Legion | Beginner HelpDesk

Good day, sirs.

This thread is the Official HelpDesk Thread of the group Legion.

In order for your questions to be answered, simply post them on this thread and a member of the group will post their response to it once they see it; several members can answer the same question, if they feel like something was missing in the first answer, so make sure to check back to the thread for the answer.

Consider subscribing to the thread - button in upper right corner of this post - so you'll get notified when new posts are made.

Note: The old thread started by 'Rogue' is now INACTIVE. Please refer to this thread for help!

Regards,

Legion

phreaker - December 11, 2013, 1:59 pm

We are here for all beginners who need help getting started! ?

Cha0 - December 11, 2013, 2:00 pm

That's absolutely right, I'll do my best to help out as well. ?

Glad we decided a new help desk thread had to be made.

XxXDARKHunterXxX232 - December 11, 2013, 2:03 pm

How to evade heuristic IDSes using self changing Shell Code?

How to escalate privs on a *nix box without Race Conditioning or IFS?

How to evade ASLR without bruteforcing and ret2reg?

Thanks.

LevelUp - December 11, 2013, 2:14 pm

Thanks.

1. Get pass IDS signature check with unicode conversion, compression/decompression of instr and loading of SC, instr reversal, XORing vals etc
2. Try SES or LD_PRELOAD
3. Pointer leaking

XxXDarkHunterXxX232 - December 11, 2013, 2:21 pm

1. Yes
2. Sure, I'll send you a link in just a few minutes :)

?ain - December 11, 2013, 8:39 pm

If I install .NET 4 on, will it be able to process all the ones before?

If my ports are not normally forwardable, can Metasploit still listen to/for reverse TCP payloads and such?

daveyman123 - December 11, 2013, 8:47 pm

What is the best way for a single person beginner to start spreading my rat??

Acroz - December 11, 2013, 8:52 pm

(Dec 11, 2013 09:47 PM)daveyman123 Wrote: [\[CITE\]](#) What is the best way for a single person beginner to start spreading my rat??
Torrent spreading! Bind your FUD RAT to a popular torrent and spread it via torrent sites.

Alternatively, you could spread via omegle and other chat sites. If you need help, feel free to PM me ;)

_Silky - December 11, 2013, 10:27 pm

(Dec 11, 2013 09:39 PM)G0dOf4ll Wrote: [\[CITE\]](#) If I install .NET 4 on, will it be able to process all the ones before?

I'm not sure what you mean by this, but all the features prior to 4, should process on 4 if that's what you're asking.

(Dec 11, 2013 09:39 PM)G0dOf4ll Wrote: [\[CITE\]](#) If my ports are not normally forwardable, can Metasploit still listen to/for reverse TCP payloads and such?

On your LAN, yes. But you won't be able to do external attacks without forwarding the ports.

?ain - December 11, 2013, 10:30 pm

(Dec 11, 2013 11:27 PM)_Silky Wrote: [\[CITE\]](#) I'm not sure what you mean by this, but all the features prior to 4, should process on 4 if that's what you're asking.

On your LAN, yes. But you won't be able to do external attacks without forwarding the ports. Any ways you know for a Linux computer to open ports? The biggest issue that no one can resolves is that I use my phone's mobile hotspot, it is an Android, unrooted, but can easily be rooted with Odin.

Vouch for this HelpDesk and for them , i have talked with At0m1c before and he know what he do !

Good Luck guys , hope you help a lot of people ! :)

Renonymous - December 12, 2013, 3:06 am

Well, I posted this on the other thread, but I guess I'll post it here as well. Seems like it's got a better chance of being answered.

Would you be able to recommend a free crypter? It definitely doesn't need to be FUD, but of course, it's preferred.

Cha0 - December 12, 2013, 3:11 am

(Dec 12, 2013 04:06 AM)Renonymous Wrote: [\[CITE\]](#) Well, I posted this on the other thread, but I guess I'll post it here as well. Seems like it's got a better chance of being answered.

Sorry but you won't find any free crypter with a good detection ratio. (At least not one that isn't backdoor'd)

If you'd manage to get a free crypter it'll be 30/45 or something.

Renonymous - December 12, 2013, 3:15 am

(Dec 12, 2013 04:11 AM)At0m1c Wrote: [\[CITE\]](#) Sorry but you won't find any free crypter with a good detection ratio. (At least not one that isn't backdoor'd)

Thread: <https://hackforums.net/showthread.php?tid=3829963>

Thanks again for that. Unless I can find a better one, that'll probably be my purchase.

However, you could help me with something else. I want to start learning hacking PROPERLY, but until I've got the right tools, I'm not going to feel confident enough.

I'm most likely going to be buying a crypter (probably the one above) this month, along with a VPN (still need to decide which) - what else would you recommend I buy before I get started on the journey?

I'm currently messing around with DarkComet, but as far as I can tell, it has nothing that lets you actually take over your slave's computer and, say, use the mouse. Obviously, it's got loads of other great things, but it's missing that...?

So I guess if there's a better RAT, I should probably pick that up.

But yeah, anything else?

I've heard good things, and it costing money makes me think it's probably a higher quality product than the free stuff.

And yeah, SQLi, XSS and the like are definitely on the list. Just need to get started on them...

(Dec 12, 2013 06:16 AM)At0m1c Wrote: [\[CITE\]](#) Like said before, go with [nVPN](#).

Ah, got it. Kinda buggy, though...

Anyway, is it worth purchasing this stuff with say, a pre-paid debit card? Because that way, they've got no way to track me if I do anything stupid with them, (theoretically, of course, if you've got enough money, it's possible to track anyone) or is it safe enough to purchase these things with PayPal with my normal card?

If the latter, I may end up purchasing the crypter today.

Cha0 - December 12, 2013, 7:09 am

I wouldn't to be honest.

A pre-paid CC would be fine I guess but the best way to pay anonymously online is with Bitcoins.

If you want to get into real hacking, drop the tools right away, they're useless right now. What is the point of using tools if you don't understand how they work in the backend ? You have to understand the backend end of tools, not the frontend, otherwise, if your tool gets stuck or returns an error, how are you going to analyze that error if you don't even know what the tool does ? You can't, exactly. If you want to get into real hacking, you'll have to learn the basics first : computing, networking, servers management, websites managements, etc. All of these are basic computing notions, it mind sound really stupid yes, but how do you expect to hack into something (which means to find how something works and exploit it) if you don't even understand how it works and how it should be used

first ? You can't say "I'll learn computing by hacking.", no. You have to learn AT LEAST the computing basics first and then you start learning how you can turn all the theory you acquired into hacking skills. So if I were you, I would start reading tutorials around HackForums right away about : websites building, networking, cryptography, etc. All the theory tutorials you can read, read them and put that theory in practice. There you'll acquire experience and eventually be able to turn that basic experience into hacking experience.

If you were looking for a "shortcut" in learning hacking, I'm sorry to tell you, but there's none.

It depends on what kind of 'hacking' you would like to execute. Web Hacking, Account Jacking, or Computer Hacking.

1. Web Hacking

For this you should definitely start by learning SQL Injections. This, if done right, allows you to gain access and control of the website.

2. Account Jacking

You will need to learn how to brute force or Social Engineering

3. Computer Hacking

To gain full access to a computer you will need to understand how to RAT which stands for Remote Administration Tool.

You can google all of these or look them up on youtube for tutorials.

XxXDarkHunterXxX232 - December 12, 2013, 4:27 pm

Eh, sorta right.

For website hacking he should learn SQL, and PHP. Maybe some javascript. (SQL injection isn't the only way to hack a website, there's PHP-Object Injection, CSRF, CRLF, SSI, RFI, LFI, LFD, XSS

Account hacking-won't bother, should be self explanatory

RATing isn't the only way to hack a computer, you can exploit vulnerable service on port that is open, and attempt to get a remote shell,(Can even be achieved by a simple NMap scan, and metasploit, but if metasploit doesn't have it, you'll need to make your own exploit, but if you're going against an experienced user, it'll be a bit harder if he has a IPS or an IDS, bypassing these using self changing shellcode and bypassing it XORing values, Unicode converts as stated on the first page, thanks to LevelUp. Fragmenting the packets over multiple headers work as well, spoofing the IP is a must too, and even the port if you're doing a specific port. You can also bruteforce the SSH login implying they have one and haven't changed the port from port 22, and attempting to escalate privs on the box lets say on a *nix distro using IFS, Race Conditioning and again on the first page SES and LD_Preload.)

To both of you, your question are just too vague, it's like the word "hacking". Hacking covers a lot of domains and branches. You want to start to learn everything at once ? You can't. You have to be more precise. What interests you in hacking ? What are your goals, what do you want to achieve with it ? What are your current skills. Give us more informations, then we'll be able to put you on the right direction.

Vampireasa - December 21, 2013, 7:46 pm

What could be the reason of me not receiving logs onto my GMAIL account?

Well, a good start would be programming. Understanding how a program works is a lot better than just firing up a program like havij and watching it go. You'll benefit yourself a lot more in the end.

Languages to learn:

- Java
- VB
- SQL
- C Series

That would get you going in the right path. Then you might wanna learn or try building a RAT such as cybergate, and spreading. While that isn't hacking, it's a good start. Maybe also venture into SQLi, LFI, RFI, etc. That would also be a good start!

(Dec 21, 2013 08:46 PM)Vampiresa a Wrote: [\[CITE\]](#) What could be the reason of me not receiving logs onto my GMAIL account?

What are you using to send the logs? A RAT, keylogger, what? If so, what brand?

Vampiresa a - December 21, 2013, 7:52 pm

(Dec 21, 2013 08:48 PM)Amanda? Wrote: [\[CITE\]](#) Well, a good start would be programming. Understanding how a program works is a lot better than just firing up a program like havij and watching it go. You'll benefit yourself a lot more in the end.

Languages to learn:

- Java
- VB
- SQL
- C Series

That would get you going in the right path. Then you might wanna learn or try building a RAT such as cybergate, and spreading. While that isn't hacking, it's a good start. Maybe also venture into SQLi, LFI, RFI, etc. That would also be a good start!

You're in the wrong place if you're looking for jtags, lol.

MrDarkrai - December 22, 2013, 6:09 pm

Nice thread, quick 3 questions.... What port do I use when im ddos' ing somebody using a UDP attack? 2nd Question: (VPN: <https://hackforums.net/showthread.php?tid=3288623>) How do I setup this VPN? Like will I, myself have to manually portforward? If so, how? 3rd question: when ddos' ing, how do I stay anonymous? like when someone tries to trace the packets back on the router log to see who ddos'ed them, it doesnt show me. Use a VPN correct? just connect then start ddos' ing, then when ur done, disscconnect from the VPN?

Sm1th???? - December 22, 2013, 8:05 pm

#1: Use port 80 as it is always open for routers (HTTP).

#2: You massively misunderstand what DDoS'ing is. A Distributed Denial of Service attack is an attack from Multiple sources, Multiple. Spamming packets from your own router would be a DoS. Your router also does not have the bandwidth to send any decent size DoS so it would not be effective at all. (you will not be taking down anyone's internet from your own).

#3: I would buy a booter to DDoS from. <https://hackforums.net/forumdisplay.php?fid=232>

Tons there. You will never get in trouble from using that. A really cheap booter I recommend is [DollarBoot](#).

You're DDoSing, so you will be fine. I'm guessing you're using a booter/stresser so there is no need to use a VPN.

(Dec 23, 2013 12:19 AM)baby tokes Wrote: [\[CITE\]](#) I would like to know how to hack a multiplayer web browser game...I play a pay to win and would like to know how I can hack money

You can try to find a vuln on the site, or just try and RAT the administrator of the site.

baby tokes - December 22, 2013, 11:25 pm

I'm not real smart with hacking soo.

And I don't really know how that would work..doing it that way

Understalker - December 23, 2013, 12:08 am

Hack a Wordpress website ? What do you mean ? In what way do you want to hack it ? For Wordpress websites, you'll have to look for which version of Wordpress this website is running, and look around the web or tools to see if there's a public exploit that have been discovered for that version of WordPress.

Exemple :

http://www.cvedetails.com/vulnerability-list/vendor_id-2337/product_id-4096/

(Dec 23, 2013 07:09 AM)baby tokes Wrote: [\[CITE\]](#) So using a rat on the game would let me change the value of what I wanted

No it won't. A RAT is a Remote Administration Tool, it's a software that when "installed" (via a stub mostly) on a computer, will give the "host" computer to ability to control that computer (or any other device with the stub installed on it) remotely : access the files and folders, launch a remote execution, turn on/turn off the webcam, etc. It has nothing to do with "games" at all. You can't change the values of a "game" with a RAT. I think you mixed two concepts together.

whateverdaweather - December 23, 2013, 6:23 am

(Dec 23, 2013 07:09 AM)baby tokes Wrote: [\[CITE\]](#) So using a rat on the game would let me change the value of what I wanted

I think there was some misunderstanding. A RAT is used to gain access to someone else's computer, I believe you don't want to do that.

