Thread: [DDoS .Bat Script](#)

**XeDiaz** - January 4, 2014, 1:05 pm

Hi I was wondering if anyone had a .Bat DDoS script that I can DDoS a site, If so please post a link to it or something.

**6577657534735** - January 4, 2014, 1:08 pm

:START

ping <http://www.website.com>

goto START

This one can hit sites off pretty easily

DDoS can't be done in batch. Read more next time.

Do you really think Microsoft would just give people a FREE, ILLEGAL DDoS tool?

I'm going to quote this and post it on future batch DDoS threads. Thanks for the laugh.

or

Code @echo off

:loop

set /a rnd1=%random%%%10

set /a rnd2=%random%%%10

```
color %rnd1%%rnd2%
echo YOU ARE AN IDIOT
goto loop
```

this is a very interesting code guys ?

anyone who takes down a site with this gets a cookie ?

**SIM-2024365** - January 16, 2014, 11:14 am

As mentioned above you cannot really dos site with batch script, but if you would still like to do it I recommend to get a booter. Those can easily be acquired from marketplace section for around 5-50\$.

This thread was dead. It should remain dead.

**BrothaMike** - January 18, 2014, 11:01 pm

Why you guys bullying him though lmaoo, He's new to this type of shit.  
He probably thought you can DDoS with bat because he saw "DOS" on the section :P

**?CARUs L?VE?™** - January 18, 2014, 11:38 pm

Omni should really consider changing the name of this section

**nickchan** - January 18, 2014, 11:58 pm

DDOS= Disturbite denial of service  
DOS= Denial of service  
people should know that if there on a hacking forum :/

**?CARUs L?VE?™** - January 19, 2014, 1:05 am

But that's the thing. People come to this section, see "Dos" and thing it means denial of service. In this section DOS means DISK OPERATING SYSTEM. People should know that if they're on a hacking forum.

But then again, this is the forum where people get educated and learn.

I'd like to chime in here.

```
ping -t [target]
```

No goto's are necessary when you have a continuous ping built into the executable. Also, just for the sake of a laugh:

```
Code start ping -t %%1  
echo PONG!  
start ping -t %%1  
echo PONG!  
start ping -t %%1  
echo PONG!  
start ping -t %%1  
echo PONG!  
start ping -t %%1  
echo PONG!  
echo Enjoy your distributed (by threading) denial of service attack on yourself, because any host  
can handle pings better than your crappy computer.
```

**annikk.exe** - January 20, 2014, 3:10 am

ping -l 65500 sends a maximum sized ping packet, a whopping 65 kilobytes of ICMP echo request.

For the attack to be even more successful, you could consider repeatedly requesting a particular website. That way it works the target server's hard drive and cpu, as well as its NIC.

For it to truly be considered DDoS attack, though, it needs the first "D" to be fulfilled - it must be distributed. That implies doing it from more than one public IP address. That opens up several cans of worms that are tricky to solve.

I don't ddoss, but this makes sense.

Greetz.

**T7Amaazee** - February 8, 2014, 9:46 am

```
@ehco off  
cls  
echo Enter The Site Name You'd Like To DDoS and Press Enter  
set input=nothing  
set /p input=Site Name:  
  
:BOOTERSEED  
ping %input% -t -l 65500
```

```
ping %input% -t -l 65500
ping %input% -t -l 65500
ping %input% -t -l 65500
ping %input% -t -l 65500
ping %input% -t -l 65500
```

[illegible]

goto BOOTERSEED

Cant remember where I got this code...

Oh my god what a huge useless unnecessarily long shit script

cyberducky - February 8, 2014, 9:47 am

Uh I don't believe there is a DDoS.bat script. You can ping IPs in cmd but that doesn't do anything lol

?CARUs L?VE?™ - February 8, 2014, 9:52 am

You're right. Anyone who thinks you can DoS or DDoS in batch is an idiot.
