Thread: [\[The Brotherhood\] Mining Setup Help Desk | Want to Start Mining? We can help!](#)

Cryptic™ - December 17, 2013, 9:04 pm

[img]<http://i1.minus.com/iLbdJjhOluAEW.png>[/img]

Well I've been seeing numerous posts in this section about people having issues mining, or do not know how to set it up even though there are numerous tutorials in this section.

Anyways I'll be happy to assist you.

I can setup everything for you via TeamViewer.

You can get it here

<http://www.teamviewer.com/en/download/windows.aspx>

Just post your questions in this thread, if you want TV Support shoot me a PM.

I will be adding more to this thread later on, and I will be online for the next few hours.

I will also be adding a list of authorized users to provide TV Setup Sessions tomorrow.

FAQ

What do you need to mine?

You can mine with either a CPU or a GPU.

What Operating System do I need to mine?

You can mine on any operating system (Windows, Linux, Mac).

The best would be Linux, but Windows is commonly used.

More will be added soon.

Should I solo mine or join a pool?

Solo Mining is not profitable unless you have a lot of power, you will be better off Pool Mining and getting shares for your work.

How can I find out how fast I Can mine?

You can check your CPU or GPU for Scrypt Coins here. Scrypt coins are coins like OmniCoins (OMC), DogeCoins (DGC) and so on.

https://litecoin.info/Mining_Hardware_Comparison

Common Conversions in the Mining World

1 000 H/s = 1 KH/s (Kilo Hash)
1 000 KH/s = 1MH/s (Mega Hash)
1 000 MH/s = 1GH/s (Giga Hash)
1 000 GH/s = 1TH/s (Tera Hash)

Where can I get a miner

You can get them right here www.ub3r.org/m/setup.zip

I setup a package that contains all the CPU/GPU miners for AMD/nVidia cards.

we r num 1 - December 17, 2013, 9:06 pm

Looks like a nice professional and helpful service! Will come here in the future!

Gary - December 17, 2013, 9:09 pm

Helped me out. Told me my laptop will die but it's the truth. Great service took about 5 minutes to setup!

sannu3250 - December 17, 2013, 10:21 pm

i will use this service in future .. thanks for the service ..

?ain - December 17, 2013, 10:28 pm

This isn't directly mining, but related to it. How exactly would I go about setting up a P2Pool, or if there's a better type of pool, which should it be? I'm going to use a botnet, and a few others', but I cannot figure out how to go about this. It will be for Script-based coins, and I'd also like to know how to choose which coin to mine, like if I wanted to swap from LTC to WDC or some other Script-based coin.

vqs - December 17, 2013, 11:15 pm

How to mine any new altcoin that comes into the market? If I want to mine a new coin, I have to spend a lot of time finding a miner for it and look for a pool to mine, what is the general rule to mining any altcoin ?

Cryptic™ - December 17, 2013, 11:17 pm

vqs Wrote: [\[CITE\]](#) How to mine any new altcoin that comes into the market? If I want to mine a new coin, I have to spend a lot of time finding a miner for it and look for a pool to mine, what is the general rule to mining any altcoin ?

Just download the wallet and solo mine.

If you want to use your GPU then you can download one of the other miners and use that.

3dVision - December 17, 2013, 11:39 pm

Well the FAQs helped me quite a bit, thanks for taking the time to make this Cryptic! ?

Dorian Nakamoto - December 18, 2013, 12:06 am

(Dec 18, 2013 12:15 AM)vqs Wrote: [\[CITE\]](#) How to mine any new altcoin that comes into the market? If I want to mine a new coin, I have to spend a lot of time finding a miner for it and look for a pool to mine, what is the general rule to mining any altcoin ?

setup the config file. Open the the Qt for the coin. Aim the miner towards 127.0.0.1 using the username and password provided the person who setup the coin. Then if you are lucky you might solve some blocks.

Chilluminati - December 18, 2013, 12:40 am

mining whit a r9 270x whit 400Khash rate..

if i would get 2x r9 270x how much will it increase?

thanks in advance

-r34lx

Dorian Nakamoto - December 18, 2013, 12:47 am

-r34lx

That seems roughly the typical hashrate for a R9 270x what commands are you using in your bat file?

