Thread: [Official njRAT v0.7d FREE DOWNLOAD](#)

xVulnerable - December 12, 2013, 4:29 pm

This is njRATv0.7d download thread.

njRAT is a very fast stable RAT coded in VB.NET which requires the .NET Framework 2.0 dependency. njRAT is the #1 FREE RAT.

There is not much difference between v0.6.4 It has a slightly different GUI.

It appears completely safe. I've downloaded it, and any network activity it has / any files that are run

are just itself.

Completely harmless to me ?

Buzzle - December 12, 2013, 5:40 pm

Very nice upload. Good to see that you're keeping it up here in the RAT section xVul

The download link seems to work for me, just takes a little while to load.

Mr president - December 15, 2013, 3:27 pm

How does this works? :o

I'm not good at this, so i want some information or so if possible.

Vexane - December 16, 2013, 11:32 am

Thank you for this, DarkComet is too mainstream + it disconnects my few bots that I manage to get.

No RAT is FUD. You need a crypter. Make sure it supports .net applications.

Dena - December 24, 2013, 2:01 pm

Is there any tutorial for this njrat? I am very noob with these and would love if there exists any. As usual i got an errors " Could not load file or assembly "WinMM.Net, version=1.0.0.0, culture=neutral, publictokenkey=null" or one of its dependencies. The system cannot find the file specified" This is Net framework error >_<

But i cud open the rat still, because i clicked continue..

i downloaded but for some reason the server will not connect. Im using vpn's static ip address and a different port than 5552 or whatever op was using (& not a dynamic no-ip address). but like i say server will not connect from test vb machine but if i type ipaddress:port in a browser in test vb machine it will temp show connection. what could be the problem?

edit: nevermind i guess it dont like ipv4 addresses works fine with no-ip (which i hate to use) and i use cube crypter.

the rat seems pretty stable and functional uses alot of resources on victim machine when lookin at their desktop

but almost everything else is barely noticeable (on victim machine). great for a free rat!!! also great for 1st timers!!!

im no expert but i will be willing to help answer any questions and like op said "say thanks & keep this thread alive"

Ahh ok. Sometimes it takes a few minutes for me to have the port open up. So try port forwarding and when you have it done create a rat then use canyouseeme.org. If not try UPNP.

Echo419 - February 10, 2014, 12:18 pm

Hi, starting today I have noticed a single IP that is "Connected" for a few seconds then it switches status to "LTimeOut" and was wondering if anyone knew what is going on. It keeps connecting then disconnecting. Its never the same port either. Ive been using nJrat 7.0d for awhile and it only started recently.

Hi, I've been using this version of nJrat for awhile and have a few computers I am monitoring with it. But starting recently I get a user with the same IP logging in and getting "Connected" then after a second or two getting "LTimeOut" disconnected. The user always has the same IP but the ports change each time they connect. So I was just wondering if anyone knows whats going on and maybe help me with it. Thanks.

I will give this version a try. I have a previous version of njRat and also Imminent Monitor. I like them both, they are both very fast, I haven't had tons of bots so I can't comment on that. I have heard people complain about lack of features on njRat as well, but not a big concern here because I am just learning this stuff, chances are, I won't use a lot of them anyway. I have been using nVpn (Sweden) with njRat, so far it's a nice pair.

Go to canyouseeme.org and test your port, make sure you've portforwarded and disable your firewall and Norton.

It's normal to see the number of connections as that does not mean you have any slaves. Drop me a PM and if my steps didn't work I can further assist you from there.

Hi all, quick couple questions I hope someone can answer. What is the proper port to have open for this RAT or does it ever matter???? I used port 1177. When it first launched it had port 5552 pre-set i believe. What do I do and is any port okay or do they (different RATs) all require specific ports.

Also im using Byte Crypter, Does anyone have any advice on how to set that up correctly. I have had multiple downloads of my crypted file but no clients show up yet. My port is open correctly and my DNS is running fine. Any help would be very appreciated. Thanks in advance

It's very buggy. I love it....the FPS rate is high, though it seems to be rather buggy, because it takes me 10 times to press on Webcam, Microphone, or even Remote Desktop, to actually work. I'm running Windows 8.1 Pro 64 bit...So now what? Tried to change compatability settings so it can be compatible with Windows 7, and still doesnt work. Will there be newer versions or is this the final one?

while building your rat put your noip , don't check other option like : icon , protect process , ...) option , just add those option while using your crypter better to prevent conflict.

njrat 0.7d work with me but .net execution is very low reach from 12-20% max since i buy 2 times install from different bot shop

Make sure the port is portforwarded on your ipv4 address (cmd > ipconfig)

Disable your Firewall and Anti-Virus, then open your no-ip DUC and then listen to the port.

and what about reverse proxy feature ,socks 4,5.

jose55 - June 2, 2014, 9:22 am

Thanks for the link bro i think i should try this out because have been using DC and i find it so irritatingly unstable and am constantly loosing slaves would be nice to see what this is like but basically the reason why i haven't bought any paid ones is because of the FTP feature in DC which is what i really need. Am looking for a RAT with a good FTP feature which i can use to forward logs to view through my FTP client without actually opening the RAT control panel.