You want to change a value in a web based game? Correct?
Would you mind saying what game?

Try looking up Cheat Engine, that is a handy program to change values in games.

edit: Sorry didn't realize aura was on or someone answered your question, so I thought I might as well answer.

Django - December 23, 2013, 6:25 am

Could anybody teach me how to crack Steam/Netflix accounts? I've been trying to learn how to crack my own proxies, make my own wordlists etc but I can't really find anything useful.

Please PM me if you can help me.

Aura - December 23, 2013, 6:28 am

(Dec 23, 2013 07:25 AM)Mechanical Mage Wrote: [\[CITE\]](#) Could anybody teach me how to crack Steam/Netflix accounts? I've been trying to learn how to crack my own proxies, make my own wordlists etc but I can't really find anything useful.

Please PM me if you can help me.

People here usually crack Steam/Netflix accounts with Sentry MBA. What they do is that they gather a good proxy list (you can obtain a couple of them easily in the VPNs, Proxies and Socks section) and either a good a password list or a good combo list (not allowed on HackForums). Then they load both of these list in Sentry MBA along with a config that is designed to work against either Steam accounts or Netflix accounts and often bought off the Marketplace and then they launch Sentry MBA.

Another way would be to mass spread a RAT and grab the passwords of all your slaves and see if they have any Steam or Netflix account. Also, for Steam accounts protected by SteamGuard, good luck cracking them and obtaining full access to them.

baby tokes - December 23, 2013, 6:53 am

That's why I asked if RAT was what I needed...but cheaat engine Is a no go..that's why I'm here.

Maybe if one of you could look at the game I'd be happy to link you

Aura - December 23, 2013, 6:57 am

(Dec 23, 2013 07:53 AM)baby tokes Wrote: [\[CITE\]](#) That's why I asked if RAT was what I needed...but cheaat engine Is a no go..that's why I'm here.

If the game is client-sided, you will easily be able to use a software like CheatEngine to change values of the game and "cheat" in it. If the game is server-sided, you'll have to either find an exploit in the game and use it, or gain access to the game server and changes datas/values for your account. But if you do that, you'll easily be busted and your account will get closed.

baby tokes - December 23, 2013, 7:03 am

The game does have multiple servers..it does not work using cheat engine..and I have no idea how I would continue on from here

Django - December 23, 2013, 7:05 am

(Dec 23, 2013 07:28 AM)Aur? Wrote: [\[CITE\]](#) People here usually crack Steam/Netflix accounts with Sentry MBA. That hasn't really helped me. I don't know where to get word lists, how to get configs, how to use the program itself, etc.

Aura - December 23, 2013, 7:14 am

(Dec 23, 2013 08:03 AM)baby tokes Wrote: [\[CITE\]](#) The game does have multiple servers..it does not work using cheat engine..and I have no idea how I would continue on from here

I just told you. If the game is server-sided, you'll have to either gain access to the game server and change datas/values manually (but you'll get caught for sure so forget it) or you find an exploit in the game and use it. No one here can really help you on that, because no one here is into video game hacking really. Sorry.

(Dec 23, 2013 08:05 AM)Mechanical Mage Wrote: [\[CITE\]](#) That hasn't really helped me. I don't know where to get word lists, how to get configs, how to use the program itself, etc.
Here, it wasn't that hard to do a simple search :

<https://hackforums.net/search.php?action=results&sid=272713dea89a7beb0e401b921d401ca9&sortby=lastpost&order=desc>

Password lists can easily be found on the Web or from HackForums in the Freebies and Giveaways section. Even in the Wireless Hacking section as people use them to crack WEP, WPA and WPA2 passwords for Wi-Fi Hacking. To get configs, click on the search result link I provided you, you'll see a bunch of thread of people giving away working Sentry MBA configs, if they don't work anymore, try another one or tweak it to make it work (update it).

About how to use the program :
<https://hackforums.net/showthread.php?tid=3566147&highlight=sentry+mba+tutorial>

It would be easier for you to read this tutorial then having me guide you around.
Is there anything else you still don't understand ?

aSmoo - December 23, 2013, 1:50 pm

One of the best way to hide your IP is to use a VPN or a Proxy (although VPNs are way more reliable). A VPN create a encrypted tunnel for your connection, making it more secure. If someone every tries to resolve your IP address, they will resolve the VPN's IP address and not yours.

When it comes to emails, you shouldn't really trust anything of this sort. Emails can be easily spoofed, and I could, for example, I could send an email to any given address from obama@fbi.gov.

However, it is not faked, you can email them back with an IP logger and say it is some of your work (something to get them to click on it). Here is a site that will help you get the person's IP and location:

<http://whatstheirip.com/>

mudasir007 - December 28, 2013, 4:30 am

(Dec 28, 2013 01:50 AM)Aur? Wrote: [\[CITE\]](#) I don't really get your question, sorry. You want to replace the binary service of a computer by the cmd.exe application ?can we tweak with registry by changing image that the service loads like Bitlocker service
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services

The name of each Services subkey is the name of the service, which is also the root of the name of the file from which the service is loaded. For example, for the serial mouse, the service name and Services subkey name is Sermouse. The file from which this is loaded is:

SystemRoot\SYSTEM32\DRIVERS\SERMOUSE.SYS.

All service names are defined under:

HKEY_LOCAL_MACHINE\SOFTWARE.

The names of the Windows NT built-in network services such as the Alerter and Browser services are defined under the Microsoft\Windows NT\CurrentVersion subkey in the Software area of the Registry

Goodies - December 28, 2013, 4:31 am

(Dec 28, 2013 03:49 AM)Gabrielix Wrote: [\[CITE\]](#) Sure.
What's a good way to bypass SELinux? You know, when it sets certain directories as non-executable, ie /tmp, /var/tmp/, and /dev/shm/, for example?
I don't follow.

I know there are a handfil of local exploits for SELinux... Are you asking how to execute something in a non-executable directory? I'm not sure I understand the question :/ sorry..

Vampiresa a - December 28, 2013, 8:04 am

So I'm having some issues with dark comment. I Had all my slaves last night but when i woke up this morning their are none. At this time of morning i have around 10 people online. I'm not sure if its an issue with DC Or their just all offline. My ports are open and im listening to them

Aura - December 28, 2013, 10:48 am

(Dec 28, 2013 05:30 AM)mudasir007 Wrote: [\[CITE\]](#) can we tweak with registry by changing image that the service loads like Bitlocker service
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services

The name of each Services subkey is the name of the service, which is also the root of the name of the file from which the service is loaded. For example, for the serial mouse, the service name and Services subkey name is Sermouse. The file from which this is loaded is:

SystemRoot\SYSTEM32\DRIVERS\SERMOUSE.SYS.

All service names are defined under:

HKEY_LOCAL_MACHINE\SOFTWARE.

The names of the Windows NT built-in network services such as the Alerter and Browser services are defined under the Microsoft\Windows NT\CurrentVersion subkey in the Software area of the Registry

Pretty sure it can be done, as companies and enterprises have different needs for their Windows computers, and not all of them uses the same services and processes. That's why the Windows 7 they install is via an "image", which means, a prepackaged Windows 7 with all the softwares and settings it needs to run to a level determined by this company or enterprise. But I couldn't give you an answer on how to do that. Also, it's not really hacking related, but mostly related to the functionality of Windows.

(Dec 28, 2013 09:04 AM)Vampiresa a Wrote: [CITE](#) So I'm having some issues with dark comment. I Had all my slaves last night but when i woke up this morning their are none. They are either offline.

They found the virus on their computer and removed it.

You didn't create a stub with a persistent start-up feature (from your RAT or your Crypter) and when they rebooted, the stub didn't reexecute.

SecAnonOps - December 30, 2013, 3:47 am

Can you make a tutorial how to phish? I would really appreciate it.

cyberzone5 - December 30, 2013, 3:54 am

Which is best keylogger available right now for free? It should be working good.

Slimy - December 30, 2013, 3:59 am

I have been looking for tutorials on how to deface sites, however I have been unsuccessful. Directing me to a guide or something would be much appreciated!

I haven't learned anything in a while and learning this would be an awesome thing to know, knowledge is awesome.

Kind regards,
-Avast™.

Aura - December 30, 2013, 4:52 am

(Dec 30, 2013 04:47 AM)SecAnonOps Wrote: [CITE](#) Can you make a tutorial how to phish? I would really appreciate it.

Phishing isn't allowed on HackForums, it falls under the Disallowed Black Hat Activities rule.

You can find all the rules in the [Help Docs](#) here :

We recommend you take the time to read the [HF Help Documents](#) section. The answer to your questions should be contained in there.

(Dec 30, 2013 04:54 AM)cyberzone5 Wrote: [CITE](#) Which is best keylogger available right now for free? It should be working good.

Project Neptune is the best you'll find on HackForums. There's a good detailed tutorial on how to set it up in the Premium Hacking Tutorial section.

rm -rf -R system32 - December 30, 2013, 5:07 am

Exploiting an Suid file to escalate privileges on Windows, is possible due to the runtime linker while LD_PRELOAD allows you to hijack function by creating a library dynamically.

Didn't know windows had suid bits and LD_PRELOAD

is that true?

PursDios - December 30, 2013, 5:49 am

How do i infect people on the same internet connection as me ? (since my no-ip doesn't seem work on computer connected to the same router/modem and such)

You want to infect people that are on your LAN ? ... That won't be effective a lot if your at home and on the same network as your mom, dad and sister ...

(Dec 30, 2013 07:52 AM)amos2421 Wrote: [\[CITE\]](#) ? get it in....im a beginner need serious tips..willing to learn from the best ?

We don't do mentoring, however, we can point you in the right direction to help you learn. But right now, what you're asking is too vague. Hacking is a big word that covers a lot of domains and branches. You have to be more precise, what exactly do you want to learn in hacking ?

PursDios - December 30, 2013, 12:38 pm

These are all related to different domains of Hacking, which mean you would have to learn different things in order to learn how to do everything you listed.

But let's cut the elements out already :

-Sreading RATs : All the methods are the same. You upload a Youtube video with an infected download link. You upload an infected Torrent. You send infected download links to people (even your friends), etc. In fact, to infect other people, you use the methods where you can get yourself infected, as simple as that.

-Botnets : When you'll have a good amount of slaves under your Command and Control Server (your RAT), then you can consider you have a nice little botnet. This refers to point number 1, RAT'ing.

-Bruteforcing : Sentry MBA, THC Hydra, Multiforce, etc. It's not that hard. You download one of these, you set it up with a password list, a proxy list and a config file (Sentry MBA requires one for exemple) then you launch the bruteforce and you wait either a few minutes, a few hours or a few years. It all depends of what you want to bruteforce.

-SQLi : Well, that's the first element that will actually require you to learn something. In order to do SQLi, you have to know your SQL in other words, you'll have to learn SQL. Why don't you install a local MySQL database on your computer and start messing with it ? You can easily find a guide on Google on how to set it up and from there learn SQL from scratch. When you're good enough, you'll learn by yourself how the queries you type can be used to get precious informations from website, and how a website works with a database.

-Defacement : You mean, hacking a website and change the main page so it shows "U g0t h4x0r3d by An0nym00s3 l33t" ? Learn Javascript that is used to do XSS. From there, you might be able to find a persistent XSS vulnerability and redirect to website to your defacing page. Or you could also shell the website, gain root access and edit manually the default page to add your deface code.

-DOXing : I just answered a guy about this here :

<https://hackforums.net/showthread.php?tid=3964670&pid=37364061#pid37364061>

Well, I hope it helped you.

2. What are sinkhole domains used for?

RootKits like the name says, he's a malware that will go install itself in the "root" of your computer, so everytime you start up your computer, it will start up as well. A RootKit have the ability to also install the primary malware in the start-up/boot of a computer and give it the "root" access (Admin Rights under Windows). RootKits are also used to hide the malware(s) they came with from Anti-Viruses and Anti-Malwares scans, but they'll often fail to protect them from full scan. Check out ZeroAccess, it's a pretty popular RootKit that install itself in the system folder of the Recycle Bin (it also installs itself elsewhere). A place where no one will think to look at. I just removed one from a member's computer about 5 minutes ago. A RAT is a Remote Administration Tool, it's different. HOWEVER. Features of RATs like start-up and persistence are in fact RootKits (you add them to the stub), because they will install the RAT on the root of the OS and execute it on every boot. I don't know the answer for your second question, sorry.