If you get a second one you should get double the hashrate so 800kh/s provided they are both cooled well.

Zeon - December 18, 2013, 12:58 am

I'm getting this error: <https://hackforums.net/showthread.php?tid=3931925> (json_rpc_call failed) any experience with this error? I've tried have people solve it over TV but to no avail

Chilluminati - December 18, 2013, 12:59 am

I would recommend looking up your exact card model on this page

https://litecoin.info/Mining_hardware_comparison

and use the config they have.

Then you can play around with increasing the intensities and thread concurrencies.

Zeon Wrote: [\[CITE\]](#) I'm getting this error: <https://hackforums.net/showthread.php?tid=3931925> (json_rpc_call failed) any experience with this error? I've tried have people solve it over TV but to no avail

I have sent you a pm for your TV info

Zeon - December 18, 2013, 1:28 am

OP solved my issue and its now working properly, thanks a bunch!

EziNet - December 18, 2013, 1:32 am

Can you help me mining in Mac? i don't use Windows :/

<http://www.asteroidapp.com/>

Just install that and connect to a pool of the coin of your choice and you should be mining in no time.

I do recommend that you install Linux on a usb and boot into that, and mine on that (You will get more khash/s)

Dorian Nakamoto - December 18, 2013, 2:02 am

Plus does other factors too affect the mining process like net speed?

Nope, the only thing that could influence your mining is the ping. If it's too high, people could submit shares before than you. But we're talking pings like 1000+ ms.

Oh and be sure to use the right drivers.

Crypto™ - December 22, 2013, 3:04 am

(Dec 22, 2013 02:42 AM)iHunt3r Wrote: [\[CITE\]](#) Thanks for the suggestion.I'm gonna buy a rig soon as you've suggested in that thread.

Plus does other factors too affect the mining process like net speed?

If you're dealing with dialup speed internet, you'll have a lot of stale shares, which are submitted shares that aren't relevant to the current work anymore.

Also, for graphics cards, there are configuration settings that have to be set to maximize the card(s)'s efficiency, though that depends on the cards, and often times the card info can be found on either the Bitcoin (although GPU mining Bitcoin is pretty much useless nowadays, since it's an ASIC dominated market, which is preconfigured) or Litecoin wiki pages comparing mining hardware, or you can ask on the Forums as well.

Guardian™ - December 23, 2013, 4:29 am

Hi.

I am mining protoshare, dogecoins and omnicoins with 3 computers:

computer 1 and 2:

RAM: 64GB

processor: Intel® Xeon® CPU X5680 @ 3,33GHz, 3326 Mhz, 6 Core(S), 6 Logical Processor(s)

processor: Intel® Xeon® CPU X5680 @ 3,33GHz, 3326 Mhz, 6 Core(S), 6 Logical Processor(s)

System type: x64 based PC

Operation system: Windows enterprise

Graphic card: Nvidia geforce 660 2GB

computer 3:

RAM: 64GB (128GB Total Virtual memory)

Operation system: windows enterprise

Graphic card: Nvidia GeForce GTX 560 2GB

processor: Intel® Xeon® CPU E5-2687W 0 @ 3,1GHz, 3101 Mhz, 8 Core(S), 16 Logical Processor(s)

processor: Intel® Xeon® CPU E5-2687W 0 @ 3,1GHz, 3101 Mhz, 8 Core(S), 16 Logical Processor(s)

System type: x64 based PC

I am currently getting this:

Computer 1:

Protoshare: Collisions/min: 228 (share value/h 28)

dogecoins: 54.78Kh/s

Computer 2:

Protoshare: Collisions/min: 228 (share value/h 28)

omnicoins: 56Kh/s

Computer 3:

protoshare: Collisions/min: 400 (share value/h 76)

Is this good? how much money will i earn after one week?

Am i running the computers as good as they could be or can i max them even more to mine more?

should i mine other coins to earn more or are this good?

(i don't pay for power)

thank you in advance for the answer ^_^

That seems about right for a Nvidia card. To be completely frank with you, Nvidia cards are terrible for mining essentially every coin. Even still 50kh/s on a script coin isn't a terrible hashrate, but it's unlikely to make mining worth your while.

