Let's talk about the crypter now

Each time i run the crypter , i see a new message (@Byte: I love your funny message ^^), proof they are daily working on it to offer us one of the most HQ crypter ever released (maybe even the best one) with always FUD status or maybe 1 detections depending on the enabled options , the crypter supports all malwares i have : NetWire , Blackshades , Blackshades recovery , plasma RAT and andromeda , i will never regret purchased it , and i will for sure extend my licence !!!

I am still searching a bad point in that crypter but it is really hard to find the worst thing is i am not the only one to have it ^^:P

Scoring Rubric :

Support : 10

Updates : 10

FUD : 10

Options : 10

Compatibility : 10

Comments :

Support :

- The support is the best support I have seen on HackForums.

Response time has to be one of the fastest, from both members of their team. Not afraid to TV, and full pm's via Skype. Within the first day of the Crypter, byte[] was dedicated to help me get my "setup" running efficiently.

I am very happy with the support I have received and I truly think everyone on HackForums can learn from byte[] and Scarface.

Updates :

- byte[] and Scarface release updates frequently. For any reason, and I am very pleased to say that Updates are automatic on launch. "Unlike many other crypters "News" section. This makes me know that I have the latest version with the latest updates. :)

FUD :

- This has to be one, if not the longest running FUD time I have seen, and when ever it gets detected, Even 1/30, byte[] and Scarface release an update that night.

Options :

- The GUI is Fluid, Complete, and Full! We are left with any options you could ever want.

Compatibility :

.net and no dependency. Nuff said.

I am very pleased with this crypter and I recommend it to anyone who is looking for an Easy to use, Fluid, FUD, crypter with great support!

Wouldn't you agree a language like C would be more failsafe?

(Jan 6, 2014 11:32 PM)s0lar Wrote: [\[CITE\]](#) Wouldn't you agree a language like C would be more failsafe?

Well it all depends.

If that C/C++ crypter had a 500kb output from a 650kb bin then yes, it would. If it had lets say a 800kb or even a 1MB then no, the .net would be better. Why you ask? Botnet loaders have a higher execution rate the smaller the file is. Now of course if you were specifically targeting 1 person the C crypter would always outperform it. All depends on the needs of the user.

Oh I see, so the smaller the file the most probable the Antivirus doesn't detect it?

Oh no no no. The antivirus not detecting it is the amount of people that own it and the amount of work put into it. I am on the computer a lot and we are selling a limit of 25 copies. The size has to do with the execution rate when you are buying bots.

I have to say that I am one very happy customer! 11/10

It works with PlasmaRAT

It's completely FUD. :-)

Intuitive with a beautiful UI. Navigating through the crypter feels like butter.

Also, I received the product shortly after I ordered it and byte[] was very quick to answer any questions that I had. Super friendly guy!

Do not hesitate to purchase. ?

Maybe one day we will have multiple stubs and be able to accept a larger amount of purchases that would equal up to 400 btc so we could cash that out.

I was talking about the 25 copies your selling now. More buyers- crypter turns to shit. Simple as that, I've wasted money on many crypters and all are garbage. Might as well just learn how to do it myself instead of wasting 100s on useless code.

Thanks anyway.

well, it's not necessarily true. Our customers know that the crypter is HQ, and there is a limited amount of copies, so they are more careful on how they use it. We already had one virus total which went 11/35 but the usg was so damn strong on this thing another crypt took it right back to 0/35.

Thanks, SkilhgtThat is the amazing part, we never had to refud it. It was just one crypt that went bad. As for the lifetime of the product, I have 3 more years of high school (that is already too much information for you), and I plan to stay on this computer for as long as I can. I should say the lfietime will outlast the 1 year.

It is honestly all up to you, but by paying the 10 extra dollars, you have that re-assurance that you practically own this crypter forever.

No not implying that the lifetime license will last forever, but it should last a song ass time.

If I remember correctly plasma crypted is a little over 250kb...? Not certain, but I know no higher then 290.

killer34000 - January 13, 2014, 10:59 pm

it's 240 kb the server alone, i'm currently using that, i dont even use data scrambler because the miner and botkiller is laggy with it :/

Think of it like this

Darkcomet 650kb unencrypted

Darkcomet 504kb crypted

Magik.

killer34000 - January 13, 2014, 11:12 pm

wow looks great, does the botkiller, miner work as good as an unencrypted server ? and do you accept crypto currency to pay your crypter?

Plasma runs in memory too, so it's kind of creatiNg a new process within my process...?

So all the process protection persistence and mining is still working. No I do not accept crypto currencies.

Honestly guys this is probably the best crypter out on the market. While I was talking with byte[] the crypter became detected and you know that he did? He instantly started to reFUD it. He is nice and takes time with his customers and people who just want to know about the crypter. So what make it the best? Well for one he tries to reFUD as soon as he can,has the most antis i have ever seen on a crypter, and byte[] is just plain awesome. This crypter is a must have for anyone. It supports both native and .net stubs which I really like. Big thumbs up for Data Encrypter and byte[].

