Thread: [Creating a youtube subscriber bot](#)

hgmchnono - December 31, 2013, 6:33 pm

I'm looking in to find or create a bot that subs multiple times to 1 account. I do not have much experience with coding like with http request and such. Pretty sure its not likely possible with imacros. Let me know what I should try looking in with. Maybe somewhere out there is a bot created after the Google update.

Happy New Year! Thanks in advance who helps me.

I am no professional on this but if you wanted to make one of those you should learn some HTML and some JAVA, since YouTube runs off Google and Google uses JAVA. Plus they are both web pages so HTML would come in handy there. -Cheers

There are way better choices than Java. HTML has won't help much at all.

OP, if you wanna make your own, start from the very very basics. Don't jump into making before you know how to do it.
