And under the "Current Pending Sector Count" and "Uncorrectable Sector Count" its listed as yellow and my hard drive's status is "Caution" because of this.

Should I be worried about this and is there anyway to fix this?

Any help would be appreciated.

Yes, you should be worried. Keep your data backed up because the hard drive is on its way out.

Your hard disk is about to fail. The utility is warning about it. The caution means it can die any moment now.

Ok, Thank you guys for the info.

Any time frame that it might go out at?

archangel.dmitry - December 10, 2013, 8:38 pm

It is not predictable. It can happen now or in couple months. SMART is rather about what that when.
