Thread: [No-ip Banned you? Soution here](#)

NoFundog - December 12, 2013, 12:36 am

Hey guys!

A few days ago it seemed that no-ip was on a banning spree, and They got to my dns too. I was so frustrated that I couldn't log in and update the dns that I started to think opn how I could get my servers back.

Then the solution popped up :)

You know, once in a while you get a mail saying you should update your dns by logging in and confirming that it's still in use.

Flnd that e.mail and click the link, and reactivate it!

I sitll can't log in through the main panel to update or manage the dns, but the link worked and my dns became active again.

I don't know how long it will last, but if you get it up and running again make sure you move all your servers to a new dns by updating your slaves with a new and FUD server.

Hope this helps! :)

Treepie - December 12, 2013, 1:08 am

If this is really true, then this could help a lot of people getting their slaves back! Thx for the share!

NoFundog - December 12, 2013, 1:09 am

No problem! It definetly worked for me and I hope it can work for others too! :)

Don't use Dark comet to update no-ip. WOn't work. You need to check your mail. YOu won't be able to login to no-ip if you are banned.

Cape - December 19, 2013, 10:53 am

This will not help anyone because you cant even go to main panel or hostname section.

SURE if it works it will be helpful, the best solution is to buy an offshore domain and make your own DNS service from this offshore hosting :) you will never be banned again

You can also buy a VPN accepting port forwarding with a DEDICATED IP, so just type your VPN IP address instead of your DNS when you build your server :)

best regards

It DID help me.. Of course I can't login anymore, but I was banned, and I clicked the re activate/continue using dns link and my dns got back online :)

You need to download the No-IP DUC, as the one built into dark comet won't work.

That's true... but if you're banned it won't make a difference :) You could maybe as well use photoshop to update your dns.. :D

dread5000 - December 19, 2013, 6:10 pm

didn't work for me, don't you have to log in to your account on no-ip duc? it doesn't let you log in says "error occurred"

nelram - December 19, 2013, 7:36 pm

I went through the steps to update it and that seemed to work however when I try to log on to the banned account in No-IP DUC it won't let me. How did you get around this?

?layStation - December 20, 2013, 12:27 am

Sadly, My No-IP was banned as well.

Thankyou for this solution!

Merry Christmas!

Happy it worked for you :)

Well, you can't log in to no-ip again. I suggest making a new dns and transfer/(update all your slaves to the new dns :)
