Thread: [\[TUT\]How to correctly use a Crypter to make your rat\[FUD\]\[TUT\]](#)

?Unbelievable Rager™ - January 9, 2014, 11:11 pm

In this tutorial i will teach you how to Crypt your rat the correct way and making it FUD

Requirements: *Any RAT

*Any (Preferably Paid) Crypter

*Any No Distribute File Scanner Such as [Razor Scanner](#)

Open your rat program (Im using DarkComet 5.3) and head to the tab where you build your rat/stub
After you built your rat/stub Go ahead and open your Crypter in this case im using [FileGuardian](#) as my crypter

(Remember Less features enabled = Less Detection after Crypt)Once you have added in all the features you want go to your crypt tab and crypt your Rat

After you crypted your rat Head over to [RazorScanner.com](#) and register, when you register for a free account you get 1 Free Program scan use it to scan your newly crypted Rat and it should look something like this after the scan depending on your Crypter.

Thanks for following this TUT and if you found this helpful in any way please leave a comment down below to keep this post alive!?

Nice contribution to the forum good work man ;)

Moon Rock - January 10, 2014, 1:47 pm

I think the title should be how to use a crypter to make your rat FUD, but it looks good and simple.
Thanks

This has helped me a lot and I also bought FileGuardian while I was at it. This tutorial is great!

kkimo - January 11, 2014, 3:20 pm

Bro , its just you need to fud crypter to make your rat Fud ..

im sorry bro , what's is the New of that :(

Pi_Rat - January 11, 2014, 3:41 pm

nice tut my friend .. good work keep it up
