Thread: [NEW DOX METHOD](#)

J4B3D - December 12, 2013, 4:43 am

First Off

Your going to want to add the Target on Skype. This method only works if you have him accepted as a Skype contact.

Note: The Skype database Updates their contacts about every 15-30 mins to the FaceBook servers. Be patient.

Secondly

Go to <http://www.facebook.com/?sk=ff> From here you can add friends through Skype, Gmail, Hotmail, Yahoo, Sbcglobal/ect...

What you Get from skype contacts through Facebook

<https://gyazo.com/4ebd96e3715b11e1b87b33b048b27d40>

Note: Names blacked out for privacy. That is where their actual Skype name should be.

Note: Do not add people through the Skype find friends button on FB.

Instead, Simply search their name that is associated with the facebook account you found with <http://www.facebook.com/?sk=ff> and refrence the picture. If you add them through the Skype Checkmark system it will send them a message in skype saying "Hello target, I'm user on Facebook and I want to add you" This will be a tip off to the target that your attempting to dox him.

Note:Your also going to want an alternate Facebook account. [Preferably of a Hot Female] to add the target on if his account is private.

Almost any sane man adds a beautiful woman to his Friends list.

What to do with this information?

- Find their family members over 18 and find listings through <http://www.anywho.com/whitepages>
- Find long lost friends .
- Scare people through skype.
- Dox only through skype.

Thx 4 read this ! - J4B3D ?

Lol, you've copied and pasted this from somewhere else.. Just googled the link <https://gyazo.com/4ebd96e3715b11e1b87b33b048b27d40> and found threads on HF and other sites...

Nice try though, add credit next time.
