Thread: [\[REVIEW\] A review of the Logitech G600 Gaming Mouse](#)

phybe? Jr. - January 19, 2014, 2:16 pm

The Logitech G600 is an MMO Gaming Mouse that has a unique 12 button thumb pad. It's great for keybinds and macros, especially in MMO games.

I got mine a while ago, and so far, I have had no problems with it.

The full price is \$80, but is currently on sale on Amazon for \$62.

Here's a link: <http://www.amazon.com/Logitech-G600-Gaming-Mouse-Black/dp/B0086UK7IQ/>

Here's my review!

Spoiler ([Click to View](#))

The Logitech G600 is comparable to the Razer Naga. I personally prefer the G600 because it is cheaper and has Full RGB Spectrum colored backlight, which the Naga doesn't.

The box it comes in is a sturdy cardboard box with a magnet door.

The packaging is very well designed and is very protective. This is what it looks like with the magnetic door flap open.

When you take it out of the box, you get warranty information and the mouse. No free stickers. :(This is what it looks like without being plugged in.

The buttons on the side can be lit to any color in the RGB spectrum, and are very nice. It has the feel of clicking the home button on an iDevice.

I personally prefer a deep blue color with a touch of purple, but in this lighting it looks purple/pink.

What's very unique about this is that it has a 3rd main button. You rest your ring finger on it and it can be bound to any key/key combo you want.

It has a quality, braided cable. This is very sturdy and a little stiffer than normal cables. I prefer non-braided cables, but most people like braided ones.

The size is about 3 inches by 4.5 inches. The mouse is a little thicker than most mice though.

Thanks for reading, hope this helps!

There's a bit too many buttons on it don't you think? I like to have a few, but not that many.

billy111 - January 19, 2014, 4:07 pm

nice looking mouse but i agree with cwookie too many buttons
i would have to look away from my screen to make sure i push the right button

Yes, it is a little bit stiff, but definitely more durable.

I personally prefer a loose non-braided cable, though.

You mean like how we have to look at the keyboards when first learning to type, but after practice most can do so without looking? Same principle applies here, in my opinion. I haven't used the mouse yet, but it has plenty of sterling reviews; it has a learning curve, sure, but I wouldn't totally rule it out on that basis alone.

phybe? Jr. - January 19, 2014, 9:49 pm

It's all personal preference. It took me a while to get used to this mouse, but I really love it.

Abuser™ - January 21, 2014, 2:09 pm

This is a great mouse! I got it and have been using it for about a month or 2 and it works really well :)

G300!

I have two of those, they are amazing! I might do a review of that soon!

Nothing about specs or sensor quality?

phybe? Jr. - January 22, 2014, 6:35 am

The mouse can go from 200 - 8200 dpi. It's all configurable

What about sensor quality then?

Half the battle is sensor quality while the other half is comfort and durability

Nemuri - *January 22, 2014, 6:36 pm*

Looks like a decent mouse, I'll probably pick one of these up when my Naga dies.