Do you know of any stable ones with that feature bro ???

kivik - June 2, 2014, 1:02 pm

hello guys this rat is very nice, but I did not connect in the logs

I get connected and disconnected

can someone help me understand?

thanks in advance

njRAT version v0.7d

victorblaise - June 3, 2014, 6:29 am

Finnaly a good RAT, yeah, it's true there aren't a whole lot of options but hey, better then nothing, besides the stability in this one is far better than any other that I have tested at the moment.

CathaLyst - June 3, 2014, 9:40 am

Bro, your rat is really awesome, my compliments. It has all the functions one needs. Keep up the good work ;)

SycoHD - June 7, 2014, 8:48 am

Figured I'd stop by this thread and let everyone know that this product is one of the best free rats out there, the design on it is so smooth and super easy to use. If you search a guide on setting it up, you will also notice that the set up is extremely easy.

This thread is wonderful, you don't have to worry about getting infected by someone else when you try and download Dark Comet from them. This makes things so much simpler.

Leozack - August 13, 2014, 3:27 am

Hey - I figured I'd try njRAT on a machine I temporarily have local access to to setup/install/etc. Had to disable IE smartscreen just to download it on the user's laptop. Then had to disable MSEE (I thought it was no good at detecting anything anymore?) Made a build and ran it. But as soon as MSEE live protection was ticked it got rid of the installer, the built exe, the RAT file in appdata and even the startup entry in the registry for it. So clearly I'm missing something ... things have sure changed since the last time I did anything like this

xVulnerable - August 13, 2014, 8:03 am

Fixed the download links. Everything should be fine now.

Leozack - August 13, 2014, 8:25 am

Tried blizzard lite rat aswell and the same thing -win8 defender just kills it straight away. No idea how I'm supposed to stop that as most crypter info seems to relate to infector builds not stubs? Or they cost. I dunno! I just want the most basic of setups for just 1 machine to not be killed by defender before I have to give this back and the chance is gone :/

Are you saying njRAT is better than DC? I'm just trying to setup 1 machine to do keylogger/webcam with DC and so far the keylogger isn't FTPing the logs properly. I could use njRAT instead if it works better and is more stable? Since it's only 1 PC I'm hoping to 'allow' it in win defender and it will hopefully stay on ok

I am gonna test it later tonight. Otherwise I downloaded it opened it and everything looks good! I will give feedback on it l8tr!

Leozack - August 18, 2014, 2:00 pm

Ok so it seems to work - lags more than DC does. Keylogger seems to work well and refreshing on the sever picks it all up. But I'd still prefer it if they were sending keylogs via email/ftp even if I'm not connected to them? Might need to look at another keylogger

I take it back - njRAT doesn't seem to connect properly. If I run the server I don't get the connection (though I am running server/client on the same VM) until I disable/reenable the network and then I get the connection - but obviously I can't do that to the remote machine - neither do I want to have to have the server running already when they turn on in order to get the connection. So that seems pretty bust :/ The server (by that I mean me not the remote machine, but maybe I'm the client?) also decided to eat up all the CPU and use up 170m of ram then drop it all and go again until I closed it - not sure how I managed that!

Well neither DC nor njRAT seem to show up on my VM host when infecting a laptop with them. So that's a big fail so far :/

Ok so last night I failed to get DC/NJ/Nova/Sub7 to appear on my VM from the laptop - I'll likely have to give the laptop back tomor. This is really disappointing I just want keylogger/webcam from 1 laptop! :(

only thing I would request is better keylogger It is good but the logger wich can store logs in different days like im and live logger would be osum rat it is good now but if that things would build in I be more then happy to change to this rat over payed ones maby:d

mrpapshmeer - August 20, 2014, 3:49 pm

I spent almost a month messing around with Darkcomet trying to get it to work properly with no success. Thinking I had to be doing something wrong and about to give up; I came across this njRAT download and figured I would give it a try.

Within 15 minutes I had 15 servers up and running! Very impressive!

In my opinion njRAT blows all other free RATs away.(Even some of the paid). As well it is very noob friendly.

I would also like to share that I have found LaCrypt Crypter paid version (only \$5 a month) works excellent with the njservers.

Thank you very much xVulnerable for this share.

