Thread: [Introduction to Command Prompt](#)

.Hack// - December 16, 2013, 7:40 pm

Hello, I'm Drazon. I will be teaching you how to start out with CMD commands, which leads to batch coding. We will go over a few things in this tutorial, some of them being the following.

- Text Colorization
- Basic Commands

First off, if you open CMD and type the following:

Spoiler [\(Click to View\)](#)Quote:color a

The text will be green.

Color list:

a
b
c
d
e
f
1
2
3
4
5
6
7
8
9

Now to the basic commands.

If you type "tree" into your CMD prompt, you can see a listed directory of everything on your C:/ drive.

If you type "cls" into CMD, it will clear the CMD of text.

If you type "title My Test Title" You can have a title appear on the top bar of the CMD window.

If you type "pause" into the CMD, you can pause the prompt. It will say "Press any key to continue." Once you press a key, it will be continued.

If you type "exit" into the prompt, it will close the prompt.

As long as you don't make tutorials on "Batch virus's" Then great job.

I beg to differ, a well coded batch script can do a lot of harm to one's computer. Don't underestimate .bat files. There is still a hotspot for technically unsavvy people that don't know about .bat files.

I always made batch scripts that infinitely looped and opened command prompts on the computers at school.

Don't ask me why, I really don't know.

I have had the opportunity to do that. I brought an auto executable usb to school and ratted computers instead.

blackhat2278 - December 17, 2013, 7:33 am

Where can I get a legit RAT program without a virus?!?!

Sajuuk - December 17, 2013, 8:44 am

Uhm, it's fine I guess. As long as its not a batch virus or editor. GL.

I got an idea. How about you both stay on topic? Especially on your own thread, Drazon.

Orianthi - December 17, 2013, 11:16 am

Nice intro. But could use a few examples of batch and output. Like:

Code @echo off

rem <This is just to make it silent>

color 0a

rem <Gives us Black background with green text 0= Background a=text>

title My special batch :)

rem <Self explanatory>

echo I Printed this.
Rem <echo prints words.> Examples like these.

Mochizuki6661 - December 17, 2013, 11:22 am

Great tutorial for those who don't know much about how to use command prompt. Thanks for the share.

What I'm saying is, he isn't even in the correct section. He didn't make his own thread. So instead he comes here, and spams up your thread.

taloneyes - December 17, 2013, 6:34 pm

Nice basic/simple tutorial. Will you be releasing any more, such as intermediate/advanced ones?

Keep it up and cheers!

You act like Batch scripting is hard :(Stahp

taloneyes - December 18, 2013, 6:19 am

Once again, nice tutorial but wouldn't you add "0" -- black as a color?

I could be wrong, if I am sorry.

Cheers!

In a way, that could work. Thanks for the reply!

Literally everywhere on HF. The search bar is really useful.
