Thread: [\[UPDATED DAILY\] Mike's Desktop AIO Desktop Tool \[FREE\] {OPEN SOURCE} *EASY TO USE*](#)

W R T - January 18, 2014, 3:25 pm

Hey HF,

So today I was playing around with Batch, mainly because I love to use it, and I decided to make some easy options in a sort of "All in one" batch file. It only has eight options so far, I will be updating this DAILY. It is important to me, since this is my first "real" release, that I keep up with it and try to make it the best I can.

I am currently looking for another developer as well, if you want to help me, I might want to implement Java and or, Python into the batch somehow as well, so if you would like to side-develop with me please shoot me a PM.

Back to the program! Now here is some media of what it currently looks like, file sizes, and things alike.

There are a few things that will open, by default, with Internet Explorer. I am sorry, I didn't want to do chrome.exe even though a lot of people do use Google Chrome, I just thought in the long run it'd be easier to use Internet Explorer.

Here is a virus scan and also the source code.

So basically that's it, I know it needs a lot more options... which I will get started on once the v1.0 release gets some feedback.

I hope people enjoy this, like I said, it's not really meant for one thing or another, it's just for common things that people do and my program will hopefully make there life a little easier.

Sincerely,
Mike

option. Otherwise it looks cool

Haha, it's not really an option :P It's more of a "Let's see how many people try this option" sorta thing, if you do it it'll say "LOL, Why would you want to do that?".

It wouldn't work anyway. You can't delete something you're currently running off of

I think everyone is aware of that, like I said, I put it there as a joke.

-Updates as of January 19, 2014.-

-Stability improvements, sometimes program would close unexpectedly.

-Added a new feature "Shutdown PC for a random reason"

*Basically you run this command line and it will turn off your computer because it's "too tired to work" or something like that.

-Updated the thread with a new updated DL link!

Sincerely,
Mike