You might be able to squeeze some more juice out of them if you overclock them, but then you'll have to deal with protection from overheating, so I wouldn't recommend it. The only thing that might boost your hashrate a bit is making sure all configuration flags are set correctly.

Actually, now looking into it, you should be able to squeeze twice the power out of the cards. However, mining two coins on the same computer will divide that power back to roughly where it is,

so that may be right.

Be sure to find your cards, or a comparable one on [The Litecoin Wiki](#), since that's a script coin, and set the flags specified in "config" along with the suggested miner. (CUDAMiner)

Swirl - December 23, 2013, 9:53 am

What are some good PTS mining pools that are fairly botnet friendly?

Crypto™ - December 23, 2013, 1:39 pm

(Dec 23, 2013 10:53 AM)Swirl Wrote: [\[CITE\]](#) What are some good PTS mining pools that are fairly botnet friendly?

There are relatively few options for PTS mining, and most of them would likely ban botnets. What you can do, however, is set up a stratum proxy server for your miners to connect to on your own, which will mask the traffic, since there'll only be a single stream outgoing to the pool.

<http://mining.bitcoin.cz/mining-proxy-howto>

Sure, you could rely on the pool's stratum proxy, but they can see that traffic.

I want to build my own rig, I have about everything I need. Not going into detail with it but: I have the "Case" Some Graphics cards, A motherboard a cpu and a watercooling set up, Can I use the watercooling setup on this somehow? Or just use fans? Also Do I need a harddrive or Can I use like a bigger usb? Also tips?

Dorian Nakamoto - December 23, 2013, 1:47 pm

You can run bamt off a 4gb usb. If you want windows you need a HDD. You shouldn't need water cooling unless your temperatures are really high. It is just like building any other PC. Make sure everything is checked before you power it on.

Not familiar with BAMT, what about DSL- Damn Small Linux on a USB with the miner running?

Dorian Nakamoto - December 23, 2013, 1:56 pm

(Dec 23, 2013 02:53 PM)Topdog13 Wrote: [\[CITE\]](#) Not familiar with BAMT, what about DSL- Damn Small Linux on a USB with the miner running?

If you can compile cgminer and the necessary video drivers then go for it. All of that is already done foy you with Bamt.

??Zèp* - December 23, 2013, 1:56 pm

You can't use your integrated media card, as they automatically get disabled when you plug in an actual video card, + That would technically be cpu mining.

??Zèb* - December 23, 2013, 3:33 pm

I'm sorry I don't see a place to plug in my actual video card I have... I think I can only use the integrated one.Integrated cards are not real video cards, so you can't use them.

Your only option is to CPU mine which is not profitable.

How much do you think i will be making a day/week/month with this rig?

Thanks in advance

Not worth it, cheaper to build your own rig.

Also

If you mine LTC,

Days to break even: 182.89 Day(s) (can vary greatly depending on the current exchange rates)

And you will make ~ 32\$/day at current difficulty.

ClosedAccount - January 1, 2014, 5:03 pm

What do you suggest. How much do you think i have to invest to purchase. What to purchase and how much do you think we can make a day.

You can pm me or skype we can talk

A miner is just a motherboard with some GPU's on it running some software. Lol

You can see how many KH/s your GPU will get here

https://litecoin.info/Mining_hardware_comparison

And then you can use a calculator to calculate approximately how much you will make

<http://www.coinwarz.com/calculators/litecoin-mining-calculator>

-Lakai- - January 4, 2014, 4:36 pm

I have about \$200 to spend and I was wondering if this is a decent card to get? I will just be used for script mining along with my xfx 6850 which is giving me 258 kh/s.

<http://www.newegg.com/Product/Product.aspx?Item=N82E16814202050>

<http://www.newegg.com/Product/Product.as...6814202050>

To be honest investing in that is a terrible idea.

Not worth it.

Save up ~ \$200 more and at least get a 7950 (~ 630 kh/s) or a 280X (~ 700 kh/s)

If you can't afford those cards, it's better to just buy the coins while their cheap and hold on to them and sell them later for profit.

-Lakai- - January 4, 2014, 4:51 pm

You can buy what ever you want

https://litecoin.info/Mining_hardware_comparison

You can use that list to find the best one you can afford.