Swirl - December 31, 2013, 3:21 pm

(Dec 31, 2013 04:12 PM)Aur? I don't know the answer for your second question, sorry. Thanks for the answer, is rootkit a necessary plugin for andromeda?

Also my sinkhole question still stands.

Aura - December 31, 2013, 3:29 pm

(Dec 31, 2013 04:21 PM)Swirl Wrote: [\[CITE\]](#) Thanks for the answer, is rootkit a necessary plugin for andromeda?

Also my sinkhole question still stands.

Well if you want your stub to be executed everytime when your victim's open his computer, yes. But I don't know how Andromeda works. If it have a default RootKit process or no.

Swirl - December 31, 2013, 3:32 pm

(Dec 31, 2013 04:29 PM)Aur? Wrote: [\[CITE\]](#) Well if you want your stub to be executed everytime when your victim's open his computer, yes. But I don't know how Andromeda works. If it have a default RootKit process or no.

It does not. It is a plugin.
Just going to repeat this question again so people see it:
What is a sinkhole domain/how is it useful.

BloodGames - December 31, 2013, 3:35 pm

I need some really big help on acquiring my first Rat, and keylogger and perhaps someone who would be interested in showing me a booter after i got into some of the basics, Just trying to build from the ground up really.

Greedyswag - December 31, 2013, 3:36 pm

i got a txt file its like this

```
4628:user:password
4628:user:password
4628:user:password
4628:user:password
4628:user:password
4628:user:password
```

is there any chance of removeing the numbers and only have user:password

ty for helping <3

Aura - December 31, 2013, 3:38 pm

(Dec 31, 2013 04:32 PM)Swirl Wrote: [\[CITE\]](#) It does not. It is a plugin.
Just going to repeat this question again so people see it:
What is a sinkhole domain/how is it useful.
Then if you to cover your stub, you'll have to add it.

(Dec 31, 2013 04:35 PM)BloodGames Wrote: [\[CITE\]](#) I need some really big help on acquiring my first Rat, and keylogger and perhaps someone who would be interested in showing me a booter after i got into some of the basics, Just trying to build from the ground up really.

Okay so you're looking for a RAT, a Keylogger and a Booter to learn the basics ? These aren't the basics at all. Learning basic computing, OS, networking, website management, servers and a programming language are the basics.

(Dec 31, 2013 04:36 PM)Greedyswag Wrote: [\[CITE\]](#) i got a txt file its like this

```

I don't teach unfortunately, and I'm too busy with the Windows and White Hat Help section, along with IRL stuff for that sorry ?

But it's pretty simple. You should start by learning a programming language first. More simple to learn that by yourself then computing basics.

GreedySwag - December 31, 2013, 3:48 pm

heres the combo its goes all way to 75435 something i want to remove all the numbers that are

number:user:password
number:user:password
number:user:password
number:user:password
number:user:password

Do i really have to create a script for that?

Aura - December 31, 2013, 4:15 pm

Well, which path did you chose ? It will be easier to guide you if you tell us what you want to do exactly no ?

Co0lst0rybr0 - January 1, 2014, 8:18 pm

Is it possible to see who someone was skypeing?

My friend was skypeing with an arch nemesis of mine and I wanna know what their Skype name is to resolve them. Thanks.

Vile Soul - January 1, 2014, 8:18 pm

So I have access to a linux box, in my shell, i try to get the server to connect to my cat, the connection fails, but I can execute commands. How do i get server to talk back to me?

enjin1337 - January 1, 2014, 8:29 pm

[quote] Well, which path did you chose ? It will be easier to guide you if you tell us what you want to do exactly no ?

[/quote] first of all i thank you alot fot answering me. i chosed to be a blackhat as this is the path the others say " the most interesting with most benefits" i know it may be risky but ill chose this. well now im at the point i dont know where to start. some say i should learn languages , some say rats , some say keyloggers.

what would you think would be the best starting ? ive already got some decent knowledge , vpns , proxys , i was thinking about spreading methods ... how should i go on.

T0ucaNSaM - January 1, 2014, 8:42 pm

I have a question. Whenever you are hacking into a network would it be advised to do in order to covering your tracks.

BGodBilly - January 1, 2014, 8:45 pm

Not really "hacking" related, but I have a few questions for you guys.

How many of you use Tor/is it still safe to use?

Do you ever access the "deep web" or "darknet" with it?

Also, how can I stay more protected?

Here's what I'm doing now...

*VPN (Cryptic's & Royal) No logs (As far as I know)

*Tor

*In the process of spoofing my Mac Address

I'm not really looking into things that will get me into trouble or anything...just want to be on the safe side.

Thanks for your help, and great thread!

Also, I have a decent firewall and I use a KeyScrambler.

Thanks again!

(Jan 1, 2014 10:42 PM) Swirl Wrote: [\[CITE\]](#) Somebody tell me what a sinkhole domain is used for lol
When outbound requests from DNS is trying to access black listed domains, it controls the response to prevent the computer access to a malicious domain by spoofing the authoritative servers by returning a spoofed address that's not routable.

Vile Soul - January 1, 2014, 9:59 pm

YOLO - January 2, 2014, 1:20 am

Hello Hack Forums, I'm using Wireshark and the usual method of grabbing their IP from a Steam voice chat is not working, I've tried it on a couple of random people and a friend, all returned the same IP: 146.66....

I have the right device selected and remembered 'classicstun' in the filter, so any ideas about what my problem is?

Also does anyone know how to grab someone's IP from a game lobby such as MW2, I know it's possible with Cain on Xbox, but what about PC, I can't seem to find a tutorial on Cain for PC.

Purine - January 2, 2014, 1:23 am

I'm sorry but I still don't really understand.

Why is that something a botnet should have?

Aura - January 2, 2014, 10:47 am

Sorry I couldn't answer questions before. I had my hands full yesterday with the White Hat Help and Windows section. I'll try to answer every questions I can right now.

(Jan 1, 2014 09:18 PM)Co0lst0rybr0 Wrote: [\[CITE\]](#) Is it possible to see who someone was skyping?

My friend was skyping with an arch nemesis of mine and I wanna know what their Skype name is to resolve them. Thanks.

Well, you can't if you don't have access to their computer or Skype account with their Skype profile informations on your computer, that's for sure. You'll have to RAT him then steal his Skype %AppData% folder content, then import it on your computer, get his Skype password then connect to his account in order to see everything.

(Jan 1, 2014 09:18 PM)Cardio Wrote: [\[CITE\]](#) So I have access to a linux box, in my shell, i try to get the server to connect to my cat, the connection fails, but I can execute commands. How do i get server to talk back to me?

(Jan 1, 2014 09:29 PM)enjin1337 Wrote: [\[CITE\]](#) Quote: Well, which path did you chose ? It will be easier to guide you if you tell us what you want to do exactly no ?

first of all i thank you alot fot answering me. i chosed to be a blackhat as this is the path the others say " the most interesting with most benefits" i know it may be risky but ill chose this. well now im at the point i dont know where to start. some say i should learn languages , some say rats , some say keyloggers.

what would you think would be the best starting ? ive already got some decent knowledge , vpns , proxys , i was thinking about spreading methods ... how should i go on.

You should listen to the people that says to start with a language. It's the best way to get into hacking. You can learn about RATs and Keyloggers but later. You'll never learn anything if you just use these. What I suggest you to do is to learn about basic computing, networking, OS, servers, websites management, etc. and also a programming language. Otherwise, how do you want to learn how to hack something, when you don't know how that same thing works ? A hack is basically down at a backend level, at the source, the code. If you don't understand the code and what it does, the fonctionnality, you won't be able to hack it.

(Jan 1, 2014 09:42 PM)TOucaNSaM Wrote: [\[CITE\]](#) I have a question. Whenever you are hacking into a network would it be advised to do in order to covering your tracks.

If you hack into other people's home network, then I doubt they'll get back at you. Well, it depends of what you want to do with this network. You could just use a VPN and you would be fine. If you want even "more" security, you could create a Virtual Machine (VM), use a VPN, do your things from there, then when you're done, delete the VM.

(Jan 1, 2014 09:45 PM)BoRi Wrote: [\[CITE\]](#) Not really "hacking" related, but I have a few questions for you guys.

How many of you use Tor/is it still safe to use?

Do you ever access the "deep web" or "darknet" with it?

Also, how can I stay more protected?

Here's what I'm doing now...

*VPN (Cryptic's & Royal) No logs (As far as I know)

*Tor

*In the process of spoofing my Mac Address

I'm not really looking into things that will get me into trouble or anything...just want to be on the safe side.

Thanks for your help, and great thread!

Also, I have a decent firewall and I use a KeyScrambler.

Thanks again!

Tor is safe to use.

Yes, you have access to the "deepweb" with it. You could also have access to it with any other Firefox-based browser that are configured to connect to Tor's nodes.

Well, it depends by what you mean by "protected". Do you mean to not get traced back, stay anonymous ? Or are you talking about your computer protection and security ?

(Jan 1, 2014 10:01 PM)Purine Wrote: [\[CITE\]](#) I Do everything right its just when i poison it kicks me xbox offline and cant connect unless i unplug my ethernet cable from my router.

I think you might have messed up your setup. Which tutorial are you following for that ?

(Jan 1, 2014 10:10 PM)mrlake Wrote: [\[CITE\]](#) Where do I start?

I have no clue about networks, I'm a programmer... Can anyone point me in the right direction...? ?

You want to learn more about Networking ? If you want to learn more about simple Networking, Vinnie wrote a pretty nice tutorial covering the Networking Fundamentals, it's worth a read :

Thanks for your time :)

Don't use a Beginner Hacking Tool Pack. Using these tools isn't even hacking, it's called skidding. You'll learn nothing out of it, just how to click a couple of buttons, that's it. Also, these packs are most of the time either : infected, backdoored, contains useless tools, contains outdated tools, etc. To sum it up, they're useless. You want to learn and get into hacking ? See my reply to enjin1337 in this post.

Celay - January 2, 2014, 4:14 pm

Im still wondering if there is a answer to this

Quote:Hello,

so there is a german provider called "Kabel Deutschland" which offers a DDoS protection, I want to DDoS someone who uses this protection but im not sure how it works.

Some of his IP's 95.91.237.29 | 95.91.237.35 | 95.91.237.43 so there is one thing I can't even ping it with CMD and I dont know why.

It is a Home connection and as you can see a dynamic IP (I still always get his actual IP not an outdated one)

So I want to know how this protection works and what I can do against it.

thanks in advance

~Celay

Thanks in advance

~Celay

OTF NuNu - January 2, 2014, 4:17 pm

(Jan 2, 2014 05:14 PM)Celay Wrote: [\[CITE\]](#) Im still wondering if there is a answer to this

Thanks in advance

~Celay

A few ideas.

The person has blocked response from ICMP try instead to ping using UDP

No point in DDoS a person with a dynamic IP. All he need to do is to restart his modem and he got a new IP. Totally a waste of time, unless you have the power to knock out a few thousand IP:s

This post does not explain what kind of protection he has against DDoS

Celay - January 2, 2014, 5:15 pm

(Jan 2, 2014 05:40 PM)mad76e™ Wrote: [\[CITE\]](#) A few ideas.

Well i recommend Python. Its not the fastest language out there but it is the most hacker friendly language out there.. and its relative easy to understand

I got loads of links for you..

<http://www.sthurlow.com/python/>
<http://www.python.org/about/gettingstarted/>
<http://docs.python.org/2/tutorial/>

And on top that i will give you an PDF link

http://www.tutorialspoint.com/python/python_tutorial.pdf

Merry Christmas, Happy new year.. Yada yada ?

Deexav - January 2, 2014, 5:28 pm

What's the average output for an average botnet? (How many Gbp/s)

How strong must @DerpTrolling's botnet (or whatever they/he used) have been to take out LoL, Dota 2 and EA.com like they were nothing?

Will a simple booter (3Gbp/s) do something like that?

Mad76e - January 2, 2014, 5:31 pm

(Jan 2, 2014 06:15 PM)Celay Wrote: [\[CITE\]](#) I already DDoS'd him with UDP so I guess that won't make any difference but thanks, the thing with the dynamic IP is no problem since I can get his new IP very easy

Can you describe briefly how to DDoS your target? What programs or booter you use? I saw something about cmd and Ping, and i hate to misunderstand things!

The thing is, ping uses ICMP protocol but you can also ping with UDP so i saw that you tried to ping him before as i understand, but you got no reply. If the user knows what he is doing he can tell his firewall to block ICMP

The CMD is the Windows Command prompt, where you type in commands

Gooby-Pls - January 2, 2014, 5:31 pm

I cant answer that question to please you to 100% but normally you use a technique called DrDoS, what differs against a normal DDoS is that you reflect the traffic against a DNS which increase the impact on a site greatly

Perhaps a fellow comrade knows more about this

_Silky - January 2, 2014, 6:02 pm

Hi im new.

Is there any chance to use hacking tools on a mac? if not, what would be the best web based tools to resolve skypes, ddos, rat, dox ect.?

_Silky - January 3, 2014, 2:12 am

(Jan 3, 2014 01:31 AM)IVlatt Wrote: [\[CITE\]](#) Hi im new.

Is there any chance to use hacking tools on a mac? if not, what would be the best web based tools to resolve skypes, ddos, rat, dox ect.?

Run these commands...

Code ruby -e "\$(curl -fsSL https://raw.githubusercontent.com/Homebrew/homebrew/go/install)"

brew update

brew doctor

brew install metasploit