Amazing support from HQ members.
They're extremely helpful and takes the meaning of "Customer Support" to a new level.
Vouch for the owners, and the creation they have made.

Have to vouche again ... this guy gives the best support I ever had on any product.. also its always FUD and he even helpd me with stuff that had kinda nothing to do with the crypter.. byte[] is the best! Hope all 50 slots get filled (but with no distributing tards :P)

Crashed - January 29, 2014, 8:27 am

Let me start off saying, I have to give a HUGE vouch for these guys. The owners of this Crypter (Byte & Scarface) give the best support than any other seller on the market. They always listen to what I have to say, and fix whatever I have a problem with.

This Crypter is amazing, with the new update its hitting 0/60 no problem, I tried binding, spoofing, icon changing,anti's and no matter what I do, it still sits at 0/60! Just amazing.

<http://razorscanner.com/result.php?id=179429>

Buy it while you can guys, this kind of quality item/support won't last forever or be found elsewhere.

Best crypter on the markey so far , only vouches and great feedbacks !
Good luck with your sales guys

Horde - January 30, 2014, 8:51 pm

Looking good babes. Hoping to purchase later this week :)

DarK-D3v!L - January 31, 2014, 10:51 am

This crypter is purely amazing , the support team is efficient and fast as fuck , i have a little issue to properly crypts my 2 RATS (netwire and blackshades) , scarface fix that in 2 minutes over skype with a lot of details , explanations and informations , he knows his job for sure and having a REALLY helpfull support is really appreciated , i think a lot of sellers could learn from this team

Let's talk about the crypter now

Each time i run the crypter , i see a new message (@Byte: I love your funny message ^^), proof they are daily working on it to offer us one of the most HQ crypter ever released (maybe even the best one) with always FUD status or maybe 1 detections depending on the enabled options , the crypter supports all malwares i have : NetWire , Blackshades , Blackshades recovery , plasma RAT and andromeda , i will never regret purchased it , and i will for sure extend my licence !!!

I am still searching a bad point in that crypter but it is really hard to find the worst thing is i am not the only one to have it ^^:P

Good luck with sales guys and Best Regards

Will be done in future. We have problems cashing out BTC at the moment.

(Jan 31, 2014 11:51 AM)DarK-D3v!L Wrote: [\[CITE\]](#) This crypter is purely amazing , the support team is efficient and fast as fuck , i have a little issue to properly crypts my 2 RATS (netwire and blackshades) , scarface fix that in 2 minutes over skype with a lot of details , explanations and informations , he knows his job for sure and having a REALLY helpfull support is really appreciated , i think a lot of sellers could learn from this team

Let's talk about the crypter now

Each time i run the crypter , i see a new message (@Byte: I love your funny message ^^), proof they are daily working on it to offer us one of the most HQ crypter ever released (maybe even the best one) with always FUD status or maybe 1 detections depending on the enabled options , the crypter supports all malwares i have : NetWire , Blackshades , Blackshades recovery , plasma RAT and andromeda , i will never regret purchased it , and i will for sure extend my licence !!!

I am still searching a bad point in that crypter but it is really hard to find the worst thing is i am not the only one to have it ^^:P

Good luck with sales guys and Best Regards
Thanks for this great feedback dude, means a lot :D

sure it is , and i always think when people are PROFESSIONAL as you are , that must be claimed !

A lot of support team are pure shame , of course i know people don't spend 100% of their time online and have a life but you do a great job and the community must be aware of that ;)

i will now run the crypter P
Best regards

Hello,

I have a question regarding your crypter.

I have an internet cafe with several computers in my country and i want to install a RAT version on my server in order to see if my employees add all existing customers into personal database, because some customers informed me that some of my workers did not add all people that were paying to the list.

I have Avast antivirus installed and wish to use any of the following RAT's: Darkcomet, CyberGate or Plasma RAT / Cerberus.

Please inform me which version of these RAT's are the more stable, and if you program works well with my matter.

Sc?rf?c3_ - February 1, 2014, 4:39 am

All RATs enlisted are supported. Fell free to PM one of us for assistance to take control over your net.

Hello Everyone!

Before I start my review, I would like everyone to know that I have tried many Crypters. Paid Monthly, Paid Lifetime, and Free.
And this crypter is the BEST.

Scoring Rubric :

Support : 10
Updates : 10
FUD : 10
Options : 10
Compatibility : 10

Comments :

Support :

- The support is the best support I have seen on HackForums.

Response time has to be one of the fastest, from both members of their team. Not afraid to TV, and full pm's via Skype. Within the first day of the Crypter, byte[] was dedicated to help me get my "setup" running efficiently.

