Thread: [Anyone have the custom gyazo package?](#)

????? - January 12, 2014, 2:25 pm

I'm considering starting a gyazo-thing for myself, but i cant find the package with the php files and the shit i need.

Does anyone here have it and mind sharing it with me?

I honestly wouldn't bother using it if you are just going to use a publicly available script. Good luck to you if you are serious about this, but the amount of effort being shown dictates that this project won't be around six months from now.

I didnt say that i'm going to have it for the public.

I just want it for my self so I can save all my images to a webserver.

Please stick to what I asked for.

But never mind, I found them... :)

Closing.