```
brew install nmap
brew install libdnet
brew install aircrack-ng
brew install dnsmasq
brew install exiftool
brew install ettercap
brew install dsniff
brew install hping
brew install arpoison
brew install stunnel
brew install siege
brew install reaver
brew install john
brew install hydra
brew install wget
brew install pyenv
brew install pyenv-virtualenv
```

Those are the most common using Homebrew, plus you can find plenty of tools on code.google.com

And of course there's Kismet, Nessus, Wireshark, just about every security tool on Linux, is compatible with a Mac..

(Jan 2, 2014 11:13 PM)DonecVisus Wrote: [\[CITE\]](#) Hacking has been a long term leisure interest of mine with much of my past experience being put towards messing with pc games.

Regardless, I'm not really sure where I should start. With no current goals, should I forge into code injection, password cracking, or something else entirely?

btw. New on this forum, thanks for the help. ?

Hacking is a very broad and diffuse field. It can be WEB-hacking, Hardware/Software hacking, pentesting, Wifi hacking etc. I suggest that you try a little of everything until you find something that you like, and then study that area. I see you got the programming bit, well that's good cos you got the foundation already.

When it comes to cracking games ets, were talking about those i like to call crackers.

A real cracker is not a hacker, but a hacker can also be a cracker:) depending on your skills for RE and stuff like that.

The NO.1 thing i use to tell ppl before running in to the hacking area is to have a basic knowledge of Networking and Linux. There are some really good books floating around on the web.. Also take

your time to read "Grey Hat Hacking" is a suggestion

I'm not aware of any bruteforcing programs for OS X. Multiforce might be OS X compatible, but I doubt. Also, you can easily find password lists on Google or on HackForums in the Freebies and Giveaways section. Some basic list posted have over 9 millions passwords.

XenceHD - January 3, 2014, 10:50 am

I would like to hack some users PW on www.Sjovt.com, its a retrohotel, and the log-in form, can you try as many PW as you want. I was thinking something like Brute force. Is it the best way, or is it a easier way?? I would like to do it completely free.

Thanks ..

Celay - January 3, 2014, 10:52 am

(Jan 2, 2014 06:31 PM)mad76e™ Wrote: [\[CITE\]](#) Can you describe briefly how to DDoS your target? What pograms or booter you use? I saw something about cmd and Ping, and i hate to misunderstand things!

The thing is, ping uses ICMP protocoll but you can also ping with UDP so i saw that you tried to ping him before as i understand, but you got no reply. If the user knows what he is doing he can tell his firewall to block ICMP

The CMD is the Windows Command prompt, where you type in commands
I ddos'd him with booters (Bigbang / Hyperstresser and and and) not CMD or LOIC/HOIC shit, tried it with UDP and Syn both didn't work.

Yes it's possible. You could use a bruteforcer like Sentry MBA that allows you to enter a specific config for the website and accounts you want to bruteforce in order to make it the most efficient possible. All you need is a password list, a proxy list (well, useless if you can try the password as many time as you want ?) and a config for Sentry MBA. Configs costs money if you don't want to make them, but it will cost you nothing if you create it yourself.

xSt0rmShad0w - January 3, 2014, 10:55 am

Hope someone can tell me how to do this, would be very cool!

If you have a problem with a Legion product, you should contact Anonymous to receive support, or any other members that are directly affiliated with that product and offer support. This might be a Legion thread, but we don't deal with problems and technical support of the products sold by Legion. Like I said, I would either send a PM to Anonymous about it or send an email to the # team.

How to make booter,ddoser,crypter,vpn? (I'am not sure if I'am telling correct thing)
I've seen that people make lot of money with them :3

BGodBilly - January 3, 2014, 2:32 pm

(Jan 2, 2014 11:47 AM)Aur? Wrote: [\[CITE\]](#) Tor is safe to use.
Yes, you have access to the "deepweb" with it. You could also have access to it with any other Firefox-based browser that are configured to connect to Tor's nodes.
Well, it depends by what you mean by "protected". Do you mean to not get traced back, stay anonymous ? Or are you talking about your computer protection and security ?
Thanks Aura,

Also, I was referring to staying anonymous & not getting traced back.

I saw your answer above, I may start using a VM as well.

You need coding knowledge and code it. (C++, .net etc)
About the VPN, you need a VPS or dedicated server to run your VPN Server on. (OpenVPN)
You can then connect to your VPN with the OpenVPN-GUI client.

Vasiljevic - January 3, 2014, 2:58 pm

HI!

Im a fresh noob at this... And this question may sound kind of stupid, but is it anyway i can get access to another computer by using any remote programs, or maybe pish out information from the computer using a keylogger or something similar?

Thanks! // Vasse

BTC mining is basically cracking hashes. It can be done by installing a CPU or GPU miner on your own computer or on a botnet or slave.

ebook? Social Magic made me alot, which went towards HF.

I recommend VB.NET or python as a language. You can review both sections here:

VB: [Software Development](#)

Python: <https://hackforums.net/forumdisplay.php?fid=129>

Deeup511 - January 3, 2014, 10:30 pm

I've been wanting to learn SQLi. I understand XSS and I program in a few languages. I've seen

tutorials on SQLi but I don't understand shit about them. They get really complicated and start adding numbers. I also see that these is different types of SQLi so this makes it even more overwhelming to learn them all. I've tried going to the SQLi section and solving challenges but I don't really know what i'm doing and haven't solved any of them.

What should I do?

Understalker are correct

If it is a real static IP you have some choices.

If you got IP, you can also get a Skype name, with that skype name you can search after posts in different forums that contains that Skype name etc, Yeah were talking about doxing

You got the IP, you can always scan the computer after open ports and vulnerabilities and hack in to that computer

DDoS comes to mind..

However a combo of an IP and open ports a lethal combination, especially for a pentester

Understalker - January 4, 2014, 2:29 am

Hydra works fine.

DuBrute works perfectly for RDP cracking as well.

I wouldn't recommend bruteforcing though. If you have a password like, LolPassword123 it will be pretty hard to get into via Bruteforce.

Nebz12 - January 4, 2014, 2:33 am

He means a program like nMAP. It scans for open ports and more shit.

No problem, I'm here for that.

I would recommend a keylogger/RAT.

If you need help setting up a RAT go to my signature.

Mad76e - January 4, 2014, 3:13 am

(Jan 4, 2014 03:33 AM)Nebz12 Wrote: [\[CITE\]](#) How do you exactly "scan the computer after open ports and vulnerabilities and hack in to that computer"

Well you use a portscanner that scans the target computer for open ports. if you have an service running on a computer you also has some ports open for communication.

Example: http port 80, FTP port 21, SSH port 22 and so on (It does not have to be FTP on port 21 Your target can change the port if he want to, and run something else on that port)

After you find an open port, you have to discover what services that's running on that port..

Example: Is it an old outdated FTP server running, or perhaps an old µTorrent client there might be some vuln to get access to his computer

Example of programs associating with this type of hacking = nmap and metasploit

So the shortest way to describe this is (a very short answer to that) "scanning, exploiting and deliver a payload,"

gaingaillo - January 4, 2014, 4:42 am

1- Could you link me a safe version of darkcomet, and provide me some proofs that it is safe?.

I'm already installing a VM, what steps should i take to make sure a file is clean? for example a darkcomet one? I know i should use sandboxie but what should li look for?

2- I saw some free Crypters calling to be FUD in the free section. Looks promising. How much should i trust those to be clean, from 0 to 100%?

3- Could you please suggest me a good\ a phew good websites where i can upload my Rat and have people easily direct download it without chrome telling them it could be bad or these kind of things?

Thank you in advance

1. I believe you can download it from the official website [CLICK](#) or use the search function for an older version.

2. There are some free crypters but the FUD time won't be long compared to a paid crypter. I have no idea about them being clean or not as I never used them.

3. Take a look at this thread: <https://hackforums.net/showthread.php?tid=3003424>

Leland22 - January 4, 2014, 9:23 am

Could you provide a link to social magic ebook?

Edit

Found it, does it offer refunds?

RidiculousBeans - January 4, 2014, 9:34 am

Hey there,

I am completely new to 'hacking' or pen testing.

I tried things like SQL Injecting and what not before but it never worked. I tried different softwares but they actually were infected with a remote access executables.

I still want to learn and try.

Where should I start? :)

Thank you.

Acroz - January 4, 2014, 9:43 am

Hacking is a very broad and diffuse field. It can be WEB-hacking, Hardware/Software hacking, pentesting. Which area are you interested in?

Acroz - January 4, 2014, 4:27 pm

Still looking to help people, just post your questions ?

a9ine - January 4, 2014, 4:38 pm

I have a very good keylogger, but when I send out my servers and they login from a different location I am prompted by gmail that I have to change my password and I end up losing all my victims. I have tried other major email providers but the same thing happens. Is there any way to prevent this? and if not what's a good ftp provider that I can use. Thanks for any suggestion.

Kuzoh - January 4, 2014, 5:06 pm

Are you able to use SQL Injection on a Mac? Thanks.

ghillieXpwnz - January 4, 2014, 5:10 pm

how do i start e whoring? im not sure i have a pack but how do i get people to buy it is that what im supposed to be doing?

Your goal, if i understand correctly, is to visit adult/dating chat rooms and lure men via cams (called VCW or something similar) and get them to pay via paypal, btc, etc.

I'm not the person to answer this though.

ghillieXpwnz - January 4, 2014, 5:16 pm

can you give me list of chat rooms maybe?

AnonGamer - January 5, 2014, 7:15 am

So im like the noobiest on this kind of stuff, so my question is I wanna get in hacking but I first wanna know what does hacking contain and with what could I possibly start
could anyone help me out?

XenceHD - January 5, 2014, 7:49 am

(Jan 3, 2014 11:53 AM)Aur? Wrote: [\[CITE\]](#) Yes it's possible. You could use a bruteforcer like Sentry MBA that allows you to enter a specific config for the website and accounts you want to bruteforce in order to make it the most efficient possible. All you need is a password list, a proxy list (well, useless if you can try the password as many time as you want ?) and a config for Sentry MBA. Configs costs money if you don't want to make them, but it will cost you nothing if you create it yourself.

Do you got any tut how to make a config to a retro hotel??

Mad76e - January 5, 2014, 7:56 am

The NO.1 thing i use to tell ppl before running in to the hacking area is to have a basic knowledge of Networking and Linux. There are some really good books floating around on the web.. Also take your time to read "Grey Hat Hacking" is a suggestion. I'm afraid that there's no shortcut to this my friend, you have to read a lot of books. You should also take your time to learn some programming

Hacking is = "to have a knowledge how networking and program works together, and how to take advantage of that knowledge" or "manipulate programs and networks to exploit their weaknesses to your favor"

Real hacking is not as flashy as it is in the movies, nor as easy. You have to use your brain! and

Noo, we don't have like 1000 empty bottles of jolt, or takeaway food leftovers at our desk! and some of us has girlfriends and wives.. There a lot of youths doing this (14-16) but also some real old foxes (25+)

(Jan 5, 2014 08:49 AM)XenceHD Wrote: [\[CITE\]](#) Do you got any tut how to make a config to a retro hotel??

The same person you was trying to hack can actually be helpful (the owner to that hotel), if you first apologize to him and then ask how to do it?

I have attempted to develop a function that can reserve a linked-list is this what it should look like? (C++)

