If you are, there's many ways to make profit. You could have donator ranks on your server for one.

You have to compete with other businesses, w/o that, what's the point of having something that is the same as everybody else? ?

As the founder, I didnt even know this thread was posted lawl.

Also, as a deal for HF members, once you buy your server, we will give you 50% off the second month. (Just open a ticket requesting it)

Also, It would be funny if I vouched, but whatever, I vouch for my own product lawl.

Peter - December 23, 2013, 7:03 pm

How are you even profiting with such prices?

Unless you're placing more customers on the one server then needed so 8x 4Gb ram clients on your one server then those prices are ridiculous.

If this goes somewhere, best of luck guys, best prices I have seen ever.

No sir, 4gb server, no just no. We have way more WAM than that, and limiting the amount of customers per server, just really started this so lawl.

Donkey1000 - December 23, 2013, 7:10 pm

Omg those prices are so cheap! Are the prices limited time or are they always going to be here?

I really don't think you understand ???

I'm asking, if you have say a 16Gb ram server and you have placed 6x 4Gb ram servers so you can fit more clients on the one server meaning profit because at the end of the day, not every client will use all their allocated ram which spreads it out to other clients as well.

Oh sorry sir, I get it know. And no. We will never shove to many servers on one dedi. Ever, never ever will!

Okay I understand so how do you fit two bedrock servers onto one say 16Gb server and still make profit?

I know a lot of hosts do what I said so I just want to know how you guys don't over fill the servers and still profit?

At the moment, our dedi's are so cheap, that once our server get's full, we just buy a new dedi, thus making a whole new server.

We will NEVER oversell. I always hated that, and I will not do that to my customers.

ATM, we have MASSIVE servers, which are way more than 16gb ram, so I dont see a problem in the near future.

What data center would sell a dedicated server for 'so cheap'. I mean, OvH Sells their 16Gb ram servers for \$49-\$70. So if you were to sell 2 bedrock packages you wouldn't even make profit.

Unless you found a provider cheaper then OvH? Massive servers, even then, the Gb/Ram add up.
