jSpy R.A.T. v0.01 Tutorial by [HelpMePI0x](#)

~Table of Contents~

1. Introduction
2. Download
3. Running
4. Setting Up Your Server
5. FAQ
6. Known Bugs
7. Request Help

## 1. Introduction~

Hello, and welcome to my jSpy R.A.T. tutorial. This tutorial is currently for version 0.0.1 of the program and this tutorial is for users running Linux, specifically Ubuntu 13.10, though this should be the same for all users on different version of Linux, Mac, or Windows.

## 2. Download~

Head over to the official jSpy website <http://jstealth.co.uk/jspy/> and scroll down until you see this,

Spoiler ([Click to View](#))

Download the file and extract it anywhere, for this tutorial I'll save it to my desktop. You do not need to extract the \_MACOSX file, you only need the JSpy Release file, feel free to delete the \_MACOSX file if you'd like.

## 3. Running~

After opening your extracted file you should see one file and one folder named libs and jSpy RAT.jar respectively.

Spoiler ([Click to View](#))

Either double jSpy RAT.jar or right click and select Open With OpenJDK Java X Runtime (X will be

different based on your installed java version).

If you get an error that looks something like this;

Spoiler [\(Click to View\)](#)

Then what you have to do is right click on jSpy RAT.jar and go to

Properties -> Permissions -> Check "Allow executing file as Program" and then click close.

Spoiler [\(Click to View\)](#)

You can now open the file by simply double clicking on it and the jSpy client will open up and it should look something like this;

Spoiler [\(Click to View\)](#)

#### 4. Setting Up Your Server~

Head over to the Configuration tab and enter the port that you have opened, by default the port is 3175. Once you've entered your port (or if you opened port 3175 leave it as is) and click Update. You should get a message telling you that you are now listening to that port;

Spoiler [\(Click to View\)](#)

Next we need to head over to the Builder tab, you will see four different boxes that you can enter information in and they are as follows;

Identification - What you'd like to identify all bots that run this server as. Some examples can be, JDB, ewhore, test, etc.

IP/DNS - Enter either your IP or DNS that you'd like the bots to connect to. I'd recommend no-ip for this.

Port - Enter the port that you just set in the Configuration Tab

Save as - What you'd like to save the file as.

For this tutorial I am going to leave all fields as default.

You will also see a checkbox labelled Startup use this feature if you'd like the server to be added to startup. What this means is that whenever the PC that your server is installed on will automatically run your server on startup.

Note: This features currently does NOT work on Linux so I will not be enabling it.

Next just click Build Jar and head over to the folder your jSpy RAT.jar is located in and that will be your server to send to other people.

## 5. FAQ~

Q: Who created this program?

A: jSpy was created by HF's one and only [Zakary](#).

Q: Does jSpy have an official site?

A: Yes it does, the site is <http://jstealth.co.uk/jspy/> and it is the ONLY place you should download jSpy from.

Q: Do you provide help for setting up jSpy?

A: Yes I do, just go down to section 7 for more information.

Q: Are you apart of the jSpy team?

A: No I am not.

## 6. Known Bugs~

To be updated as bugs are reported, feel free to PM me or [Zakary](#) if you notice any bugs.

## 7. Request Help~

If you'd like help downloading/setting up/fixing anything related to jSpy feel free to post here with the following application. Help is given on a first come first serve bases and please do NOT PM me else I will just ignore you.

**Pumpkins** - December 14, 2013, 12:44 pm

Very HQ guide, thank you for this! :)

**iMalware** - December 14, 2013, 12:47 pm

Seems good. I was looking for a release for a rat thats java. Thanks for this thread aswell.

**KuKluxKlen** - December 14, 2013, 12:50 pm

[color=white]Problem: Only works with local host(127.0.0.1), doesn't work with no-ip, "it just spams my logs with someone has tried to disconnect" until I close java in task manager.