```
void reverselist
{
    if(head==0)
        return;
    if(head->next==0)
        return;
    if(head->next==tail)
    {
        head->next = 0;
        tail->next = head;
    }
    else
    {
        node* pre = head;
        node* cur = head->next;
        node* curnext = cur->next;
        head->next = 0;
        cur-> next = head;

        for(; curnext!=0; )
        {
            cur->next = pre;
            pre = cur;
            cur = curnext;
            curnext = curnext->next;
        }

        curnext->next = cur;
    }
}
```

Sluni - January 5, 2014, 8:46 am

As most of you know. Gmail and yahoo email accounts (not sure about hotmail) now have an extra layer of security.

If you try to sign into an account with correct infomation an error will appear saying your computer is 'not verified'. So a code must be sent to a backup email or you must answer a security question. Both of which you would be unlikely to have.

It doesn't seem to matter if your ip is in the same country. Google wants to verify your device (or ip?) To add to this an email is automatically sent to the victims email which says:

Quote:Someone recently used your password to try to sign in to your Google Account example@gmail.com. This person was using an application such as an email client or mobile device.

We prevented the sign-in attempt in case this was a hijacker trying to access your account. Please review the details of the sign-in attempt:

Friday, January 1, 2014 11:47:23 PM UTC

IP Address: 177.16.55.23

Location: Foz do Iguaçu - Parana, Brazil

If you do not recognize this sign-in attempt, someone else might be trying to access your account. You should sign in to your account and reset your password immediately.

This alerts them to your presence and they will change the password.

It seems as though the only way to access their emails would be through a rat by:

- A. Using their ip as a proxy.
- B. Controlling their pc manually

Is this correct? Any advice or suggestions would be great.

Does Google verify email ownership through ip or actual device?

shaant00 - January 5, 2014, 8:48 am

As far as I know they verify it based on location/IP. The easiest would be to use a rat like you

mentioned and use their IP as a proxy. Not sure if you can let your victim open the rat though.

Okay, so I am going to tell you guys what I want to do and hopefully you guys can tell me if its possible, and if it is, how to do it.

So there is this forum for game a play and inside the forum is a thread where people link pictures of there things in-game to show off and what not.

I wanted to go in there, and post a link, and when they visit the link for my RAT to be put on their computer.

I think this would be using a Java drive by, but I am really unsure.

I was also going to spoof my server and make it look like a jpeg, but they will have to download it and I feel like they will find that very suspicious..

So is this possible and if so how?

Jamesman - January 5, 2014, 2:12 pm

Hello this is my first post, i'm a big n00b at hacking, but recently I had a bad experience with a faker on a dating site and I want to find out who he really is. Would it be possible to hack his profile and find out what his password is?

Mad76e - January 6, 2014, 8:45 am

(Jan 5, 2014 03:12 PM)Jamesman Wrote: [\[CITE\]](#) Hello this is my first post, i'm a big n00b at hacking, but recently I had a bad experience with a faker on a dating site and I want to find out who he really is. Would it be possible to hack his profile and find out what his password is?

Theoretically, yes! But why do you want to hack him/her? Isn't it more satisfying to dox him? To know who he/she really is?

Resolve his/her skype, google his/her skype name or googling his Dating name is one of the first things you should try. There's some other ways to track ppl that you can try, but that's more like "black hat activity" and prohibited in HF to do or talk about.

crazy112 - January 6, 2014, 8:48 am

Hi sir :).

Do you can help me with sql or more... I wanna cpanel on one game. :) WAP game (mobile phone) Thx.

Jamesman - January 6, 2014, 10:32 am

Yeah that is what I actually want to find out, I already found his IP via steam and sorta found where he lives, but those ip geo things are not 100% accurate. Googling his username and the fake name he gave me doesn't give anything, I am interested in this black hat thing but I guess if it's prohibited I should look into it myself.

Thank you anyway :)

You want help with SQL? What about it?

Your communication is a bit off. You wanna "cpanel" a game? As in make a control panel for it?

Zarkopafilis - January 6, 2014, 11:34 pm

I want to start hacking . I am an experienced programmer and have a dual booted box /w kali linux/win7 . Where would you suggest me to start?

TheBoomBrigade - January 7, 2014, 12:10 am

Due to the fact that nobody replied to my question, I am going to re-post it because it has been a

while.

I have attempted to develop a function that can reverse a linked-list is this what it should look like?
(C++)

```
void reverselist
{
    if(head==0)
        return;
    if(head->next==0)
        return;
    if(head->next==tail)
    {
        head->next = 0;
        tail->next = head;
    }
    else
    {
        node* pre = head;
        node* cur = head->next;
        node* curnext = cur->next;
        head->next = 0;
        cur-> next = head;

        for(; curnext!=0; )
        {
            cur->next = pre;
            pre = cur;
            cur = curnext;
            curnext = curnext->next;
        }

