Our resolver goes beyond expectations:

Our OWN backend stub!

Bypass Speedresolve blacklisting

Bypass Resolveme blacklisting

Fast Resolver

4 APIs to make accurate checks

2 Unique, custom coded APIs (API1 & API2)

Yes, bypass those blacklists with our resolver!

Services Available:Blacklisting (\$3.95/mo)

Ad Space (\$15/mo)

API Keys for Stressers (No Ads, \$6.50/mo)

I've invested so much time into adding security to the user-end.

Forget your key-code?

Vicellus, that skype username is the weirdest shit I've ever seen.

When it does resolve, on any other resolver, it comes back as "gg faggot", on ours, if we let it resolve it just states "API FAIL".

Indeed so, however there are 2 master APIs that are checked first, which "lef", which the site you called originates from before heading to the 4 other keys, if at least 60% of the keys agree with the first tree, there are no api failures, else you get mixed results.

And yes.

Uhm, The API that we made (Server) works just fine.

[\[IMG\]http://imgizer.imageshack.us/v2/xq90/196/9plv.jpg\[/IMG\]](http://imgizer.imageshack.us/v2/xq90/196/9plv.jpg)

So I've added a few features, a cache of resolved IPs, you can search your own username there if you'd like and see what data we have on your, or someone else's skype username.

I've also compiled a script to check for blacklisted usernames via Resolveme, then add them to a database (usernames)

In the future, once that builds to around 1,000, I'm going to blacklist them.

The more you "resolve" users the more this list will build, if we reach 1,000 before next month, I will give out 250 free blacklists to the resolver and bot.

We use ResolveMe as API 4

We use ResolveMe as the blacklist cache check.

Aside from that, API2 and API3 were provided by us.

CowBlooper - February 3, 2014, 4:22 am

Wow, it seems that the resolver never exceeds 10000ms, very good speed! Some I tried take nearly forever! Seems like API1 - API3 are more accurate with API1 being the most accurate!

Try again, if you're having issues with it, try 3x in a row, if they come up blank there was a fault on my server end, if they just fail, then there is nothing I can do about it.

Yeah, 10s max time, we don't allow resolves after that, we will fail out all API's after 10 seconds on purpose.

Urgent Update:

Due to the amount of fake traffic coming to the website I have disabled most Proxies and VPNs from resolving users, this is NOT permanent.

I do Apologize for this, but the attacks on the forum all generate through the resolver.
Disabling most proxy/vpn connections is keeping the site alive.

Well you've said that wrong, you have your own resolvers.

I'll say it again, bypassing is when you're actually doing something to that service/got a way around it. Having your own "servers" doesn't mean you're bypassing anything.

Bypassing implies it goes around the typical blacklist (IE speedresolve or resolveme)

Using a metaphor, an alternative resolver would be an "alternative route for through traffic"

If you're blacklisted on one resolver, does that not mean you're going around it by using another resolver? Either way, it's just a question of the definition of "bypassing."

I don't see why you're so butthurt about it.

Woah there! I've been using <http://skyperesolvers.weebly.com/> for quite sometime already, they have a pretty good resolving system.

AFAIK, the way theirs work is simple, it relies on 4 APIs in order of accuracy. I think what TS meant by bypassing blacklisting is that even if a said person is blacklisted on one, he usually won't be blacklisted on the other three, especially if one of the APIs is unblacklistable.

Don't diss on other people's work just because you suddenly got a Skype resolver, his site has been around longer than yours, even up till now, I like his resolver more, more fallbacks and failsafe than yours.

<http://SkypeResolvers.weebly.com> uses 4 API's (2 made by us, 2 bought) and a 5th API (shows in the center of the screen) which is speed resolve to give you results around blacklists.

We cache all data processed so users can look it up if APIs are down, etc.

XXX connection refused on port 3603 = Apache is there, and will accept the data.
etc.

Happy scanning!

174.63.15.128 |

The three APIs are down, the one working atm is indeed speedresolve.