I am very happy with the support I have received and I truly think everyone on HackForums can learn from byte[] and Scarface.

Updates :

- byte[] and Scarface release updates frequently. For any reason, and I am very pleased to say that Updates are automatic on launch. "Unlike many other crypters "News" section. This makes me know that I have the latest version with the latest updates. :)

FUD :

- This has to be one, if not the longest running FUD time I have seen, and when ever it gets detected, Even 1/30, byte[] and Scarface release an update that night.

Options :

- The GUI is Fluid, Complete, and Full! We are left with any options you could ever want.

Compatibility :

.net and no dependency. Nuff said.

I am very pleased with this crypter and I reccomend it to anyone who is looking for an Easy to use, Fluid, FUD, crypter with great support!

thanks for that amazing review man!

On a side note... I don't think I've been FUD for this long. Seriously just sitting on my ass. Maybe I should code a new revolutionary jiggawatt compressor that mines dogecoins at a 100x faster hashrate then your cpu fans would.

I was wondering how to get in contact with you! :p

cjack - February 7, 2014, 10:46 pm

I want to send a VERY BIG "THANK YOU" to Byte[]. Your support it's the BEST I've ever seen, always kind and ready to help! And a good support it's so important for final users!!

Your crypter it's really the best one around here, always FUD and stable, really a dream after trying other "crappy" products around here.

I want to wish you good luck for your business, you deserve it ;-) (sorry for my bad english!)

Thank you for the update! I recommend this crypter to anyone!!!!

renegade82 - February 12, 2014, 3:45 pm

vouch for byte[] and his crypter, support is fucking awesome!! and he really is a very nice and helpful person.

crypter is working like a charm with DarkComet 5.3.1, purchase and acquiring license of the crypter was quite fast and byte[] guided me through to the whole process to make my DC server work and FUD. I love this guy :D

anytime again, cheers mate ;)

Dreamfuul - February 12, 2014, 4:20 pm

This both guys doing a great job, i was searching for a Crypter that FULLY supports my Plasma RAT, most of the Crypter are not really good and have really not that good Support.

First of all the Crypter is Awesome, when its Detected in couple hours there is a Update, they have much effort in they project.

When u have a problem or questions about settings they help you very friendly. beside of that they smalltalk with and talk with you about random stuff :D

This both guys loving all his Customers and help in any situation.

BIG VOUCHE

Support Good!

Crypter Good!
Always FUD!
Good and Working functions!
Sexy GUI!
SEXY GUYS!

From a happy customer, Dreamfuul

I recommand this perfect crypter.

I use unicode OS. Therefore byte[] updated crypter for support unicode because of me.

He is so kind and crypter is perfect.

still 0/60 FUD and I love crypter's nice view UI.

Easy to use, easy to crypt!

Thank you byte[] and I will love you forever :)

Another reason why u should buy this Crypter.

Plasma Rat had a Update from 1.4.2 to 1.5.0 but after crypting with couple .NET Crypters their getting a Error on Execution. But this was only a fault from KFC Watermelon and he needed it to fix that problem, no any issues on the Data Encrypter side.

i told Sc?rf?c3_ over that problem and he just coded a new stub in 2 minutes with a Hotfix for Plasma RAT 1.5.0 to fix that bug.

THIS GUYS! ?

The Support is totally awesome!

If i see him on the street i give him a Blowjob for free :D

GLWS!

Funny story actually. I didn't know what to put in the poll but I really wanted to make one. Spreaders was the only option I was serious about. I might do it.

Well, there is no physical stub as it uses codedom, but if you compile it with code only (not really crypting, just the code) it's around 10kb?

If the case will be updated as soon as Byte[] get online (3/4 PM US Timezone) since he can edit the thread, but we had expirations yesterday.

More to come:

Sells are usually suspended when limit is reached, untill new expirations...as you can see here.

For the renaming yes

The file pumper should work too, I was gonna add a file pump feature but.. idk, just didn't. It worked fine though.

Vouch for byte[] and Sc?rf?c3_! I had a problem with the crypter and it was recoded and fixed ON THE SAME DAY! They have the best support by far. Would recommend this to anyone looking for a fud crypter.

BloodZeed - March 23, 2014, 4:30 am

pm me payment info will buy thanks ..

BlueMantis - March 25, 2014, 7:22 am

This looks amazing, I really wish could buy this with Bitcoins ;(

And if I had the money haha.

Good luck with sales though!

abadguy87 - March 25, 2014, 10:23 am

Please consider accepting bitcoin in the future, looks like an excellent crypter, good luck with your sales.