        curnext->next = cur;
    }
}
```

mudasir007 - January 7, 2014, 2:03 am

What is dll injection, what is the real difference between dll and exe file, How it works in windows?

Chief Keef™ - January 7, 2014, 2:54 am

1. Could you test my RAT?
2. Is there such thing as a free fud crypter?

fellan12 - January 7, 2014, 3:01 am

Do you have to use a crypter on a keylogger? and if so do you have any recommendations on crypters?

The keylogger I'm using is syslogger. If there is a keylogger which is better, feel free to tell me with a crypter that works for it :)

Acroz - January 7, 2014, 3:02 am

(Jan 7, 2014 12:34 AM) Zarkopafilis Wrote: [CITE](#) I want to start hacking . I am an experienced programmer and have a dual booted box /w kali linux/win7 . Where would you suggest me to start?

You may wanna learn the basics like security and sql.

(Jan 7, 2014 03:54 AM)Rukkus Wrote: [\[CITE\]](#) 1. Could you test my RAT?

2. Is there such thing as a free fud crypter?

1. No sorry, look in free giveaways, people give slaves.

2. Yes, but they dont stay FUD long.

(Jan 7, 2014 04:01 AM)fellan12 Wrote: [\[CITE\]](#) Do you have to use a crypter on a keylogger? and if so do you have any recomendations om crypters?

The keylogger im using is syslogger. If there is a keylogger which is better, feel free to tell me with a crypter that works for it :)

Well, if you use a keylogger, it'd only make sense to FUD/Crypt it to avoid detection. Some people crypt your stub for \$2-3 so it's not a big investment. ?

fellan12 - January 7, 2014, 3:06 am

But is there a crypter thats works for keylogger and RAT

Acroz - January 7, 2014, 3:07 am

(Jan 7, 2014 04:06 AM)fellan12 Wrote: [\[CITE\]](#) But is there a crypter thats works for keylogger and RAT

Yes of course. Just look in the encryption market.

fellan12 - January 7, 2014, 3:08 am

Will check it out now! Thanks mate for the fast response! :)

Aura - January 7, 2014, 3:50 am

Bo Burnham. - January 7, 2014, 6:07 am

I made a thread asking about this but didn't get much attention.. ?

Anyway, you guys might be able to help me?

So, i'm thinking of doing something else than gaming/skid around. What route should i go to become the "hacker" i want to be? I want to fuck with people and mainly piss everybody off, by my own methods and not by paying for services.

My knowledge as of right now: Basic HTML

VERY Basic Python

RAT-(By using public/paid software)

Basic Botnet building

WoW/Habbo private server "experience"

Where to start? Where to go after that? What language did you start off with?

Thanks and sorry for the long post.?

TheBoomBrigade - January 7, 2014, 8:01 am

Even though I'm not Legion Support, I'll try my best to help you.

If you're looking to cause trouble, make sure you're not violating any of the disallowed blackhat activity under the Help section.

I can't really see pissing people off as a main goal but heck if that's what you get your kicks from go right ahead.

A coding language I would recommend would be python. I do a little bit of it myself here and there, but since python is becoming more and more popular these days and is the easiest to learn, I would suggest that's a place to start. There are a lot of "hacking tutorials in the Hacks, Exploits, and Various Discussions section. Becoming a "hacker" can be a grueling task and it takes time to learn. Just like you can't learn astro-physics over the night.

What is your opinion on the best free VPN? Something secure yah know?

And also how to get the most anonymity (not sure if thats how it is spelled), using vpns, proxies, etc. I wasn't sure if there was a good place to get proxies that are actually secure (not looking to pay for one just yet) and wasn't sure if it was good or not to chain the proxies. I am still trying to figure out how to setup a paypal account correctly so it is not easily traced back and still not having any luck with that (noone has answered by question in the hack section) and once I start making money I'll begin buying a VPN and proxies (maybe). Not sure where to find good tutorials on proxies and where to get them, how to setup them correctly for the most security, etc.

?ain - January 7, 2014, 10:25 pm

Could you point me to a tut on how to root servers?

And crack RDPs? I need both, actually.

Acroz - January 8, 2014, 9:22 pm

Nothing free is secure. You have to pay for a good one.

If you need elite proxies, just PM me ?

kellertreppe - January 9, 2014, 4:42 am

Hi Guys in the age of 2014 more and more people getting to know how to ddos some ones home connection or and especially in gaming sections for example css servers. Cause of annoying people online using their aimbots or any other shit, sometimes just for the lulz.

So when ur playing on a game server and some tard shows up defining himself as a troll and 2 minutes he takes down the server for 20 minutes and i need to find a new good/fun one.

these circumstances are annoying me like fuck.

I read about ddos a bit now, still not knowing much :P.

I dont want to spent retarded money on these Booter/Ddos sites like ddosit.us or french crap, cause i think its rly not that hard to learn how to ddos and setting up a bot. the hard thing for me seems to

get a decent amount of bots.

An other variant of ddosing i heard of was smth like a dns amplification attack where u send an request (as i understood) with ur IP to the DNS and tell them to send the request to the IP u want to ddos. (i hope this was right)

Well now to come clean:

I want to learn to build a botnet and to operate it, to learn about crypting a bot, ddos methods chargen,bla bla bla,layer 5 7 ...

and maybe about dns amplification.

I am a nice Person willing to give "Legion" smth back.

I dont know what yet but i am sure i can.

My englanderino suckind dicko numero uno in world i has germany.

"Is it a failure"? Could you please expand on what you define as a failure?

Sm1th???? - January 9, 2014, 2:31 pm

(Jan 9, 2014 12:42 PM)Marxo Wrote: [\[CITE\]](#) Is it a failure to listen to music in Spotify with my real Account (logged in facebook) while using my VPN?

Not really. It depends on what you are doing on your VPN.

What I usually do, is use one of my VPN's servers for doing all of my regular things, (listening on spotify etc.) and when I do sketchy things, I log out of everything and hop servers.

You can listen to spotify, but I would recommend logging out for 5-20m out of all "real" accounts on your VPN if you are going to do anything illegal which could be bad enough where you would potentially be tracked down.

EDIT: You can also just make fake accounts for everything and ONLY visit them on your VPN.

Niggz - January 9, 2014, 2:34 pm

P.s: sorry for my bad english

You download a keylogger and create an infected file with it, which should be saved to your computer. You will then send the victim the SpyWare, and tell them to open it up.

Beefmaster - January 9, 2014, 4:54 pm

i have a question about ratting, how do u get it past the gmail virus scan it all ways picks my rat even when i encrypt it and can any one recommend a webhosting and vpns. and i wont be using the webhosting for phising i just have to say that because i got banned last time i asked about webhosting

Understalker - January 9, 2014, 8:01 pm

Mad76e - January 10, 2014, 4:23 am

(Jan 9, 2014 03:38 PM)Sornarok Wrote: [\[CITE\]](#) Hello,

I have done research on hacking and I am looking for someone who has hands on experience to teach me how to hack and I will do almost anything for that to happen.

Thank you,

SornarokWell i cant be your teacher.. But here are some things to consider..

First decide on what type of hacking you want to do, You cant do all of them at the same time and expect that you will be good at that.. You will be at most an average kid

I have chosen four areas of hacking. WiFi, Pentesting, Dox and SE They go in a way, hand in hand. Now you have to start by reading a couple of books, Read tuts available on this forum and use google a LOT. Here at this forum you have to show your hand, that is not just talk, write tuts about things you know, and do not copy anyone.

Do not trust everyone, make your own opinion. Google, google and google. I walked in to a self-made trap once (Modified Packet Replay attack) and i learned my lesson.

The most important thing..

make en LAB-test-lan @ home (WM-machines are ok) and test the things you learned. Dispose bad ideas through trial and error.

The last thing.. Try to get in to a group (hacking group) you will learn a lot if you wish to, but you must have something to prove you're worthy. To buy a L33T will help you in a way cos you show that you're about to take this seriously.

mudasir007 - January 10, 2014, 4:45 am

How would you inject handwritten assembly code into windows process without using Dll injection or Executable

Terry A. Davis - January 10, 2014, 5:05 am

(Jan 10, 2014 05:45 AM)mudasir007 Wrote: [\[CITE\]](#) How would you inject handwritten assembly code into windows process without using Dll injection or Executable

Without execution in anyway you can't do it.

mudasir007 - January 10, 2014, 5:15 am

i think we can inject assembly code into process memory and then have over instruction pointer point to it and run it correct me if i am wrong and i don't know how to do it

Bouwvakker2 - January 10, 2014, 1:25 pm

(Jan 9, 2014 04:24 PM)SIOW Wrote: [\[CITE\]](#) You download a keylogger and create an infected file with it, which should be saved to your computer. You will then send the victim the SpyWare, and tell them to open it up.

Oké. Thanks a lot! This really helped me.

Well Im also here a couple of hours.. and thanks for all PM:s :)

ForIN - January 11, 2014, 6:29 pm

I've got a question about RAT's.

Say you're using a VPN w/ DarkComet. You've portforwarded the common DarkComet port. Now you're on a shared IP with other clients of the VPN you're using. If they were listening on xxx port and were sharing the same IP address as you, and using Darkcomet, would they see the slaves you've infected? Would you see their slaves as well?

Sm1th???? - January 11, 2014, 8:45 pm

Ports can not be binded twice on the same network and when you forward a port on your VPN it forwards it to YOUR internal IP adress, or simply your computer.

(Jan 11, 2014 09:45 PM)MrxxMrsSmith Wrote: [\[CITE\]](#) Ports can not be binded twice on the same network and when you forward a port on your VPN it forwards it to YOUR internal IP adress, or simply your computer.

Ahh, Understood. Thanks! I was getting all these slaves and I had only spread my server to a few. I just thought "maybe it could be this". Hmm

Edit: Are you sure that's not possible? I'm looking through these slaves and all the server locations are in different locations. +Some of these slaves have been infected since earlier last year. Oh and even better, It's connecting to other no-ip's that are forwarding to the IP my VPN is using. So I am 100% sure these aren't my slaves I'm seeing.

This is when I set the client to view without the servers password.

rdbllnfr - January 12, 2014, 3:53 am

Hey, I've got a question.

Ive made a darkcomet server linked to my no-ip url. Then i've crypted it with cube crypter and it's FUD. I wanted to test it on my girlfriends pc. But it doesn't show up. Is it because we are both in the same network? Should i use my local ip instead of the no-ip url when i want to test it on a computer in my local network?

Pain - January 12, 2014, 6:06 am

Can you please help me hack this gmail?

yohanda - January 12, 2014, 6:11 am

is there any such things as an email viewer or something ? i need access to a certain email account, but i dont want to phish, keylogg, or bruteforce, anything else that i can do ?

This is when I set the client to view without the servers password.

Just wondering, what VPN are you using? When you forwarded the port, did you have to log on to your account, or do you just add the port and it is automatically forwarded?

If you don't have to forward the port on your account specifically, then generate a random port:

<http://www.random.org/integers/?num=100&min=1&max=9999&col=5&base=10&format=html&rnd=new>

Build a new server with this, and set a on connect to update the server with the new one. Then leave your client on for while.

Listen to the new port and wala you have all of your slaves plus some of others.

You should use your localhost IP or 127.0.0.1 and run it on a VM on your computer. It varies on if your router supports an IP redirect back to itself if you are using your own external IP.

I am trying bruteforcing thru' fireforce addon,but it seems this addon doesnt have huge capacity for passwords .txt files...i have got one 683MB password .txt file...and when i load dat dictionary in the

fireforce addon...it just hangs out!...(

I wanted to know whether there is any way to increase fireforce addon size for handling large password(dictionary) files OR any good alternative for fireforce addon.

Thanks

Help me up plz...

Deeup511 - January 16, 2014, 6:19 am

Hmmm How can you enter the database of for example a game?

Do you need some expecific software?

How easy is it to be done?

When DDoSing a website,you can get a website shutted down but if you try another one that another one won't shutdown does it have the due with the DDoS tool or does it have to do with the website protection?

Thanks for the attention provided.

Fluxify - January 16, 2014, 6:47 am

Thanks for the attention provided.

You can start learning SQLi injection and you may be able to get into a database.

About the ddosing part, its most likely the ddos protection of the website that your attacking.

1. They could have an anti-virus.
2. You could have set it up wrongly.. To check if your ports are open (Your ISP could have blocked them). To check if your ISP has blocked your ports, go to <http://www.canyouseeme.org/> and enter in the port that you are port forwarding and if it says "I can see you", your ISP has not blocked your ports.. But if it gives you an error, it could be that your ISP has blocked your port.
3. If it does say it can see you, check if you set up no-ip properly as you could have set it up wrong.

If those do not help you then feel free to contact me via private message and I'll trouble-shoot the problems with you!

Kuzoh - January 21, 2014, 5:37 pm

If I DDoS a website, will they be able to track me? If so, how can I stop them from finding me? I'm a bit paranoid. :P

Edit: I'm on a mac

Horde - January 21, 2014, 7:01 pm

(Jan 21, 2014 06:37 PM)Kuzoh Wrote: [\[CITE\]](#) If I DDoS a website, will they be able to track me? If so, how can I stop them from finding me? I'm a bit paranoid. :P

Edit: I'm on a mac

If your using a program such as LOIC, they can track you. If your using a net or some of these paid booters found on the marketplace + a vpn, it increases your anonymity on the internet, but if they want to pursue you after you ddos them and take matters to feds (depending if its a website such as a minecraft servers, most likely will laugh them off) if you attack a large site, theres always some way they will find you.

Seth827 - January 21, 2014, 8:27 pm

i have a mac book that runs on mac os x 10.5.8. i want to upgrade to snow leopard but dont want to buy the software. i was wondering if anyone knows how to get it for free and how to install it. i know you can burn it to a dvd or a usb but the usb i have is a 16gb san disk secure access usb but i dont know how to get around the secure access software and the only dvds i have are 4.7gb dvds and the snow leopard software is over 6 gb. is there anyone who can help me please and guide me through it i can seem to figure it out on my own. so please guys help me out it would be greatly appreciated.

To bypass banned websites and downloading zip-files...

You can use online proxies like Hidemyass...

You can also find the IP address of the site (if it is on a dedicated server), and access it from there too...

For bypassing the software installation...

I would need to know which OS you are using...

Can you please provide that information???

HydraPlane - March 2, 2014, 12:36 am

(Mar 2, 2014 01:31 AM)sml555 Wrote: [\[CITE\]](#) To bypass banned websites and downloading zip-files...

I would like to clarify that the websites are being blocked by the network security policy (IT department) not the ISP. So will using a proxy work?

The PC is running Win XP 2002 Service Pack 3.

Thanks for helping me out BTW.

sml555 - March 2, 2014, 3:38 am

Yeah...

They should still work...

I already bypassed mine before...

;))

But if it doesnt...

let me know...

Ill try to figure something out...

:)

As for the PC...

You can try to override your system using something like metasploit...

This would get you admin access if you can do it successfully...

I haven't really done this kind of work for installations...

but theoretically...

It would make you GOD on that system...

and you could do whatever you wanted on it...

:)

Hope it helped...

Let me know if I can help you in any other way...

blackpwnzz - March 2, 2014, 4:12 am

thank you for making this thread:

what are the basics of hacking i have to learn at first?

because i dont know how to get startet.

sml555 - March 2, 2014, 4:44 am

(Mar 2, 2014 05:12 AM)blackpwnzz Wrote: [\[CITE\]](#) thank you for making this thread:

because i dont know how to get startet.

Well...

You can start learning some programming languages like HTML, CSS and PHP...

It's to get an understanding about how things work...

However, if you intend on being a script kiddie...

You can learn SQLi, XSS, LFI, and RFI, at a very basic level, and also use tools to exploit them (highly inadvisable)...

Hope it helped...

Let me know if you have any other questions...

:)

sherzod33 - March 2, 2014, 7:31 am

i set up my dark comet rat and my port forwarding. Then when i infected my own computer, it didnt show up in the users tab. I though it wouldnt work on my own so I tried it on other pc in my house. still I cant the the slaves. I followed every instruction on setting up the rat. my firewall is off and still i dont see any slaves. What can be the cause?

If you can help me out then it would be greatly appreciated.

Make sure you have No-IP open while you're testing. Also make sure the port is open on your router and it's listening on DarkComet. Lastly make sure your server is set up fully and correctly.

But this is only for testing, you can not infect any other users with this Server, because it will not show up. I suggest you just try it on something like a Virtual Machine, to save you some hassle.

Sunnypay - March 2, 2014, 9:00 am

Hey guys. I'm fairly new to this but i've done skid stuff like dosing, doxing, keylogging, etc. But what I really want to get into is website hacking and exploiting. Now my question is with the SQL and such. Which should I start with? Is it possible to learn all at once? And Is it good to have a few programming languages under my belt first?

Acroz - March 2, 2014, 9:04 am

I thought so too, and I went to check the help documents, and couldn't find it under "Disallowed Blackhat Activity".
I'm not sure.

NROL-39 - March 2, 2014, 1:16 pm

Hello and thank you for making this help desk available. I have a question, or in other words seek advice. I would like to create a honeypot on my home network that is isolated from my internal network, I was thinking of creating a virtual honeynet and then giving it access to the web to attract web traffic. I would like to do this for the sole purpose of learning how to analyze the data and malicious hacker behaviors, to get an idea of what their agenda is once they get in a network, this is for learning purposes only and I want to remain protected myself, but have all the log activity files dump into a database server in which I can access and view remotely if need be. What do you recommend to start? Do you have any information or web pages, how to guides you can offer? I just bought a Sonicwall TZ100 firewall/router because my old Linksys Router is a paper tiger and would not be able to hold up against a homemade honeypot. Do you have any advice in how i could set up a honey pot and what i should be using (as far as OS's and software) to make this work? Any help or advice would be greatly appreciated. Thank you.

CrypticX - March 2, 2014, 2:29 pm

Is it possible to dox someone with an ip adress? If yes, how?
What is swating? When can it be legal or illegal?

Why would people dox or swat someone?

Zabuza? - March 2, 2014, 5:53 pm

(Mar 2, 2014 03:29 PM)Str8ballin Wrote: [\[CITE\]](#) Is it possible to dox someone with an ip adress? If yes, how?

Why would people dox or swat someone?

Yes, it is possible. One way to do that would be if they have Skype, you can use a feature some Skype resolvers have where you simply input their IP and you'll get their Skype name. Add them, look at their username, and gather as much info as possible on them. Continue on by looking for accounts with their username.

SWATing is when you call the police in someone's area, give them your victim's address, and call in a hostage situation. If it's done right the SWAT will come. And yes, it is extremely illegal.

People DOX and SWAT people because they dislike them, want revenge, etc.

Hope I helped.

Someone posted that on another helpdesk and was curious if you guys could answer it
Since its ring topology...
You can actually drop any system off the network, and it would wreck the topology path. Since you have access in the network, you can scan the systems with nmap, and find open ports...
Then use metasploit to take them over...
Then, your GOD on the system...
Kill them in whichever way you wish...
:)

Goodies - March 2, 2014, 11:39 pm

Does K0FIN encode ASM shellcode? I'm interested in that... If not, no This is worries.

HydraPlane - March 2, 2014, 11:56 pm

(Mar 2, 2014 04:38 AM)sml555 Wrote: [\[CITE\]](#) Yeah...
They should still work...
I already bypassed mine before...
;)
But if it doesnt...
let me know...
Ill try to figure something out...
:)

As for the PC...
You can try to override your system using something like metasploit...
This would get you admin access if you can do it successfully...
I haven't really done this kind of work for installations...
but theoretically...
It would make you GOD on that system...
and you could do whatever you wanted on it...
:)

Hope it helped...
Let me know if I can help you in any other way...
Thanks for the pointers but unfortunately, I checked out Hidemyass and used two of the listed proxies and still image hosting sites like photobucket as well as many other sites which are blocked by the system policy are inaccessible.

Do you recommend booting metasploit from a USB? Since I can't really install it on the system because I lack the necessary privileges.

Pick up a language(Depends on the hacking really) become good at it, then try and learn "hacking"

Websites: PHP, JS, SQL

Computers: Python/Perl, C, and ASM(NASM, FASM, MASM whatever you want)

^You dont HAVE to use those, well, ASM should be a must

Sunnypay - March 3, 2014, 1:07 pm

Which is better, buying a booter or getting a botnet for ddosing.

CrypticX - March 3, 2014, 1:40 pm

(Mar 3, 2014 01:42 PM)Nela Wrote: [\[CITE\]](#) Pick up a language(Depends on the hacking really) become good at it, then try and learn "hacking"

Yes, for anything low level at least(Buffer overflows, evading ASLR, or DEP using ret2reg, ret2libc

and ROP)

When you use GDB to debug and look through, you won't understand what you're really looking at. C would help too, for example:

PHP Code

```
<?php
#include <stdio.h>
int main(int argc, char **argv)
{
    char buf[8];
    gets(buf);
    printf("%s\n", buf);
    return 0;
}
```

The gets() function is exploitable, because the function doesn't check the parameter lengths, so it doesn't know what the length of the buffer will be.

