Does someone know of this ip have an anti-DDoS? 46.105.108.9
And how many Gb I need? which layer etc UDP?
I am using reBOOT but it doesn't work if I try to shut down them.

It's an OVH france server.

I believe they have decent DDoS mitigation but you should be able to take it down if you have enough power.

Decent? It's beyond decent. Someone posted a thread in the marketplace asking to see who could take it down. Dozens of pages later, still no one can take it down even with tens of people blasting at it. Even some of the bigger people like Regeks and LiteSpeed were bombarding with layer 7 requests and took it down for no more than 30 seconds, nearly 5,000,000 r/s and still nothing. Even hundreds of gigabits of layer 4 did absolutely nothing.

OP. So in short, you won't be able to down it. :(

B?wseR - January 13, 2014, 4:58 pm

i just took it down no problem ovh to me is bad with ddos mitigation

Mhmm. Still resolving for me! ?

B?wseR - January 13, 2014, 6:19 pm

i did a 10 sec hit never said i was gong to null it

ShinKu - January 14, 2014, 4:37 am

Was with UDP or SOURCE DDoS? I use ReBOOT but it wont work with that booter I think?

Yeah just read this.
No way your going to take it down.

B?wseR - *January 14, 2014, 7:13 am*

no stresser on hf is gong to take it down but i took it down with my nix on my irc

ShinKu - *January 14, 2014, 11:24 am*

Hmm okay, thanks guys.. :(well it worked before but not anymore :(