Great free rat, good for beginners as everything is easy to understand. (like the interface and such)

DamienVC - September 6, 2014, 10:21 pm

Idk but the RAT and couple of its plugin dlls got detected as MALWARE on Avast.

Is this 100% trusted?

Okay so I'm a bit of noob as far as using rats go, im more experienced in the white hat side of getting rid of them. I downloaded this and went to extract it and as soon as I did AVG popped up and quarantined all the files. Is there any way to bypass AVG on this or is the only solution to remove any anti virus software I have?

to avoid this you can add the file to the exception list in your avg options

and to make this more easy make a folder and add it to exception list and put everything about hacking in it

Tried several crypters for this and none work anyone got suggestion for a free 1 or can pm me and crypt for me?

achristopher - November 11, 2014, 9:01 pm

Anyone know if cube crypter works with this? Also, how does the USB infection work? Does it just auto run when the USB stick is plugged in?

Dumb Question:

I am a bit confused about what exactly the stub is or does. From my understanding I need to use the builder to create what I would call an agent, the agent is what gets installed on victim computers. Once you've created the agent you need to use a crypter to obscure the agent from anti-virus programs. Where does the stub come into this process? Or is what I am calling the "agent" actually the stub?

miriton - November 12, 2014, 1:41 pm

Hi Peoples. Its Safe but you must allow the Rat Tool in your Firewall, and open the Port 5552 in udp and tcp. Then if the Victim clicks on your njRAT Rat, you have your victim in your botnet.

Maxstripe - January 19, 2015, 6:07 pm

im gunna try this one (used darkcommet lasttime... it had a rat bound to itself) hope this one is clean

YungDanny - January 19, 2015, 6:08 pm

be careful , a lot of people a re saying that this version is backdoored on different forums , OP make sure it's safe before posting .

kor4o - January 22, 2015, 9:17 am

Thank you for that rat. Great free tool. :)

mind_freak - January 22, 2015, 9:22 am

Just ran the tool,don't have a problem with it.

:)

Arlic - January 31, 2015, 10:26 am

I don't know how I feel about agreeing to download malware. A mediafire link or something would be great though.

mrpapshmeer - January 31, 2015, 12:43 pm

Its a freekn RAT! What else would you expect it to say? Trusted App use in moderation? I downloaded this file almost a yr ago and its good to go!

It's a RAT. What did you expect? It's a program that builds a virus, so it's obviously gonna be detected as a virus.

Doug Dimmadome - February 4, 2015, 7:21 am

Downloaded and it seems to be okay. I love the simplicity of this RAT. Thanks xVul!

Perhaps you should look up the definition of a Trojan.
All hack tools will have detections sooner or later, but that doesn't mean that they are all backdoored.

Use a VM if you still don't trust it.

Artemis! This RAT is a hoax, it is filled with Trojans, and adware. One after a long download time period it filled my computer with "unwanted" programs such as "PCBackup" and many more. It also tried to set trojans, luckily my Anti-Virus killed most of it, I still had to reboot to stop the rest.

I dl link. I get calculator? Whats up with that?

Im a dope...i got it . Duh Thanks will review soon.

Haxyer - April 1, 2015, 12:09 pm

Thanks for it.. i am still undecided if to open it or not.. i mean Virustotal shows ton of viruses.. it is dangerous if it is used in worng way?

dataharvester - April 1, 2015, 12:38 pm

Just downlaoded hope it works good. Only used darkcomet before

Saberrr - April 1, 2015, 12:43 pm

Love the rat, as I love vb.net ^_^.

Would you mind sending me your source? (I'm using vb 2010 - I know there can be compat issues.)
I think I might be able to implement it into a little project I'm making ;)

Anyway, if you'd PM the source code, that'd be great. I'm not going to leak anything, in case you're worried. That'd be a douchebag move toward you if I did. Congratz on making such a good program mate!

Christina Perri - April 1, 2015, 6:38 pm

So anyone know how to get browser passwordsd w.njrat? like a better stealer?

Stikman - April 1, 2015, 6:50 pm

Well

Detection ratio: 47 / 57

Why does it have so many trojans?

Yeah I am new but please no flamerino.

Never mind, I've launched it and it works PERFECTLY !

I can control slave's dekstop ^^ look at his cam, key logs etc.. Very great tool =)

Kalvi6 - April 2, 2015, 8:08 am

Hummm Too many trojan in a simple RAT soft.. I pass.

?Syria - April 2, 2015, 8:13 am

Retards it gets a lot of detections because it is a virus think its a RAT don't expect 0/60 and the stub 0/60

CanisMajoris - April 2, 2015, 8:28 am

All of my antivirus keeps saying this is infected.... is this normal?

I haven't ran this file yet, but if you're scared of a RAT/virus binded, you should get a virtual machine and win 7/8.1 (8.1 is faster than 7 for me, plus i think it's sexier with that flat look).

