Thread: [how to self delete c99.php shell](#)

FMtheHackerVenkat - December 9, 2013, 11:42 pm

I hacked ? one website and inejected shell c99shell.php but now i want do delete that shell . the Option "self remove" showing can't delete c99.php ... please help me how to delete that . ??

Do you have shell access as in a login to the terminal? If it's read-only, from my experience then I don't believe you can do anything else.

Create a php file and place `unlink('c99shelllocation.php');` then visit the page, that should work should it not?

Thank you ! it worked at the target machine .?

But Before testing at the target machine , i have started the apache server and tested in my local host (kali linux) it gave an error "Can't delete /var/www/domain.com/c99.php"
it looks like apache user dont have permission .

?? got new doubt here: Actually at the target machine i have inserted shell through sql injection as database user . Please suggesst me how to delete the file from the database commands.. will be useful for future

thanks in advance
?

search delete on the shell.
Good Luck.