Guess who need to extend his licence right now ? :P

I miss to see that i am a little shit when i open the crypter ! ;)

Excellent crypter probbly the fucking best i ever use , that is why i come to extend my licence ^^
don't hesitate to buy data encrypter , fully working with the majority of malwares sold here , always
FUD , absolutely always , tons of features , fast , professionnall and efficient support (really rare to
have a decent support , this one is just perfect !)

best regards

Haven't found a silent miner yet that doesn't work with it, haha :D

bytecoder - May 23, 2014, 5:32 am

does it have no autobuy? i bought it and got no email.

anarchy2009 - May 23, 2014, 9:14 am

hi, i test my crypted server on fuckingscan.me, result detection 8/30 and 10/30 with an other crypt file, normal?

on your crypter it's write last refud : 4/15/14

bytecoder - May 23, 2014, 9:56 am

i hope its better be 0/30 if i got access to the crypter.

You need to send a PM after purchase.

PM Byte[] since he checks received payments on autobuy.

Use always PM before to use the Sales Thread for you personal issues.

DataEncrypter never been even nearly that result. If you get variant.barys or .kazy try a better icon or assembly or use the default ones wich are guaranteed to be good.

Saame to you, try always PM first.

byte[] - May 24, 2014, 9:01 am

Guys, please, I am on vacation, Scarface, for now, activate bytecoders account. Wonder why his name is byte coder.... Also, when you buy it with autobuy it redirect you to PM me. You must have not have enough posts (which you don't).

I am interesting to buy it, but none answer me on PM, I want to buy it, but using Perfect Money, can we talk on PM?

Thanks!

I vouch for this. Excellent product and both coders have been really helpful on skype. Thanks again.

Crypter is now fud again. It was for sure not 8/35, but 2/35...

Enjoy! I'll post a scan in a min.

sorry but after 3 days the stub is not yet fud 8/30 on fuckingscan.me

<http://fuckingscan.me/result.php?id=97951>

i can't contact you every day to check if the stub is 100% fud...i feel you don't check the detection every day...

You have the same problem with icon detection...

Sc?rf?c3_ - June 10, 2014, 10:18 am

Virus: Gen:Variant.Barys.24277 (Engine A) this is all about icon/assembly wich you can manage yourself if default ones get flagged (they are used by many....moltipled for countless files)

@Trojan.MSILVInjector.DYN this is the only serious detection occured, will be fixed tonight.

Byte[] is actually travelling over the europe to reach a certain destination, that's why he dont reply to you.

Is the second time you gone straight to the selling thread for personal issues, we offer a good support also over Skype, you can also pm me if you dont get replies.
Third time youll' face some punishment.

edit: just changing assembly/icon
<http://razorscanner.com/result.php?id=441622>

anarchy2009 - June 10, 2014, 11:18 am

yes, i understand to not post on this thread for support, I just wanted to inform others members about the stub fud...it's my last post, in 2 days my licence expired and I do not extend.

Other guys know how to scan a file.... and know also that it was 1 detection, if you aren't confident with this stuff and you dont even know how to get rid of that "gen.variant" like i've done... well you are the last one wich should give suggestions to others.

You also attempted again a sell trashing....i'll consider this your third chance, since meanwhile you still not pmed me or asked for a skype contact...so your bad intentions are quite clear.

Whoever had any kind of problems have never been disappointed, having extra days or the issue solved as soon as has been reported,
you dont even are in touch with us.

License closed for breaking TOS. Maybe another seller will please you better ?

@anarchy2009: better you'll be patient next time

I've made an update removing ESET and fixing generics wich may occur with default default stuff.
Enjoy!

The Magnificent One - July 3, 2014, 6:12 pm

Does this crypter have a filebinder and iconchanger? Also can you provide me with some proof that this works with cybergate? i'm only asking for proof because the filegaurdian people told me their crypter worked with cybergate and it didn't and I wasted my money.

Thanks.

Yep....another user got it working just today, btw, never had problems with Cybergate....PM me and we will look at it together. Thanks for your interest.

Obviously it has Binder / Iconchanger / Random Pixels Icon Generator + Icon size selection.

Cpt.Conficker - July 14, 2014, 4:59 am

Hey I am looking to buy but tired of all the hype on some of these.

My problem: Avast Deep scan is actually pretty solid at catching and making sure the program is clean before letting it run and even with Kazy re-fudging same day and using recommended settings deep scan catches it on imminent server.

Can this bypass this for sure?

No problems installing through deep scan, if you need we can do a test.

If you crypt a RAT using this will it bypass either/both Norton/ESET run-time with everything enabled on the AV's?

Is this project still continuing? Just wondering.

Kill?Muvz - November 24, 2014, 6:23 pm

I'm sure it will be continuing. Every Crypter needs a recode every now and then :)

Alright, guys, let me explain.

I had to quit the crypter since my paypal got limited and I can't be bothered with a holder, therefore I just gave it to scarface to manage. Now, since scarface is completely managing it, he wants to change up some things, as we have different styles of coding. Now his progress on that, I have no idea, but that is what is currently going on.
