Thread: [> Test your servers here - Anubis-like site that doesn't distribute! <](#)

3nterman234 - January 8, 2014, 6:32 pm

Alright, to start off, this is basically a second version of the original, in which it sends you a fake slave. This one is basically like [Anubis](#), in which it uploads and executes your RAT.

[Original Here](#)

Here's a quick explanation.

1. [Go here](#):

Code <http://3nterman234.us.to:25567/testdarkcometupload.html>

2. Click 'Choose File', and navigate to your RAT executable

3. Click 'Submit', and wait. If you get an error that the service is already in use, you must wait your turn.

If you get a slave as you would with Anubis, you're RAT works. Elsewise, you're going to need to change some stuff.

As always, I'm available on skype @

Live:EnterX_3

*I'd like to add to not abuse it or try and Pen-test it, as it will only clog up the servers with requests.

?asp3r - January 8, 2014, 6:55 pm

pretty chill dude, grats on finally releasing this. I'm glad to see you've got somewhat of finalized product ?

Thanks ?

I'd also like to add that it's completely normal that your slave will disappear after 10 or so seconds;

it's an automatic reset feature that will prevent permanent damage. Don't try to bypass this, as it's a complete wipe of the drive.

?Sharkisha - January 8, 2014, 9:04 pm

HQ user, his services are amazing, great to deal with, no doubt about it.
Vouch for this.

3nterman234 - January 9, 2014, 1:17 pm

There must be something more you guys are looking for other than more servers, like faster environments? Or maybe auto-analyzing binaries to see which IP they go to, so you don't have to risk your system?

Please ask away ?

Edit: Probably going to add a status field on the site so you know when it's available or not

ihatemylife - January 9, 2014, 5:14 pm

I use this ,Works well.I Vouch for this

3nterman234 - January 9, 2014, 6:53 pm

...and I believe we were just hit with our first DDoS ?

Apologies for future downtime.

Edit: Seems to have stopped pretty quickly

?asp3r - January 10, 2014, 2:30 pm

Just used it today, works perfectly. It executes the file perfectly and DC shows the connection.
Thanks for creating this

Probably was DDoSed again, I think I was down at about that time.

I restarted the web server, so hopefully things will work now.

Yup its back up, and i got another .exe through! thanks for making this, now i can keep my files fud and make sure they work

3nterman234 - January 10, 2014, 6:19 pm

I'm probably going to switch the virtual machine from Windows XP to Windows 7, so there's more compatibility for your servers. May take a little, and afterwards, I'd recommend checking your server

again ?

Thanks for all of the good feedback ?

I'm also probably going to add a screenshot feature, so you can see what error messages appear whenever your server is uploaded.

Zenology - January 13, 2014, 3:26 pm

Looks good man, thanks alot!

Definitely gonna come in handy :)

TheMummeboy - January 14, 2014, 5:26 am

Thanks for this, with anubis being down I had no way to test my RAT. This is a great site!

3nterman234 - January 19, 2014, 1:09 pm

Some news, I'll be updating the server from windows xp to windows 7, so we may have some downtime.

It will also have .NET installed, aswell as java, so there's more compatibility. I'll give an update when everything is back up and running.

ThrobinHood - January 19, 2014, 2:11 pm

Hope it comes back soon looking for a good place to test a RAT port forwarding on my router is terrible !

It'll be back shortly, I believe I'm right about done converting everything to windows 7. It should be much faster now too :)

Everything should be back online!

Changes:

Upgraded to Windows 7

Added .Net Framework 4.0 Optimized file transfer

20% faster than what it was before

* More compatibility

Please tell me if you have any trouble, as this is the first release of Windows 7.

For some reason I can't even connect to the page, getting the "Oops! Google chrome could not connect" Error. Is anyone else getting this or just me?

It hadn't been used in awhile so I decided it wasn't worth keeping hosting on;

It's back up for anyone to use now.

I plan on re-designing a bit, because it's for every RAT, not just DarkComet. It takes every executable ?

Thanks for the feedback. I'll try and work on another server because that seems to be what everyone wants.

From everywhere that I've heard, yes. Look around, I think everyone would agree.

d3d0h - January 27, 2014, 5:43 am

Yay down again =[tried your new link ...

Coo - January 27, 2014, 3:26 pm

Awesome site, use it all the time!

Love it man, keep up your awesome coding work :D

KingVS - January 27, 2014, 3:30 pm

Neat thread, will try this now but thanks in advance for the release.

It's down yet again =/ It's my favorite site to test, it actually worked for me :)

Noshy - January 28, 2014, 9:07 am

Omg can you stop ddosing his site already?

3nterman234 - January 28, 2014, 1:46 pm

Sorry guys I'm working on paying for my next month of hosting but my paypal is being stubborn, I'll report back when thing's are going smoothly again.

Your local machine doesnt test if port forward works or not, otherwise everyone wouldn't need "Test slaves"