```
root@cofe~#gcc test.c -o test
root@cofe~#./test
AAAAAA
Segmentation Fault
root@cofe~#
```

Entering more than 8 characters yields a segmentation fault.

Alternatively we can use the safe version of gets() by using fgets().

BlackEyz - March 3, 2014, 4:48 pm

Hi Legion, I just registered on this site..

I wanna learn more about the word "hacking" and what it really means, I see all theese shortcommands "Language", "ASM", "Rat FUD" etc etc.

My question really is though, how did you guys started with hacking?
What websites can you use to read about the differences and deeper knowledge about hacking?
And what should I do to get into this?

Thank you!

Ctrl. - March 3, 2014, 4:50 pm

Hey Legion,

I would like to know what is the best way to begin learning how to properly, and sufficiently Dox, and create a bonnet. I have read a few threads around the forums, but I would also like to hear your guys' personal opinion!

Thanks, Ctrl.

get into the n

Well, I pinged the addresses, and typed the IPs into the browser. They work but I get "the page you are looking for isn't available" but the actual site is loading. So I guess the block is only at the application level and not at the network level? I don't think it's possible to browse the site using IPs right?

Thanks for the pointers about Metasploit, I will look into it for sure.

xZoggie - March 4, 2014, 6:38 am

Successfully Doxing - (theres many tuts on that... , but google is always your best friend). You can use spokeo if the victim is in the united states. But frankly, if they are not internet savvy, your screwed.

As for botnets, there are many botnet builders available in the marketplace. Many of them are good. Do you want me to refer a few???

(Mar 3, 2014 08:48 PM)AdvanceWolf Wrote: [\[CITE\]](#) Just a quick question. How does one get into a PDF with a password on it other than brute forcing it?
If you feel comfortable, pass it over ot me...

No...

SQLi is one of many ways...

There is SQLi, XSS, LFI, RFI, and many more...

You can also attack a server with penetration testing methods...

So, if you dig a bit deeper in the forums...

You will find many HQ tutorials on these diverse hacking techniques...

Hope it helps..

?

Sunnypay - March 4, 2014, 5:05 pm

Is it possible to hack/exploit enjin websites?

Plain - March 4, 2014, 5:10 pm

Im trying to set up a rat

1. I cant portforward because my mom changed the router password and she forgets. Anyway to get it back?

2. People said use a VPN what vpn should I use thats free and so I have to do anything with the vpn for it to work?

Using darkcomet btw.

Zabuza? - March 4, 2014, 8:44 pm

(Mar 4, 2014 06:10 PM)LiamiFromMiami Wrote: [\[CITE\]](#) Im trying to set up a rat

heelerdude93 - March 4, 2014, 10:39 pm

Ok, so where to start. ?

Well, I am a complete noob. I know absolutely nothing about hacking. I've always liked the idea but never knew how to get started.

My main goal is to learn how to hack in to FuelRewards.com and give myself free gas, using a VPN and fake information of course, because my car uses a lot and gas is expensive for me. But I digress.

I guess what I'm asking for is a mentor so to speak. Someone to kinda walk me through the things I need to learn and the steps I need to take in order to reach my goal.

I understand this is a lot to ask, and if it is too much trouble just let me know.

Any help would be much appreciated. Thanks in advance.

HydraPlane - March 4, 2014, 11:40 pm

(Mar 4, 2014 10:09 PM)LiamiFromMiami Wrote: [\[CITE\]](#) If I reset my router does my wifi password go away? If so how do you set it again? What else happens that is important to know.

You basically restore it to factory settings so it returns to its fresh out-of-the-box state. Meaning you will set everything up from the beginning, refer to your manual.

sml555 - March 5, 2014, 12:29 am

(Mar 4, 2014 10:09 PM)LiamiFromMiami Wrote: [\[CITE\]](#) If I reset my router does my wifi password go away? If so how do you set it again? What else happens that is important to know.

It will obviously also disconnect all the connected devices...

but will get the job done...

:D

ItsOnlyekaIB - March 5, 2014, 12:34 am

I have a problem with cain and abel, the issue is that when I go into configure to choose my adapter so I can actually use cain, it has two adapters listed: Realtek PCIe FE Family Controller and Microsoft (neither of them have an IP shown).

I know that the Microsoft is the one that should have an IP (by going into the wireless tab and active scanning)

Please help! Thanks :)

Legit Hackz - March 5, 2014, 4:08 am

what miner do you guys suggest. also what coin should I mine??

sml555 - March 5, 2014, 4:38 am

(Mar 5, 2014 05:08 AM)ogtrapz Wrote: [\[CITE\]](#) what miner do you guys suggest. also what coin should I mine??

Depends on your aims...

I mine BTC...

(Mar 5, 2014 01:34 AM)ItsOnlyekalB Wrote: [\[CITE\]](#) I have a problem with cain and abel, the issue is that when I go into configure to choose my adapter so I can actually use cain, it has two adapters listed: Realtek PCIe FE Family Controller and Microsoft (neither of them have an IP shown).

I know that the Microsoft is the one that should have an IP (by going into the wireless tab and active scanning)

Please help! Thanks :)

Have you tried running the application as "Administrator"?

BlackEyez - March 5, 2014, 12:30 pm

lol you guys dont answer any of the newcomers questions, I've seen several posts about people having no idea on how to learn. atleast post a freaking link to a guide or smth.

Rafaelinio - March 5, 2014, 12:51 pm

can someone explain to me how email spoofers work... with details? thanks in advance (i posted a thread on this question and nobody answered)

sml555 - March 5, 2014, 2:25 pm

(Mar 5, 2014 01:30 PM)BlackEyez Wrote: [\[CITE\]](#) lol you guys dont answer any of the newcomers questions, I've seen several posts about people having no idea on how to learn. atleast post a freaking link to a guide or smth.

we do...

but we dont have all the time in the world...

so some posts we cant get to...

and some are just the same question over and over again...

they can just look through this thread...

even a simple 2 - 3 pages behind and find it!

(Mar 5, 2014 01:51 PM)Rafaelinio Wrote: [\[CITE\]](#) can someone explain to me how email spoofers work... with details? thanks in advance (i posted a thread on this question and nobody answered)

Thats a good question...

What the email spoofers do is, they simply change the data in the header of the email. This make the emails look like they are coming from another place completely.

Hope that helps.

?

cl0x - March 5, 2014, 2:55 pm

Started my own thread (instant noob mistake) earlier,

but was hoping if someone could help give me a few places to get started i.e.

Plain and simple people come here to learn,

and i would like someone to serve me up with the most basic reqs!

sml555 - March 5, 2014, 3:20 pm

(Mar 5, 2014 03:55 PM)cl0x Wrote: [\[CITE\]](#) Started my own thread (instant noob mistake) earlier, but was hoping if someone could help give me a few places to get started i.e.

and i would like someone to serve me up with the most basic reqs!

Well..

we arent here to spoon feed people.

You can simply search through the forums and find HQ threads on different techniques....

I'd be glad to point out some basic methods, so you can learn..

But finding them is your job...

Search for Tuts on SQLi, XSS, LFI and RFI...

But before that...

Try to learn PHP, so you have an understanding of how things work...

Hope it helps...

?

Yes, its set to by default.. I've googled it but no answers have come up :/

Sunnypay - March 6, 2014, 3:28 am

Question ~ Is a VPN all you need to be anonymous while creating a botnet?

Consolidant - March 6, 2014, 1:52 pm

Any recommendations on what program to use to bruteforce?

Epidemz - March 6, 2014, 2:11 pm

Hey guys, I'm a noob.

If I buy a plasma HTTP bot, how to send my crypt file and get a lot of slaves?

I bought the good crypt, but I cant check my stub in public services!

If I will send spam to mailboxes with my crypt file, they can send my file to test antivirus companies, how you guys do it?

sml555 - March 6, 2014, 3:08 pm

(Mar 6, 2014 02:52 PM)Consolidant Wrote: [\[CITE\]](#) Any recommendations on what program to use to bruteforce?

Hydra is a good choice...

:)

But there are many out there that could suit your needs...

Is it for anything specific???

(Mar 6, 2014 04:28 AM)Sunnypay Wrote: [\[CITE\]](#) Question ~ Is a VPN all you need to be anonymous while creating a botnet?

Not completely...

Im not 100% sure what else though...

There is meta data...

Consolidant - March 6, 2014, 3:28 pm

[quote='sml555' pid='38743925' dateline='1394147324']

Hydra is a good choice...

Is it for anything specific???

My specific need would be to crack several accounts Netflix or Xbox so I can do giveaways or even sell .

That won't suite you for that. You might want to get some configs.. ?

SIM-1206811 - March 8, 2014, 1:14 pm

(Mar 6, 2014 04:28 AM)Sunnypay Wrote: [\[CITE\]](#) Question ~ Is a VPN all you need to be anonymous while creating a botnet?VPN is a good choice, and probably the easiest choice to get decent anonymity, but you should also be certain that the VPN you are using does not keep logs at all, or else your security might be at risk.

Another good option is using proxies, (make sure its private/dedicated proxies). The downside to this is that the speed will decrease significantly compared to VPN, but the security will be higher depending on the proxy you are using. and also the what Anonymity level the proxy is (level 4, 8, 16..) where as level 16 proxies have the highest anonymity, and the price for private ones are high.

(Mar 6, 2014 02:52 PM)Consolidant Wrote: [\[CITE\]](#) Any reccomendations on what program to use to bruteforce?

I would recommend using CryptoHaze multiforcer, or Hashcat.

however if you want to use it for cracking Netflix accs etc. i would recommend getting a sentry config.

Bruteforcing will take alot of unnecesary time

CrypticX - March 8, 2014, 3:17 pm

If my bots are mining for me, will my electricity bill increase? Or it doesn't have any effect?

PRM assassin - March 8, 2014, 3:51 pm

can any one send me a brute force and a dictionary attack link please?

SIM-1206811 - March 8, 2014, 4:19 pm

(Mar 8, 2014 04:17 PM)Str8ballin Wrote: [\[CITE\]](#) If my bots are mining for me, will my electricity bill increase? Or it doesn't have any effect?

That will not have any effect on your electricity.

They are mining from their own computers and are only mining as workers, set your account at the mining pool.

CrypticX - March 8, 2014, 4:28 pm

(Mar 8, 2014 05:19 PM)InfinityLord Wrote: [\[CITE\]](#) That will not have any effect on your electricity. They are mining from their own computers and are only mining as workers, set your account at the mining pool.
Thanks fo your answer ?

Another question

I hear in the news saying sometimes "they hacked a bank". The question is what do they mean by that, I mean how can you hack a bank? I think what they mean is that the hackers hacked bank accounts, right?

Because I think it's impossible to hack a bank, but correct me if i'm wrong.

Thanks in advance ?

sml555 - March 8, 2014, 4:36 pm

(Mar 8, 2014 04:17 PM)Str8ballin Wrote: [\[CITE\]](#) If my bots are mining for me, will my electricity bill increase? Or it doesn't have any effect?

If the bots are mining off others computers, then it obviously won't increase your bill.

Hope that helped...

?

PS, If you need some tips on making more out of it...

I could help you out...

?

Trust me, Remote file inclusion is a waste of time in my opinion.

Its very rare to find it.

Also check out some tutorials, Ive seen plenty Of XSS and Rooting tutorials on here.

NeymarS - March 15, 2014, 2:58 pm

First I want to thank all of the members that are contributing to helping this thread.

Secondly, I have found my dSploit is not sniffing passwords as it should. I am not entirely sure if I am selecting the wrong 'target' however, I have tried multiple times with multiple types of targets. So I have a few questions.

1) Am I selecting the right 'target'. I picked my local IP (192.168.1.1) instead of the local IP of a certain device (Like 192.168.1.18).

2) Will it capture Facebook, twitter, instagram ect. passwords?

Btw, I am running it on a Samsung S3 with the full version of BusyBox pro.

Thanks,

-Ney

The vulnerability is virtually extinct...

:(

(Mar 15, 2014 05:26 PM)#Success Wrote: [\[CITE\]](#) Where did you start when learning how to hack and could you give me a few things i could focus on to improve my ability?

I learnt most the stuff I know on this forum...

So I would advise you to learn to code...

and read tuts on this amazing site...

Also learn to search up information...

HF is a site where the world's greatest hacker's openly give their own methods of hacking...

So learn as much as you can from them...

?

(Mar 15, 2014 04:42 PM)NickChan Wrote: [\[CITE\]](#) Anyone have the answer to this ?

Well...

Using a VPN does help...

But my advice would be...

Change your MAC address, hack a wifi...

Then use a VPN, and if you are sharing any files, REMOVE THE METADATA!!!

That would cover most aspects...

Hope it helps...

?

I Am Sexy Boys - March 15, 2014, 9:17 pm

How did the OP get the black hat award. Looking @ his threads he is clearly a joke

Bruteforcing a SSH/FTP server for \$250? What a genius. You could literally buy 3 ecateles, setup THC on all of them and bruteforce and off you go

Legit Hackz - March 15, 2014, 10:39 pm

okay next question lol. Ive opened up my ports on my vpn. canyouseeme.org can see them. i tried using my internal ip and the vpns internal ip and nothing. any suggestions? also the port is going through my firewall. Im also listening when i check my ports

I Am Sexy Boys - March 15, 2014, 10:48 pm

Please make sure that you have opened the respective port, otherwise there is no way it will work.
Also, a VPN would be good, as it wont keep you completely secure, but will be harder to find u... :)
For making it undetectable by AVs, you should encrypt it with a crypter...
There are many available in the marketplace... :)

(Mar 17, 2014 09:45 AM)p_h_p Wrote: [\[CITE\]](#) i wanna 2 things --->

(1) After that Where i can put the proof of this is there any website.

Thank you,
Well, after shelling the server...
All you have to do is backconnect the shell and your router...
Then after that you have to find a local exploit which will give you root privileges...

This advice is for educational purposes only!!!

Yugal - March 17, 2014, 4:33 pm

I have never heard of that brand before. Anyway, in your router control panel does it show an option for port forwarding? If not then try to update your router's firmware. If then there is no option, then it is possible your router just does not allow port forwarding.

sml555 - March 17, 2014, 6:27 pm

(Mar 18, 2014 05:18 PM)Yugal Wrote: [\[CITE\]](#) i want to be able to mess with people. so please respond

To mess with people I'd recommend learning how to use Remote Administration Tools/Trojans, or RATs. These programs spread like a virus and can be the source of great entertainment.

(Mar 18, 2014 05:22 PM)thegamerchunk1 Wrote: [\[CITE\]](#) k I got a question : How do we get out of this shitty forum and change to a better one ?

wait why am I asking just go there -----> www.vip hack forums .net

this forum is full of scammers

I have a question for you; why waste your time spamming that horrendous forum? It's literally a cheap knock-off of HF. You guys have literally ripped the same sub-forum icons as well.

Piss off, spamming scum. No one wants to even look at your forum.

- Ceoff, and everyone else of HF

duchu1208 - March 19, 2014, 8:35 am

Can you recommend me a free FUD keylogger? I've searched, but found only project neptune, which is probably detectable. And if you could tell me one more thing. How can i spread keylogger among my friends? It is not simple, because i want to send it as .mp3 or .jpg file. It should at least look like it's just picture of somebody, music or video file. If it is an exe file, they won't open it. My friends are worried about .exe trojans and viruses. Thanks in advance !

Shike - March 19, 2014, 12:25 pm

I have been hoping to get into hacking for the past year or so now, and i've been a part of this forum for much longer than that, but long story short, i was hoping someone would be willing to, for lack of a better term, "take me under their wing." I don't know how/where to start, and i'd really appreciate someone mentoring me. I know a little bit of programming, i'm beyond interested and dedicated to learn, but i just can't seem to find anyone that's willing to help someone that's not 100% new, but still has some basics to be covered. For example, I've used dark comet before successfully, so i'm not a complete noob.

So the point i'm getting at is I'm trying to reach out to a more experienced hacker that would be willing to help someone interested in learning hacking.

Think of it as a long term investment, once i get better at hacking, you can ask me for favors, etc. because that's only fair, and i'd love to help someone that helped me.

::Thunder:: - March 19, 2014, 1:57 pm

Hey guys,

1.) I would like to spoof my phone number and want to know how to do this, how much it would cost and 1 sentence on how this should work. i just know you need an asterisk server and PBX, but dont know how this works.

2.) If i want to click an ad and the URL there is abc.c0m but after clicking i come to bbb.com is that called link cloaking? How can i do this and how does it work?

3.) Also about RATs and Crypter: Would should i use as a beginner?

sml555 - March 19, 2014, 2:58 pm

(Mar 19, 2014 08:35 AM)duchu1208 Wrote: [CITE](#) Can you recommend me a free FUD keylogger? I've searched, but found only project neptune, which is probably detectable. And if you could tell me one more thing. How can i spread keylogger among my friends? It is not simple, because i want to send it as .mp3 or .jpg file. It should at least look like it's just picture of somebody, music or video file. If it is an exe file, they won't open it. My friends are worried about .exe trojans and viruses. Thanks in advance !

Search up file extension spoofing..

You will find everything there...

?

3.) Also about RATs and Crypter: Would should i use as a beginner?

1). There are services which you can call and you will be using their number in the place of yours. That would be spoofing your phone number. There are other ways too.

2. That is called link cloaking, and is usually done using a 301/302 redirect in a php file.

3. Get darkcomet, or any RAT you feel comfortable with (will need some research). Go to the marketplace, and buy a crypter...

Then create your RAT and FUD it...

Quite simple actually, and there are many tutorials on it too...

Spider Venom - March 19, 2014, 3:12 pm

If I wanna take someone's Facebook account, is there a way to make sure they don't get it back?

SH?D? - March 19, 2014, 3:16 pm

1. can i use my jar rat to get users outside my house through facebook 192.168.1.4

sml555 - March 19, 2014, 3:31 pm

(Mar 19, 2014 03:12 PM)KingBob Wrote: [\[CITE\]](#) If I wanna take someone's Facebook account, is there a way to make sure they don't get it back?

Sure...

But its not easy...

as you would have to hack them...

Then the email address...

and unless they are stupid and forgot their questions, or did not link a secondary email address or

did not add a phone number...

It is possible...

The only other way is to delete it...

But thats not the greatest idea...

As I doubt it will suit your needs...

Also, if the person is in your LAN network...

You can spoof the facebook page...

But that would not be very effective as if they go from their phones or some other system outside your network...

You would not be able to stop it...

(Mar 19, 2014 03:16 PM)Berries Wrote: [\[CITE\]](#) 1. can i use my jar rat to get users outside my house through facebook 192.168.1.4

I guess you could...

Not really too sure...

But that would also involve SE, which is a banned topic...

Bumping back to the top...

Still here if anyone needs any help...

Wrong section, go to the correct section where you can find a mentor to help you, they do cost money though.

vulpixbrinley - March 22, 2014, 12:05 pm

I was wondering what the next step or method I should try to hack an account. I've already social engineered the customer support to gain access to their spotify/8tracks/keek account but I didn't actually get the password and the person I "hacked" used a different email for each. I believe they use the same password for everything so I just need to find the password to one. (I've tried social engineering the person but they never respond) Oh, and they are using a MacBook Pro

SH?D? - March 22, 2014, 12:26 pm

what i need is to spread my gaming any testing

Raddify - March 22, 2014, 1:02 pm

What is the best way to learn more about networking? (Wifi, WPA, WPA2, Other network things and such)?

(Please PM when respond so I know to check here.

sml555 - March 22, 2014, 2:55 pm

You can't just find or create exploits, as those games have spent hours and hours and have paid hundreds or even thousands to make sure there are none. The only way I could think of finding one would be coming across a glitch which allowed you to get extra credits or something... exploiting a game is hard and complicated, especially when they're massive games.

So, in short form: You more or less can't.

sml555 - March 23, 2014, 1:12 am

Thnx for the fast reply. And yes im pretty much aware of the fact. that finding exploits for MMO games is not something u can really learn by steps or a tut. As u stated above, about "Glitches". Im pretty sure most hackers find their exploits within games like this. through Coming across Glitches. i was just wondering if their was anything specific, that i needed to know befor even searching for a exploit on games like this. eitherway ur right. it will be very hard because its like You Vs The MMO (Security) ?

sml555 - March 23, 2014, 2:34 am

Well, you would need to know how to program, and also need an idea of how the game was made. If you dont have that, the probability of finding a flaw is very low. However, some glitches can also be spotted from normal usage of the game (black box testing). So, programming skills would be required, and usage of the game too...

Which is the most difficult course in hacking?

0x03a8 - March 23, 2014, 3:49 am

(Mar 23, 2014 02:59 AM)Xin R Wrote: [\[CITE\]](#) Which is the most difficult course in hacking?

There isn't really a most difficult course. It depends on who is doing it.

The hardest language to learn is probably C++.

The hardest thing to do is probably to create exploits, and even harder might be to fix those exploits.

0x45 - March 23, 2014, 4:13 am

(Mar 23, 2014 03:49 AM)Semizias Wrote: [\[CITE\]](#) There isn't really a most difficult course. It depends on who is doing it.

What OS are you on?

For linux, just drag and drop the certs into your openvpn folder(implying you're using openvpn)

