Kingo would probably be the best way to root it. Simple, and it doesn't trip KNOX, so you will keep your warranty.

Kingo is a Chinese software that is legitimate but does send IMEI numbers to a random Chinese server.

What is your device?

Are you stuck in Odin mode? You'll need to flash your device with the stock ROM. (May be able to get by reinstalling it with the Samsung Kies)

Try restoring with the Samsung Kies software like I said, flashing stock ROM. (Which is possible)

You can flash stock ROM with the Odin software too.

I'm so sick of hearing this 'brick' BS. If you can do ANYTHING with the phone, it's not bricked. If you can turn it off and on, or do any interaction, IT IS NOT BRICKED. An example of a 'bricked' phone is a phone that does not react to charging, power buttons, home buttons, or anything of the sort. Useless like a brick.

If the device is hard bricked it will require a JTAG.

Don't let your pet peeves get to you.

As already stated, you can either flash stock or use kies, there are the only possible solutions.
Let me know if you're still unable to get it through, i'll be happy to help.
