Thread: [Firewall IP Blocking Question Help](#)

Brigz - January 4, 2014, 6:18 pm

Is there any program that would allow me to alter my network so a specific IP range or address could connect to me but I would be blocked to connect to it.

I know there is software that would allow me to connect to them but block them from connecting but I want the opposite is that possible.

Please reply thanks

If you use Comodo you can create rules that will only allow incoming connections?

Configure your Windows Firewall by adding these rules.

you can also edit the host file

so for example 127.0.0.1 google.com

will block you from connecting to google

google can still connect to you though but will not maintain a connection because your computer will basically say fuck off (in computer terms that is)
