Thread: [\[HELP\]Cracking an online game bot.](#)

N1nj4Styl3 - January 5, 2014, 11:42 am

Hello there,

Nice to meet you guys, I'm some kind of 'new' here.. Actually I've been watching more than posting.

A/w, I came here 2day to ask you if it's possible someone of you guys crack a bot program for an online game. The bot is called: kBot and it's for DarkOrbit (online - game).

When you open it there are 2 textboxes 1 for username and 1 for password. The username&password = dark orbit. (you're logging in game like that, through the bot).. When you enter a username&password of your account it will verify the license version, updates, check if the subscription was paid or not.

What I'm asking is, if you could, skip the updates/license verification/and if the subscription was paid. So, if I press username&password I'll just login.

I don't know if it's possible, if there are high chances or low.. but guys I'll be very appreciated if you do this favor for me. It's just I don't like paying money to games/related because I'm not that rich. I.e I'd rather keep these 10 euro for the bills than giving them for a bot for just 1 month. I'm a college student and you know the expenses are lots..

A/w, didn't want to write too many things in a topic.. so here's the download link:

DL: [2shared/kBot Download Link](#)

Virus Total: [Virus Total / kBot](#)

Thanks guys, I'll be really thankful.. thanks.

Servers are down or something? I can't tell if I cracked it or not... Anyways, pm me when they are up or something.

N1nj4Styl3 - January 6, 2014, 10:44 am

The servers of the kbot yeah are down.. I doubt if they ever come back to revive their project.

So, if there's any way to by pass the online validation would be cool.

Thanks for sharing your time. :)

N1nj4Styl3 - January 6, 2014, 12:27 pm

I've left a post there. :)

Thanks for the help though.

AnonymousDDOxz - January 7, 2014, 8:08 am

Working on it right now.

Will be posting updates as soon as I accomplish it.

N1nj4Styl3 - January 7, 2014, 9:01 am

Thanks meng! I'm really glad for this.

I'll be really appreciated if you accomplish this. :)

Thanks!

Bump.. :)

Seems no one could or/is interested to help.. help guys, please.

N1nj4Styl3 - January 10, 2014, 12:02 pm

up up....please help..

Thanks...

N1nj4Styl3 - January 12, 2014, 10:03 am

Help.. please.. I really need it. :/

Thanks in advance guys..

Help.. please.. I really need it. :/

Thanks in advance guys..

N1nj4Styl3 - January 16, 2014, 5:02 am

up..up..up..

Someone, please?

It's coded in Java.

pixalen - January 16, 2014, 5:08 am

Please stop pushing your own thread :<

You could maybe try using Fiddler to bypass the validations, I'm sure you could google a little bit to find a tutorial!

Good luck.

Hello,

Unfortunately I mostly watched .net tutorials and not for Java ones.

If someone could bypass it, it would be wonderful.

Thanks in advance, and sorry for the long pss.

Hello, anyone? :/

I'd really appreciate it.

Thanks.