[color=white]TV or PM help?: No clue what this means

[color=white]Other: Other people have this problem on windows.

TV means team viewer. Check your PM.

**KuKluxKlen** - December 14, 2013, 1:02 pm

TI;dr

the problem is that the only way you can connect is from local host and not no-ip/yourrealip

I've found the fix for the problem where you can'  
t connect and all you get is "Someone has tried to disconnect"  
When you portforward choose "any" or "both"

Helped me get it working  
Big vouch

**SQamyf** - December 14, 2013, 3:02 pm

Tested on Mac Lion and Mountain lion..

Not latest Java Update but quite up to date..

Executing Server on windows works fine --->all features working

Unfortunately executing (server.jar) on Mac just causes app icon to quickly pop up and close again..

--> for that victim no connection on Client End

Tried with java -jar in Console --> No ERROR MESSAGE ???

What APPLE OS were you running when executing server on Mac and what Java Version..

thx

You'll have to ask Zakary about Mac, he tested it and it was fine for him.

**cnnngwzrd** - December 23, 2013, 8:30 am

Thanks for the Tut. I will go and try it out.

**cYBEROPTICS** - December 28, 2013, 1:24 am

I will post again when on computer. Just saving this thread thanks.

Make sure you open your port to both UDP and TCP.

**VACxD** - December 29, 2013, 5:09 pm

which crypter works with this?

Datascrambler?

**HelpMePI0x** - December 29, 2013, 6:17 pm

Datascrambler?

I don't think there are any decent jar crypters for sale on HF.

**Aless123456** - December 29, 2013, 6:40 pm

Very nice and HQ Tutorial, Thanks:)

**HelpMePI0x** - December 31, 2013, 9:51 am

Thank you, if anyone needs any help just post here.

**bluesky56** - December 31, 2013, 3:37 pm

I tried this RAT. It is working on my computer but when I test it in other PC it is does not work. I opened the port ( 3175) TCP and UDP and I used the Client DUC with No-Ip Account and it is does not work yet.

I have to use my real IP? What I should to do?

Hello, I have a problem with it. Do you offer some support?

Skype: (Antonio.rossi8445)

TV: Yes

RAT Client: jSPY RAT

Problem: It is working only in my computer and not in other my machines.

Thank you

[color=white]Problem: Only working with local host

[color=white]TV or PM help?: ummm?

[color=white]Other: I like it

**mrdivulge** - February 26, 2014, 10:56 am

I have the same problem as bluesky56, it only works on my computer, not on others. I have ports opened.

I didn't quite understand the IP thing anyways, whats that for? Would really appreciate some help here :)

[color=white]Problem: the rat will only work with 127.0 ip, i have checked ports=open checked dns=working and even had anothers help. It worked on his vm, then after that it would no longer work on any computer besides local host.[color=white]TV or PM help?: yes i have tv and pm, dont feel comfortable posting on thread tho :P

[color=white]Other: you can also skype me at WeightlessMods

**Firenet** - September 17, 2014, 7:21 am

Nice tutorial . keep it up . its help people with no knowledge about this RAT.

**DrVoIP** - September 23, 2014, 2:38 pm

i purchase the license key for \$34.99 bucks but the site will not redeem license or allow download?

**giveslife** - October 31, 2014, 12:46 am

i want to buy jspy rat, i need the info on where to buy.

**Umbrella.Corporation** - January 10, 2015, 6:49 pm

Username= Umbrella. Corporation

Dns and port opened and working. Can confirm on can you see me.

Still tho no clients connect.

No anti-virus or firewalls, please pm me or email me Laytonschabert@outlook.com

**ScriptKiddy** - February 27, 2015, 9:53 am

jSpy is not updated often enough, but it i by far one of my favorite (cross platform) rats on HF.

**vladownnz** - March 20, 2015, 7:57 pm

Hey i bought jspy today, im waiting for the acess code and nothing.. any help? how can i contact "Zakary"
