Thread: [How to remove watermarks/unwanted](#)

Phyxcists Mate - December 27, 2013, 6:13 pm

This is my first graphics tutorial I will be showing you how to remove watermarks or unwanted text. You can also use this to remove objects from a image.

STEP 1

First you want to get the image you want to edit.

In this case i will be using this Razor background and I will removing the text I have highlighted in the screenshot below.

STEP 2

Next you want to select the "spot healing brush" as seen in the image below.

STEP 3

Now you have the spot healing brush selected you want to make a neat area around the part of the image you want to get rid off.It is hard to see on the image where the spot healing brush is but it is strictly only on the text. You want to keep it as accurate as you can because Photoshop uses the surrounding of the area selected to make the change blend in and look realistic.

STEP 4

After you have completed step 3 correctly you will see that the area you selected has been removed and it looks like the image has never been touched.

REMEMBER

Always accurately select the area you want to remove with the spot healing brush for the cleanest and most realistic finish.

Thank you for all for reading this tutorial. If you have any feedback you want to give me about this tutorial feel free to leave a reply.

Bovril Coin - December 27, 2013, 6:16 pm

or make a box and fill with content aware much faster but nice tut

Phyxcists Mate - December 27, 2013, 6:18 pm

Yep there is two ways to do it. But i prefer to use the spot healing brush as it is circular and can be used in different situations than the content aware selection. Thanks for the feedback :)

ASSHOLE DICK - December 27, 2013, 6:32 pm

Good post man, stay HQ. Content aware would have been much more fast and efficient though.

Phyxcists Mate - December 27, 2013, 6:41 pm

Thank you for the feedback Toki. I use content aware in most cases but I wanted to show off what the spot healing brush can do and familiarize people with the other tools available in Photoshop.

Good tutorial. Many people will be benifitted with this!

Devote - December 28, 2013, 10:09 am

Pretty stupid, it wouldn't really work if the background wasn't black. Do a water mark that is actually on an picture.

here is your challenge:

<https://encrypted-tbn3.gstatic.com/images?q=tbn:ANd9GcTzOkIYasXW0Z5EMoRn7L9PqiRGoC8F4Nkj-JtfSdQVbID0aGLE>

Good Luck.

madcat45678 - December 28, 2013, 10:19 am

Thank you very much for the tutorial

[Nkj-JtfSdQVbID0aGLE](#)

Good Luck.

My attempt

Devote - December 28, 2013, 10:30 am

Either way guys congratulations you showed me up! :D

I didn't think you could do it. I am sorry for dissing the method.

?lex - December 28, 2013, 12:01 pm

This is too basic.. You can even cover it with your brush tool.

But in either way, it's a good contribution.

Benon - December 29, 2013, 9:21 pm

Thanks so much for this. Very informative. I'll check to see if this works for me as I'm new to this kind of thing lol. i'm a nub.

PHGreyHacker - January 2, 2014, 7:46 am

THANKS TO THIS MATE! NOW I CAN MAKE MY OWN COVER PHOTO BUT I WILL PUT A CREDITS TO AN OWNER OF THE PHOTO! HAHA! THANKS AGAIN MATE! JUST KEEP SHARING TUTORIAL ABOUT PHOTOSHOP! :D

Dropbox - January 2, 2014, 7:49 am

this is a very useful tutorial, thanks for posting this
i am sure people will find this helpful

Corrupt. - January 2, 2014, 10:12 am

Okay, sorry to burst your bubble but that was almost TOO easy. go on istockphoto and remove that watermark and THEN make a tutorial. Because im sure you could of just covered it with a black box ?

Take a look at page 1 of this thread me and Toki used the method shown to get rid of a huge watermark placed diagonally across the photo.
