Thread: [\[Help\] Server side and client side chat program](#)

Djokovic - January 16, 2014, 1:13 pm

Hi Coders,

Im looking for some help on how to create a chat channel in VB

obvoiusly im going to have a back end for the admin and front end where people are able to chat to each other.

all im looking for at the moment is setting it up so that you are able to send and receive messages

Any help would be awesome i have already tried a number of tutorials and used Google but no further forward.

Any help greatly appreciated.

so what was so hard to understand when you type this into google?
where the first results not clear enough?

wait, ima go try and see what i get, maybe im using a different version of google.

....2mins later....

ok, i see the problem..
you have to upgrade your google... this is my result

+10000 for the Upgrade google comment.

OP:

You should set your google to Auto Update so you dont have these issues in the future.

I can help, send me your skype name if you need help.

Btw: Nice comment nathan :P

If I were you, for the fun of it, I'd do it using php as server. And make it so my clients read the chat from an SQL database.
