meghindo - May 10, 2010, 6:18 pm

it took me a whole day to document on things but I did learn now the basics of it & how to's

what can I say...curiosity killed the cat & at the end of the day I still didn't do it all right cose I don't recive any logs,it worked with another keylogger till the person got suspicious on it & deleted it & was using a basic keylogger with no melting or enhanced features whatsoever & then using the 541's keylogger I built that server under a screensaver decoy but even tho I passed it out I didn't recive any logs either :(whichs sucks but oh well,at least I can check my gmail lol
