PrivateCrypt

[Video: <https://vimeo.com/82514063>]

What is PrivateCrypt ?

PrivateCrypt isn't crypter for make fud your server.

PrivateCrypt is a software like TrueCrypt but better in some thing.

-> He can crypt only file(s) you need like account.txt, photo.jpg

-> You can use one password for all files or one password for every file.

-> 3 Level of Encryption. (better encryption is more slow to decrypt)

-> Boktill & AntiKeylogger (you can write your text with PrivateCrypt, and write your password with protection. Nothing can steal your password in PrivateCrypt with Botkiller which kill & delete every malware in your computer. AntiKeylogger make encrypted input with PrivateCrypt. Even if someone install rootkit it will get Log(s) like "EkZjsixsoPDkg45=/dsq" which is totally useless.)

Why use Private Crypt ?

You want keep all your account steal in Text file ?

But what happen if you get ratted ? You loose all ? Yes.

But with PrivateCrypt you can keep all your account in .Private File.

Read & write with password data easy. If someone grab your file account.txt it will get encrypted file which is useless :)

Protect your data on internet.

Don't use feature "remember me" when you use webbrowser like chrome or firefox. You can get steal by password stealer.

PrivateCrypt can make file which keep all your account information encrypted with your unique password.

You need only now to known only "one password master" for get all your password.

This password master can't be steal.

Protect data from the gov & spy.

Sometime you want get your file unreadable when you don't have control over your computer. (children,mother,investigation)

PrivateCrypt can crypt any type of data.

Data will be show like "corrupt" but it's wrong, data is recover when you put the right password.

How download ?

You can get this software here: [PrivateCrypt - FREE !](#)

PrivateCrypt is clean look here:

<http://r.virscan.org/report/52243cf808d46b25319f60df7ccd6045.html>

Information: Working on all computer from Windows XP to Windows 8. (virtualBox / vmware don't work)

mumbot123 - December 23, 2013, 3:25 am

Virusscan please or else no one will download this.

PrivateCrypt is a software like TrueCrypt but better in some thing.

Read before you complain.

Nice, its working really well.

elmedoc - December 24, 2013, 12:18 pm

Thanks you makaz.

If enough people like it i think improve privateCrypt

br0ck - December 24, 2013, 12:23 pm

Download link dead, fix it please!

limit

elmedoc - December 24, 2013, 12:26 pm

<http://rghost.net/51152881>

Link isn't dead..

Maybe you get problem in your country with rghost.

Other link on bayfiles:

<http://bayfiles.net/file/12qIR/1CVTQ3/PrivateCrypt%281%29.zip>

eXplode. - December 24, 2013, 1:04 pm

wow thank you very much! Is wonderful

elmedoc - December 25, 2013, 3:09 am

No problem guy and enjoy this tool....;)

Shiiza - *December 25, 2013, 6:32 am*

Downloaded may be useful in future.

KEep the gud work up.

AND MARRY CHRISTMAS!

elmedoc - *December 25, 2013, 6:48 am*

@KillerHawx

Thanks you and marry christmas to you ;)
