Thread: [\[TUTORIAL\]How to get specific types of slaves \[GAME ACCOUNTS, GIRLS ETC.\]Spreading](#)

TarAldar1on - January 6, 2014, 2:21 am

How i spread

There are many on this site asking for help with spreading, while my methods for sure aren't breaking news, i thought i would share them anyway :)

It's important to note that i for the most part only look certain kinds of slaves, (gamers) so this guide is for those that have specific types of slaves they would like to get.

If you want quantity use a torrent

Getting the first few slaves are always the hardest part but once you got those things will get easier.

First step is to Register at a few accounts on different forums where you will find your type of slaves.

Are you interested in FB/twitter/insta etc accounts any method will work really since most people has that anyways.

Getting game accounts

Are you targeting gamers make an account on forums that is about the games you are interested in (I would recomend to stay of offical forums)and know something about. (i can get access to dozens of LOL accounts but i don't know anything about that game)

I myself is a huge Lotro fan and Post my links on forums about that game.

Like for example «there is a new update on the lotro bot out now you can download that here **» when they download this they will acctually get a very good working bot but of course it comes with a little extra ;).

I then usually check out their friends on FB, skype steam etc. To see if anyone else play that game or have any other tempting accounts, and spread my link trough my first victim.

Getting Girls

Hot girls aren't as stupid as people think they are. Atleast they are very catious on the web. Alot more SE in requierd, wich if i might say so is one of my strenghts.

Again we would need to start on a few forums. Typically you would have to spread on forums about Fitness and Health, Fashion, maybe even some fansites.

As soon as i get a couple of slaves i ditch the forums and move on to spreading trough their Facebook, skype instagram etc.

As mentioned girls are catious, so getting a link/picture from someone they trust, is usually the best way to go.

Don't just spread you link to all the friends. (You might get some this way ofc).

Instead start an conversation with them and then send them your link when it seems fit. Browse trough here inbox just to check out how she normally talks to her friends, this way you will have an idea on how to talk to your victims.

You can also spread trough blogs. Doing that i have actually managed to get 15 of the top 40 pink bloggers in Norway :) (i dont want to say who but here is the list so blogg.no)

Rating people that speaks the same language is obviously the easiest.

I Feel the need to point out that i rat to get accounts and not to spy on girls, but obviously im a man who do get tempted :) (evryone who says they haven't tried are lying :))

Please be a gentleman don't spread any cam recordings/pictures or whatever on the internet keep it to yourself.

Im sure you get the idea now. If there are any other targets you want im sure this method will help aswell.

Few tips at the end here:

Bind your server to an actual picture, program etc.

Spoof it.

Crypt the server.

Get a JDB

Get a VPN!!!

I just purchased plexJDB you can find that here (<https://hackforums.net/showthread.php?tid=3757335>) and i imagine that spreading will get even easier now.

Im sure i have forgotten something (wrote this at 7 am)so there will probably be a few edits troughout the day.

?Gohan - January 6, 2014, 3:22 am

nice tut, should help most people who have spreading questions.

overdead - January 6, 2014, 3:46 am

Very in-depth and detailed tutorial, thanks a lot for the share man!

TarAldar1on - January 6, 2014, 4:23 am

Thanks for the reply guys. will be adding more later today

G^NNicus - January 6, 2014, 4:27 am

Thanks for the tutorial, good one !!

bmseller - January 6, 2014, 6:08 am

thanks alot excellent! keep up the good work!

CyBEr_JeDi - January 6, 2014, 6:18 pm

Nice tut reading salves inbox is a great way to learn how they talk, i will have to remember that.

Bo Burnham. - January 7, 2014, 10:07 am

Basic and nothing new, still a good way to get new members the information they need.

Good job

Saduto - January 7, 2014, 11:33 am

Do you have to have a VPN or can I use a DNS Instead?

thePolarBear - January 8, 2014, 1:37 pm

Good tut. I also use the game method. I guess girls like games sims and girly games. You could get a chick to click on a download link (I dont really know if JDB work anymore) or u could get them to

download a infected file

jamester000 - *January 8, 2014, 1:54 pm*

nice post, how do you personally go about binding your stub or server to a picture? like what program/encryptor etc and stuff

TarAldar1on - *January 9, 2014, 9:38 am*

I use ByteCrypter wich has all features you would want in a crypter. i also have RazorCrypt basic edition.

What i bind to depends on what im targeting.

If it's a mmo account i bind it too a bot called Pwnagebot.

Sometimes i use a picture.

I have recently started with JDB, but i've had problems with my webhosts suspending my accounts, so i need to find an offshore webhost i think.

hacko7 - *January 9, 2014, 11:19 am*

Thanks for the tutorial, good one !!
