Thread: [Teamspeak 3 server admins fighting my ddos. - they seem to win - need help with ports](#)

DatEqualizer - December 7, 2013, 9:17 am

Hi,
I been ddosing some dude's ddos as he kinda stole my steam acc and well he's a jerk.

So,for 2 days I was able to ddos his TS3 via ESSYN port 80. UDP just made it lag a bit. Now it just does completely nothing to it. ?

So it seems like he is able to block my port 80 ESSYN attacks, what can I try out? Did he completely block my IP or just the port and how can I find it out?

BTW I use reBOOTER plus VPN (rotating my country and server ofc), so the methods I could use are : "UDP, UPD Lag, TCP-AMP,ESSYN,RUDY,ARME,SLOWLORIS,GET,HEAD,POST,SOURCE"

Hope someone can help me, thx

I don't know much about DDossing ts 3 but seems like he changed the ip of the ts 3 or he got DDoS protection.

I would try buy another booter and hit it whit Udp. I mean DDoS the ip whit 2 booters. I think Essyn is more effective to websites than ts 3.

I bet there is someone who knows little bit more ts 3 DDoS and can help you more.

DatEqualizer - December 7, 2013, 1:28 pm

well I he still got the same domain so I can just extract the IP

SIM-2059193 - December 7, 2013, 2:26 pm

I dont know much about ts3 but arent you able to change TS ports? Just point your booter at the ports used for teamspeak (google them) Otherwise he probably got ddos protection and you might need a stronger booter.

Like most people say, 60gb in a booter you will at rarest get 1/2 a mb, but that is probably the same thing as ddos protection so think about it.

Wow , awesome a WODDoS ! (War of DDoS) , .. Kidding , please get more knowledge about how to hork my friend :)

BTC Exchange - December 7, 2013, 3:06 pm

Please PM me. I can offer you a very good DDoSing Service.

I guarantee to null his server ;)

Cheers
