Thread: [iAP Cracker help](#)

Enurv - January 3, 2014, 3:44 am

I am trying to buy coins in instafollowers and instalikes, I have a method to make a great some of money, just when I try to install iAP Cracker it comes up with some "HTTP/1.1 500 Internal Server Error" and therefore not installing.

I've tried to find and use other sort of programs to do this but none work.

Can someone help me? Please.

Thank you.

Try LocalIAPStore instead. Although I do not recommend pirating or cracking apps and most people here will be against this.

I've tried that, and it didn't work. :/

You set the DNS servers and everything like it tells you to?

I've read it all and it didn't say anything about changing the DNS? ?

Sorry nvm, seems like you don't need to if you install via Cydia. You should just be able to go into settings, enable it, and go into the apps and purchase the addons. It may ask for iTunes password, if it does then click cancel and the addon should still unlock. I just tried it on Bike Race and it worked fine.

Enurv - January 3, 2014, 4:14 am

I've tried login out of my app-store account, it still asks for the login credentials for my app-store account but doesn't unlock/grant the coins. err.

lol - January 3, 2014, 4:41 am

You can't cos it's server side. I tried with my LocalIAPStore and it doesn't work.

Well, it does work, just not on all apps. OP which app are you trying to do this with?

Proof it works:

Instalikes and InstaFollow, I know it works somehow because a mate did it and got a shitload of coins, but he hasn't been online for like a month now.

On?x - January 3, 2014, 5:50 am

[AUB°](#) is right, you can't use it for those apps since it's checked server side. Apps like Bike Race just go straight via Apple and so localIAP just replaces apple in the chain.
