Thread: [iFile Crashing](#)

**g0han** - January 15, 2014, 1:05 pm

I open iFile and it wont fully open now, in the programs list it will show up as a semi transparent black rectangle.

How can I fix this? or whats a good source to add it from?

Thanks

**9EH** - January 15, 2014, 1:08 pm

I'm adding most of my apps from Insanelyi, if you don't have it google it for the exact source.

The latest iFile has registration problems, but it works for me on my i5s iOS 7.0.4.

Try reinstalling it. That's tje best tip i can give ya.

**g0han** - January 15, 2014, 1:55 pm

Thanks, reinstalling works however after a few uses same problem :( It becomes a pain reinstalling a few times a day. Anyone have any other options?

Maybe if you bought the fucking package then you wouldn't have to ask for support on a third party website about why your cracked application doesn't work.

Maybe if you thought before accusing you wouldn't have to make such a stupid post.

I was using the Trial version presented by the developer, Im not exactly going to buy the full "fucking package" of a product not working for my device am I?

So how about you pipe down a bit champ

Don't fucking try and lie now, you bastard. You're asking for a source asides from the official source that provides this package. All of which host cracked applications. Perhaps you didn't explicitly state it, but it's the only alternative.

why would I buy a package that doesn't work without trying if the full version works..

???

Cause it works.

I have iFile and I'm not experiencing any problems. Right and I paid for it. We don't allow discussing of copyright infringement under any circumstances. So please, request a cracked copy so I can report this thread to Staff. :)

Good for you, I just dont see how the functionality of a cracked app vs the actual app will be any different providing they're the same version.

I feel its more likely to be a different issue (potentially not ifile related, something to do with my files) than the source it was downloaded on, as I have tried it from the official source (trial) and still no luck. So if anyone has a helpful reply, feel free to contribute :)

**King of Hearts** - January 15, 2014, 5:14 pm

What iphone are you using? What version is it? This type of information makes it easier for others to help you. And yes, cracked applications can cause functionality to change in some cases.

**g0han** - January 15, 2014, 5:19 pm

Apparently this is a documented problem and it has happened throughout a few ifile releases. The solution I found was to get another file manager and clear iFiles preferences so I'll try that.

Thread closed for now, cheers
