I don't know Vb8 :P. If you want them in VB8, take some part of the source and convert it in a C# to VB8 converter.

You're welcome.

I used the ICSharpCode.TextEditor component in the programmer notepad :

<http://www.codeproject.com/KB/edit/TextEditorControl.aspx>

It's eazsy to use and it comes with some xshd files (The syntax highlighting definitions).