```
cd /etc/openvpn
sudo openvpn --config "<name of VPN>"
then enter the username and password.
```

Sorry for the vague question, but how do you jack IG's or twitters?

sml555 - March 26, 2014, 2:27 pm

(Mar 26, 2014 08:31 AM)Vaxor Wrote: [\[CITE\]](#) How do I convert a crypted/compiled RATing file into a link? if you could tell me that will be brilliant!
Do you mean backdooring it???
If so...
Id say, using metasploit, you can make some pretty good backdoors...
Hope it helps...
?

(Mar 26, 2014 12:07 PM)harris Wrote: [\[CITE\]](#) Can gmail be brute forced with Hydra or brutus?
Sure you can...
But there will be a problem with captchas and obviously luck...
However, ther are more effective ways to get the job done...

(Mar 26, 2014 02:25 PM)Billie Joe Armstrong Wrote: [\[CITE\]](#) Sorry for the vague question, but how do you jack IG's or twitters?
Well...
Id say keylogging or session stealing is a good option...
Despite that bruteforce (but thats a very BAD option)...
you can do session stealing and keylogging using a bit of SE if needed...
Hope it helps...
?

(Mar 26, 2014 09:22 AM)DumpyHenning Wrote: [\[CITE\]](#) Previuos post (<https://gyazo.com/615c7b2bcaa5612fdd574420bf658eb0>)

Is there an tutorial on how to bruteforce it? What would be the best way to get on a keylogger to do it?

I do know the admin's local IP
Id say...
get into metasploit...
find a vulnerability if possible...
crack into his pc...
OR...
if you have his email address or some kind of social networking link...
Then just send him a crypted keylogger...
and your job is done...

In both ways you can keylog...
just the keylogger reports back as a batch processing...
and the metasploit attack is more of a real time base...
Hope it helps...
?

Sure there is...

You can try to find a torrent for VMware...

I prefer VMware...

But finding torrents for a iMAC can get kinda hard...

so use this site:

<https://www.virtualbox.org/wiki/Downloads>

They have a Mac version, and is equivalent to VMware. It is also FREE!!!

:D

As for the Windows OS Image required...

Download it from a torrent site...

Hope it helps...

?

MediaFire distributes samples to antivirus companies, do not upload on MediaFire but rather on non-distributing upload sites such as AnonLoad.

WOW!!!

Did not know that...

Thanks...

:)

I really hate being that guy, but Im going to because I want your guys opinion. I for the last year I have been studying, working, experimenting, and challenging myself because I have a desire to learn as much as I can about programming, pentesting, and webhacking. Ive gone through and did some work in Java(got a textbook and went through the work), im going on javascript and php right now, and will continue with the programming languages because Ive been told that understanding the way things work at the base level in important. My issue is that I also went through some basics of SQLi and Im just confused if that is just a beginners way to get the concepts of webhacking down of if SQLi is used to penetrate bigger websites. What direction should I go to learn what is needed to be efficient in being able to choose a specific website finding its vulnerabilities, instead of looking for websites using google dorks and things like that. I know that question might seem obvious to you guys, but I am the type of person that wants to learn everything so its hard for me sometimes to stay on track. Id really appreciate the input. Also, do you have any recommendation of places to go to find projects to work on or to volunteer for to practice my programming in real world situations? Its difficult to find my way with school, work, and without having a mentor to guide me but my dedication is there 300%.
