Thread: [\[SOLVED\] Technipad 10G stuck in Boot / No recovery-mode \[/SOLVED\]](#)

**t.pro** - December 20, 2013, 5:03 pm

My Problem was:

Spoiler ([Click to View](#))

Hey guys,

i bought an [Technipad 10](#) with android 4.1.1 (its an new lil german one). i bought it not new.

Now Device hang in BootLoop --> nothing happend for minutes --> device reboot and then the os loads (dont know why) i see the bottom menu and a few app notices that they where closed (mainly skype)...i can do nothing - if i click ok for the message - it shows again!

device is not rooted and no custom rom

Answer:

Yes i have a soloution BUT:

- i didnt flash image/system
- i dont know if rk30 images are working

I managed to get it to work with same solution as for RK30-Devices (mostly unknown manufactures, china). My problem was the bootloop. i managed to kick it out with the RK30-Tool.

but I DONT USE A IMAGE FOR THOSE DEVICES. i flashed a new boot-rom and that was the problem. now device works with factory-android!

be aware, it was a hard journey. i wouldnt do this "only for a new android version" ?  
(but if you want to read something about this, start here:

<http://forum.xda-developers.com/showthread.php?t=2414994>)

cheers!

Do you own a fastboot cable? If so, try that

**t.pro** - December 21, 2013, 1:46 am

no i dont have - is there any other chance?

Is there any way to flash something via SD-Cart?

If the PC is able to recognize the device I would think you could flash your system again.

yes i think too. the problem is as i said: i never flashed it before. i have no rom for it.  
can somebody explain me how to flash a unknown device with an android (software and android image)??

that would be great!

basically some apps stress i think, is it possible to delete some apps via pc-tool? or read the actual image out --> modify --> flash back ...is there any tool for that?

( i googled a lot and all roms are espescally for some devices - i found no general method or something.

Did you find a solution? I want to upgrade my TechniPAd to Andriod 4.1.2 but how?