R9 280X Toxic's by Sapphire are good for cooling

Gigabyte/Asus have the highest hash rates.

ajent - January 13, 2014, 6:53 pm

My job requires me to work on the road 100% of the time and stay in hotels. Power is included in the monthly cost & many of my co-workers fill the buildings so the hotels won't question anything.

I'll be purchasing a new gaming unit soon, with AMD Radeon HD 8990 6GB GDDR5 - Dual GPU Card. I haven't seen what kind of numbers it could do for mining, but that would be a temporary thing.

If a good idea, then I would like to get some kind of thing like i've seen others have, multiple video cards on a board, unless a full mining rig is more recommended. Would \$3,000 be enough to get started with good mining numbers?

If i'm too late for bitcoin, would litecoin still be profitable to mine from a machine that would cost < \$3000 & free power?

Thanks

Cryptic™ - January 14, 2014, 6:36 pm

This helpdesk is still open and I can set stuff up via TV when I get time.

RoLLs Ro?CE - January 14, 2014, 6:59 pm

Great user I must say! Pm'd him about setting up an LTC miner and he was done in under 5 minutes over TV. This guy definitely knows what his doing and I recommend anyone whose just starting out like myself to seek this persons advice. Thanks mate!

You have 10 GPU's...so you would need at least two motherboards.

I recommend the

2 x ASROCK H81 PRO BTC Motherboard

<http://www.newegg.com/Product/Product.aspx?Item=N82E16813157471>

It is currently out of stock but you can find it else where, and NewEgg restocks on it every few days since it is the most popular motherboard for mining.

4GB Ram is the minimum per rig

Keep them in a cool place and I'd recommend using a box fan for additional cooling/airflow

<http://www.homedepot.com/p/Lasko-20-in-3-Speed-Box-Fan-3733/100405665>

You should get a USB and put BAMT on it <https://litecointalk.org/index.php?topic=2924.0>

Alterations - February 14, 2014, 7:33 pm

Alright and the last thing that, what about Power Supply?
An R9 280X uses 350 - 400 Watts.

To be safe you should run a maximum of 3 cards on a 1500W PSU. (If you scroll through this thread people recommend it as well

http://www.reddit.com/r/litecoinmining/comments/1sxefh/huge_amounts_of_trouble_with_6x_r9_280x_rig/)

So you would need at least 2 1500W PSU's per motherboard which would require you to buy this

<http://www.ebay.com/bhp/dual-power-supply-adapter>

WreckfullTM - February 14, 2014, 8:14 pm

anonymous233 Wrote: [\[CITE\]](#) Hey there,

im having some questions of mining - just for the start, are you only can support me if im mining on my own pc? cause im planing like buying 500 loads and mine with them via PlasmaRAT - how much money i could make if we say the bots will be mid qualiti or higher?

I mean if most time 300 are online and i will let it run 24/7 :D

Would be nice if you could answer me some questions too if you know about RAT-Mining
Can post you skype too if wanna, would be great if you reply

Ano
Depends on the quality of the load. You should get at least 5kh/s per bot even on a crappy bot. So do the math.

You can get them right here www.ub3r.org/m/setup.zip

I setup a package that contains all the CPU/GPU miners for AMD/nVidia cards.my chrome tells me this is harmful for my PC... is it?

if i invest 1000 euro's in a mining rig(best to get according to you). and i start mining bit coins. in how much time will i have earned everything back with the current prices on BTC?

Most antiviruses flip out over miners, since some malware bundles it in. But no, this miner's fine.

And that's very dependent on a number of factors.

Honestly, it looks like the only rig that's you can really break even on is \$6000 USD.

<http://bitcoinwisdom.com/bitcoin/calculator>

But Cryptic™ may have more insight than I on this.

The files I posted are clean. As Crypto has said above, most A/V's will give false positives.

I've been looking at starting mining, now seeing this thread I appreciate info shared here. I'm wondering which

pool would you guys recommend i join lets say i want to mine litecoin.

Kellers - March 11, 2014, 9:45 am

Cant send PM yet but I really really want to learn how to do this mining! Hope you can pm me your skype or other contact details! Thank you so much!
