Thread: [\[MUSTREAD\]\[NOOBFRIENDLY\]HOW TO CHECK IF YOUR SERVER IS WORKING\[100%SAFE\]\[100%WORKING\]](#)

DarK-D3v!L - December 21, 2013, 6:53 am

How to test if your server works ?

Hello hackforums , I see many members here asking for someone to test their server to check if everything works great , I will show you this very simple , fast and totally safe method to verify if your RAT server works good ...

Requirement :

- a RAT
- Portforwarding must be , of course , perfectly OK
- your server (non crypted)
- a simple website with online sandbox : <http://anubis.iseclab.org/>

Let's start this server test ...

Open your RAT client , be sure to listen the port you portforwarded , be sure your DUC Client is open and updated , then everyhtng is ok you will ONLY need to launch a scan from the website : <http://anubis.iseclab.org/>

So , for that test i used Pandora-RAT , but it will works wth any other server of course , now submit your server to this scanner by clicking "browse" and select your server then enter the captcha then hit "submt" :

Your file will be uploaded and scanned ...

If your server works you will be notified that youhave one connectons in your client :)

Sow now , you are perfectly sure if your server is really working or not , this method is more safety than sandboxie because there is nothing to do with your computer , everyhting is done from the anubis site.

But be aware of one thing :

When you scan a server (yours or not)on this website , the scanner will check and analyse all activites from the sample you provided , go to the bottom of the rapport , you will see "network activities" and "DNS Queries" , this option is really usefull to analyse a malware but when you will test your own server your DNS and IP will appears on that DNS queries result :/

You are now able to test if your server are perfectly working or not , check if your startup is good too

and test everything with an online and totally safe sandbox .

I hope this noobfriendly tutorial will help all the beginners in RAT who are asking for server testing, this method is really simple , fast , efficient and perfectly safe for you :)

Best regards
?

Hey,

pleas make the "Server (not crypted)" LARGER!
Newbies will upload their crypted server there!

cYBEROPTICS - December 22, 2013, 11:54 am

This is a very nice tut for beginners! Great work man!

Thanks you a lot , english is not my main langage so i tried to do my best :)
Really happy if you like it and it this tutorial has been usefull :)
Thx again and best regards

nicodim - March 17, 2014, 5:35 pm

Thank you works great, can you provide a tutorial for the sandbox method too ?

Thx again and best regards

Really? You did a great job. Nice tut and I would have never guessed english wasn't your native tongue

Ezrik - March 18, 2014, 12:55 pm

I uploaded my stub to the site and after 8 minutes of it doing its thing i didnt get anything on my cleint. Whyyyyyyy. When i run it on my comp it shows it working (Not on my client but in TaskManager) why wont it work?

DarK-D3v!L - March 18, 2014, 1:17 pm

Beacue you ran a server on yourself , and the port you chooe i now used by you a slave ^^ never test a server on yourself if you don't know what you are doing

best regards

Ezrik - March 18, 2014, 1:28 pm

(Mar 18, 2014 01:17 PM)DarK-D3v!L Wrote: [\[CITE\]](#) and the port you chooe i now used by you a slaveCan you explain to me what this means?

fizzzttn - March 18, 2014, 1:45 pm

i think he is saying that if your on the same network trying to use the same port it wont work not for sure but thats what i got from the statement

Darc - March 18, 2014, 2:08 pm

I can vouch for this method. This is very helpful. Just warn some of you that this site sometimes doesn't work.

Ezrik - March 18, 2014, 2:10 pm

Ya i made a whole new stub and tried it again on the website and it aint working. Oh well

?ain - March 18, 2014, 2:14 pm

Better to upload on <http://malwr.com>, as it doesn't distribute.

(Mar 18, 2014 02:10 PM)Ezrik Wrote: [\[CITE\]](#) Ya i made a whole new stub and tried it again on the website and it aint working. Oh well

If it only works on you, its because your ports aren't properly forwarded, or the port is busy because the stub is using it so your client can't listen to it.

Ezrik - March 18, 2014, 2:22 pm

It Dosent work on me, at least in the client. Also i made a new stub without clicking on it and its still not working on either website. As far as im aware the Portforwarding is right. Care to TV?

Expels - March 18, 2014, 7:38 pm

Why give it to Anubis? You give them a file to scan and distribute to AV companies?

DarK-D3v!L - March 19, 2014, 1:50 pm

(Mar 18, 2014 01:28 PM)Ezrik Wrote: [\[CITE\]](#) Can you explain to me what this means?
sure ...

lets imagine you use darkcomet and you use the default port 1604 , then you run the server on yourself , you will use the port 1604 as a slave , not as the botmaster" so you will be unable to communicate with the others servers because this port will already be in use :)

Best regards

Spartan. - March 19, 2014, 3:27 pm

Worked for me! :) Nice TuT. Im going to bookmark this.

Does this work a second time? Because I attempted to go for a second try nothing showed up. First try everything was fine.

Trap Drugs - March 19, 2014, 3:59 pm

Site has a decent bit of downtime but it is good just as others said any proof it doesn't distribute our files?

jarobi - March 19, 2014, 4:13 pm

(Mar 18, 2014 07:38 PM)Expel?™ Wrote: [\[CITE\]](#) Why give it to Anubis? You give them a file to scan and distribute to AV companies?Its a non crypted file which u uploading....

Spartan. - March 19, 2014, 5:05 pm

Edit: yes the website is down sometimes thanks.

3nterman234 - March 19, 2014, 6:23 pm

I had my own that didn't distribute. Sadly I can't afford web hosting anymore since my paypal locked me out :/

DarK-D3v!L - March 20, 2014, 2:18 am

if you read the thread , you will see i was talking about a NON CRYPTED file ...

;)
