Don't Forget to say thanks

Aura - December 9, 2013, 3:23 am

OR you could just do it manually, take the VEN and DEV number, enter them on this website :

<http://www.pcidatabase.com/>

And find the hardware along with the right driver ?

It's better if you do it manually, because then you can identify what the missing device is and go get the driver for this device on the manufacturer's website, making it sure that you go get the latest available drivers for that device from a trusted source.

No problem.

I myself was taught this by my mentor, who is another member of HackForums. We learn more everyday.
