Thread: [is it possible to boot a gmod server](#)

biomassacre - December 26, 2013, 2:19 pm

i really want to DDOS or something a gmod server but dont know how i can ive used a few booters but when i try it doesnt even lag the server i dont know if im just not putting in the port right or what???

can someone help me

sorry if this is the rong forum i dont know hwere to post it

ThaTr1kz - December 27, 2013, 1:43 am

GMod servers have a feature that works as an anti-ddos. Basically, after 5 heavy connections from an ip it blocks the ip for 30 minutes/1 hour.

I don't think its actually possible to ddos a gmod server. Maybe the only way is get a team of 100+ players that point the ddos using 1 connection only. This will avoid the ip to get blocked and the server will probably crash.

DeskGotBars - December 27, 2013, 2:56 am

Wrong section, move this to "Beginner Hacking" Idiot.

MrBane - December 27, 2013, 5:21 am

Yes you can but it's not free. If you're interested in just send me a PM.

?ă?ž?@ - December 27, 2013, 11:30 am

Gmod servers are hosted by high end companies with good ddos protection even with 80 gigabits you wont be able to take one down, ive tried already.

Pink. - December 27, 2013, 11:32 am

I can take them down easily, isn't hard.

?ă?ž?@ - December 27, 2013, 11:33 am

If the server is home hosted then you will be able to take it down. Most gmod servers are hosted by NFO <http://www.nfoservers.com/>

Rackzen - December 27, 2013, 11:38 am

Well , as i know , you only have to know the ip of server , and just run the attack .. :o

Migael - January 5, 2014, 9:19 am

It's possible when a person's hosting it on his own pc or something like that

Mentalist14 - January 6, 2014, 12:01 am

should be able to unless they have protection

Crake - January 6, 2014, 12:01 am

Should be able to using a UDP flood.
