Thread: [Protect yourself from getting resolved ? \[Skype\]](#)

Supervisor - January 4, 2014, 11:19 pm

Hello everyone,

Is there anyway to protect yourself from getting resolved on skype ?

If I use a VPN, will any free VPN work?

Please leave your tips bellow thank you.

Herbo - January 4, 2014, 11:20 pm

There was a tutorial I seen, I will go find it.

I have searched for tutorials, but the one I have found are all old and outdated.

Herbo - January 4, 2014, 11:22 pm

Here is a thread, have you tried this one:

You can use a VPN to be honest. Skype Resolvers already have a hard time resolving the real IP address (without any VPNs or proxies) due to Skype new security features, staying behind a VPN or Skype's in-built proxy feature will just make things harder.

Skype built in proxy feature, doesn't do any effect.

I am using a VPN and I am still able to resolve my IP.

This doesn't work at all. I have this set for few months already.

-zERAI - January 5, 2014, 8:02 am

The best thing u should do is working with skype while in a VPN connection.

I doubt that you are able to resolve your own IP to be honest. Can you explain how you manage to do it ?

Unorthodox1337 - January 5, 2014, 5:29 pm

Most Skype resolvers are not resolving IP's very well at the minute anyways. I've tried various different ones, paid and non paid, and to be honest there not showing very good results right now.

Weebex - January 5, 2014, 6:46 pm

Didn't skype not use their api anymore, I saw this on a thread before

People can still resolve me man and it is getting annoying...

Trying to find a permanent solution for this.

We are telling you that more then half of the Skype resolvers are not even working and that if they work, they'll resolve the VPN IP and not yours ...

Supervisor - January 5, 2014, 7:31 pm

I am behind Proxy and VPN... I don't get it.

You're resolving your VPN address, not your real IP address ... Damn. Lookup your IP address without VPN then look it up when using a VPN. They will be different. Also, maybe you're resolving it because you're launching the resolve from the targetted IP.

Supervisor - January 5, 2014, 7:41 pm

I know my real IP ?

"Also, maybe you're resolving it because you're launching the resolve from the targetted IP."
What you mean by that?

Emoticon - January 5, 2014, 7:41 pm

There is no solution to this. I know it's not what you want to hear, but trust me it's not what I like to say either. There will always be Skype resolvers until they make a huge fix. For now just keep yourself on a VPN or use some other proxy solution. No clue whether or not Microsoft will care enough to fix this.

ASLR - January 5, 2014, 7:45 pm

Yes you should be just fine using a VPN. Might try being a bit more careful who you add on skype if people are resolving you also.

Spoiler ([Click to View](#))

I just had to say this...

"If all else fails, use a condom."

Supervisor - January 5, 2014, 7:49 pm

Only the people in my contact list can resolve me ?

Also does it take time for the IPs to update on my acc? Like if I was without a VPN then next min i go on a VPN...

God? - January 6, 2014, 2:44 am

Tools > Options > Advanced > Connection

Then you make sure "Allow direct connections to your contacts only." is checked off. After doing this it will take a few minutes to sync, and then afterwards you'll be completely fine.

Anyone who attempts to resolve that Skype user will now get a default "Microsoft Corp" IP that appears somewhere in Wichita I believe, with no other information attached to it. Remember, do this on all your Skypes if you have multiple accounts. There's been many times that I couldn't resolve one persons account, so I went to search for another and successfully resolved it from his alt.

Like people were saying above, it isn't very accurate anymore a lot of the time, but it's still good to make sure you're not resolvable. Just in case.

Didn't they resolved your IP before? Cause if your on a VPN and Proxy, there is no way that they can track your real IP.

What you mean by that?

You might be using a website that has your real IP stored. Just get a new IP and then turn the VPN/Proxy. ?

nalgar - January 9, 2014, 6:27 pm

i think that Hotshield is a good VPN for hide from ID resolver

GameSeller - January 10, 2014, 4:32 am

I tried this some months ago.Worked for me .

Is there a way to add a list of Proxies, so that I do not need to merge 50 times a day...
