacing websites back in 2009. (and rooting some too!)
