Thread: [Customize File Size to Make Them Larger?](#)

AmazinBlazin - December 30, 2013, 7:40 pm

How can I make .exe files appear to be larger in size? My files are about 200 KB and I want to make it around 6-8 MB. I've heard of ways to do it like using file pumpers or something of that sort. Do you guys have any recommendation to help me with my issue? Thanks in advance.

Worked perfectly! Thanks once again for guiding me.

Managed to modify the size but I also need a 0 detection ratio on VirusTotal. The Detection ratio is 7 / 47 which is unacceptable. :/

So your looking for a crypter. Try Razorcrypt

No, it's for a PPD program but I'm providing virus scans. I need the result to be 0 no matter what or else I'm losing potential leads.

Alexander - December 31, 2013, 8:57 pm

Still sounds like you're looking for a crypter :)

I don't even know what a crypter does lol. I don't hack, want to see my PPD earnings?

Good for you ? A crypter makes the file undetected by antivirus software. Some crypters have additional features.

Oh thanks, I thought crypters are only used for viruses. Can I use them for fake .exes to make it look legit as well?

Yeah, I think so. It depends on which crypter you use.
