Thread: [\[TUT\] Send a Mail with any Adress you want !](#)

?onsai - December 28, 2013, 10:18 am

Hello HF,

I want to explain how to send an E-Mail with for e.g. noreply@amazon.com

What you need:

- A telnet shell like the Linux Terminal or Windows Telnet
- Fingers to write on Keyboard

First Step:

Find out the MX-Record of the domain of you victim

You can use every tool you want

In this example i lookup the smtp of amazon.. its silly cause nobody have got an mail adress with amazon.com except the workers from Amazon .. so please ignore this tiny fail

Example:

[\[IMG\]http://s1.directupload.net/images/131228/z9vqutyj.jpg\[/IMG\]](#)

Second Step

- Open your telnet Tool
  - Connect to the Server from the MX Record on Port 25 (SMTP Port)
- e.g. Putty:

[\[IMG\]http://s7.directupload.net/images/131228/l9cd63gp.jpg\[/IMG\]](#)

Third Step

Write:

Quote:HELO example.com

The Server shoud answer with something like At your service

Then you have to tell the Server that you want to send an E-Mail

Quote:MAIL FROM:<insertyour@domain.youwanttobe>

[\[IMG\]http://s7.directupload.net/images/131228/vppp9hpg.jpg\[/IMG\]](#)

After you done this you have to tell him , where the email have to go

Quote:RCPT TO:<yourVictimsMail@domain.com>

[\[IMG\]http://s14.directupload.net/images/131228/kvmd3qte.jpg\[/IMG\]](#)

Now you have to create the headers and body of the E-Mail

Write DATA to getting started.

Quote:DATA

[IMG]<http://s7.directupload.net/images/131228/jt3sb35x.jpg>[/IMG]

At least you have to send the mail by writing a single dot in a new line and press enter

Quote:.

Excuse my english ?

Cheers ?

**Hidden™** - December 28, 2013, 10:20 am

Very detailed, I will be using this to my advantage. Thank you!

**bartman36** - December 28, 2013, 10:20 am

Can you check the E-Mails that come in OP? Thanks in advanced! Happy Holidays!

**?onsai** - December 28, 2013, 10:28 am

Thanks in advanced! Happy Holidays!

No you can't check them .. You can only send the Mail.

Thank You ! ?

I personally find it much easier to use [www.emkei.cz](http://www.emkei.cz). It's ten times easier.

It's ten times easier.

You are right but now you know how it works behind the scenes and able to program you own fake spam mailer or whatever ?

**Devil\_carder** - December 28, 2013, 11:51 am

thanks for sharing bro00 good work carry on dude

**Viam Inveniemus** - December 28, 2013, 11:53 am

Thanks for posting this tutorial! Will be using this in tw future!

**?onsai** - December 28, 2013, 1:11 pm

Thanks at all :)

@Hacker Doge: Nice Signature hahaha still laughing

**kepa3D** - December 28, 2013, 1:58 pm

Great guide! Thank you very much, this helped me alot!

**?onsai** - December 29, 2013, 2:30 am

Thank you ! I am very happy about the response :)

**ricklahaye** - December 29, 2013, 4:37 am

All those smpt servers are locked.

And otherwise password secured. (gives me relay access denied)

**locco.** - December 30, 2013, 7:41 am

I like this one...

It's the best way I've seen !

**Ao Haru Ride** - December 30, 2013, 9:33 am

Thank you for this thread

this will help me a lot

thank you

**trojan.** - January 4, 2014, 11:36 pm

Awesome TUT bud, I just wish you could view the emails if someone were to reply.

**?onsai** - January 5, 2014, 5:37 am

Thank you , but i think it is not possible to view a reply .. you have to sniff the SMTP Server but i think its not easy :/

Cheers ?

**Migael** - January 5, 2014, 9:04 am

Nice tutorial, really useful and easy to follow :P

**?onsai** - June 7, 2014, 9:23 am

Update: This Method doesn't work anymore .. the most smtp server block your ip if you try this ..

Cheers ?

**Talu** - June 7, 2014, 1:17 pm

Sad that this doesn't work anymore, but there are easier ways to do this.