Also I would suggest get sandboxie

darkwrath505 - April 2, 2015, 5:01 pm

Nice, very stable and lots of features.

I will not stop, as due to the average 45% of cone cells in your eyes being green, green is actually more relaxing to your eyes and you normally see more shades of green than as you do blue and red.

As another user said, the program is used to make a virus, therefore your AV will detect it as one. Just be cautious of where you get the download. There's definitely people on HF with safe downloads for it.

.NET Framework is made by Microsoft brotha, you shouldn't chance downloading it from anywhere else. Google probably turns up some greeeezy, malicious sites like "www.Microsoft-Support-Downloads-NoVirusesISwear.com", lol.

If your rig's got at least 512mb's of RAM and running at least Vista then you should grab .NET Framework 4.5.1 from here:

<https://www.microsoft.com/en-us/download/details.aspx?id=40773>

If you don't want 4.5.1/need 2.0 for a specific reason grab it from here:

<https://www.microsoft.com/en-ca/download/details.aspx?id=1639>

Hope that narrows it down a bit for ya bra, lol.

OH also,

IF the DL link is still down and anyone doesn't want to wait for OP to come online, PM me for my Skype if you want and I'll send you the original .rar I got from here (when OP is back you can compare MD5 hash's and whatnot so you peace of mind knowing I didn't backdoor it, lol).

Hit me up!!

I'm not denying the authenticity of this program, because I've used it many times before. However, whenever I go to the thread author's website Chrome tells me that the website is infected. Also, whenever I download the program Chrome detected the tool as a virus. Why is this happening? I understand partially why the file is detected, however, the website has never been a problem for me.

Also because the site is downloading infected material? njRat makes the 'infections'. Therefore it is classed by most antivirus and chrome as as malware.

This happens with alot of RATs and such.

Or are they all false alerts?

Echo419 - November 17, 2015, 7:57 am

First, you should never scan with Virustotal. It will distribute anything you scan to the antivirus companies. This makes it hard for people to keep anything FUD (not implying Njrat was FUD). Also Njrat has been around awhile and of course it is going to say it is a threat, by its very nature it can do "threatening" things. I've been using it for probably 2 years now and haven't had a problem with it. I trust it, no reason not to.

Hahah sorry then I won't use virustotal again xD

But one last question, how do you open it? Do you use Virtualbox, Sandboxie or just open it without any "protection"?

Echo419 - November 17, 2015, 8:51 am

I've heard people opening it with Sandboxie before. To be honest I had a spare machine laying around with nothing of value on it so I just ran it from the machine, no protection. If someone got into the machine it wouldn't really matter as I would just dump it.

Nice rat! Just to let you know, windows 10 detects it as a virus.

QueueLag - January 23, 2016, 2:52 pm

RAT worked well. But now everytime I run it on VM to see if it works it doesnt work. No connectivity. I have tried 3 different types of Crypters. Boson Light, Diverse Basic and Topher.

Topher in my opinion would be the best crypter to use but unfortunately its not connecting back. I am using port 1604 is that right? or should I try a different port

I don't think anyone really updates the program anymore, would be awesome if a new version came out someday though. Some people have broke off their own versions. I've been using it personally for quite some time and its a great free RAT.

VirtualMon3y - March 31, 2016, 10:30 am

KilerRat is an off shoot of NjRat and is available here on HF. There is also a modded NjRat version 8 out that I found and Armada made a thread for it if you want to give it a go. Password recover is working on it.

Awesome thread tho... This is where I got my original copy. Love Njrat.

I have it working with several Windows 10 test machines. Some claim that since its .Net2.0 that it will not work since its supposedly a feature that needs to be enabled in W10. I am not really sure though, again it works for me. Give it a whirl in a VM.

.net 2.0 is not installed by default in windows 10, chances are it is already installed and the user 99% would click install.

Tested the RAT a bit tonight and i like the dark theme.. but sometimes when i used the remote chat to start a conversation with the client the chat crashes after a while (for the client;not for me) and i have to kill process and restart it rermotely to get it back to work. Another thing is that the remote chat didnt close for my client. When i started a new conversation their was a new windows created for my client. A second one because the first one didnt close. Also fixxed with a restart of the process remotely. But all around a very good and stable free RAT. I was wondering how fast the remote desktop is in comparison to LL or even #.

When i go to save the exe nothing is showing up in the directory where I saved it. I am using windows 10. I'm pretty sure I have turned off a setting somewhere but am unsure which one. If anyone knows what this might be due to please let me know. This is something on my end just not sure what. I turned off settings due to windows 10 location and other things but apparently turned something vital off. Damn. Please let me know if someone might know what that "something" is. Otherwise might have to redo the whole PC.