The two (2+3) are our sourced vps resolver - the 4th is resolveme.

Somethings been up with resolveme, and i dno what.

Also note: ProxyScanner can scan URLs aswell, not just IPs

Fixed an error with ip2skype and the 2 API servers that were down.

News: We are moving to a domain, new design and new features very soon.
Keep a eye out for the update.

BigDap - March 23, 2014, 4:16 am

Added a auto GEOIP location to the free-resolve.

Should output normally, any errors please PM me.

BigDap - March 26, 2014, 12:31 am

We are coding a SkypeCloud for the resolver - Rare to find these days and It's currently only 32 lines long! Works like a charm, runs from SpeedResolve (Unlimited) and will be available shortly, to access SkypeCloud you will need to be whitelisted on the website, to do so we will have a contact form available for that specific reason.

Thanks!

SkypeCloud is finished, we will be implementing this today!

BigDap - March 29, 2014, 8:34 pm

Bot's new commands:

!scan <ip/url> (Port scan 9 ports)

!cf <url> (CF resolver)

!geoip <ip>

!search <username> (Search entire database for username)

!cache <user/ip> (Search cache for info)

!scloud <username> (work in progress)

dev.omw.s

Currently BOT IS DOWN, only commands from me will work.

For now you can add, i will accept, you can ask me to run a command (or some).

Thanks!

Slanted - March 29, 2014, 8:55 pm

Does not work a signal bit...

I tried like 50 Skype Friends

Nothing
It's a fail

BigDap - March 29, 2014, 11:05 pm

You never added the bot - Therefore that isn't fail, it's false.

Bot is currently UP and running

Enjoy HF!

Also, Google, if you resolved something 10 times, use SpeedResolver - 10 times on 1 username.
Each time will be the same.

Also use the Resolver, 10 times, same results.

Have A Nice Day - March 30, 2014, 4:25 am

Had down time for re-code for the past 2 hours, left up 1 API system, all is back up.

Free Skype Resolver API
Still being given out to booter/program/stresser owners.

If you'd like to start your own resolver I'm considering giving out an API aswell.

API server 1 is being re-coded and placed on a new URL (google) as well as the website itself. For now, temp using 4 separate APIs, two of which still bypass most blacklists, but not all.

One is a beta resolver.

Sales are up.

We've increased our load capacity by switching over to a much faster server.

Spent 5 hours creating a wonderful and secure API system!

API keys are bound to IP/Sever's and cannot be used else-where.

Beta-Resolver is up.

Need an API key for our new Beta And Normal Skype Resolver?

\$15/mo for unlimited resolves!

\$5/mo for custom blacklists (All bots, websites and api keys)

Both of our servers are now online.

Enjoy the speed!

Website resolving is MUCH faster than API resolving.

<http://omwprxychk.com>

New site layout is finished.

[IMG]<http://imgazer.imageshack.us/v2/xq90/834/ytkd.jpg>[/IMG]

Features for Free Layout:

Fast Resolver

Low Blacklist Database

Literally no logs

Features for API

Secure, strong security for all keys generated via skypebot.

Custom -anything- you might want to add to our API

Custom tools built for your website/bot.

Search functions available - Search our database!

Takes literally 3 seconds to generate your key, security pass and link.

Fast as free resolver, but comes with a Beta Resolver.

ENJOY

Forgot to mention:

Ad Space:

\$10/mo

Rotation of ads based on random 50% chance per load.

BigDap - May 2, 2014, 10:23 am

<http://omwprxychk.com>

Will be giving away free blacklisting to anyone with a (HF) in their skype name, simply add my skype: dev.omw.s and ask about free blacklisting.

Will last 1 month, its my own 3 stubs so you most likely can be resolved, enjoy!

Setting up a third stub tonight, and setting up a Python Stub.

Setting up a .aspx resolver (Not me, a friend, first of its kind!)

Cannot wait.

Changed our API system over to a credit-basis.

Each key which still has days has 300 credits, all keys will now come with a standard 300 credit

rating for \$15.

You can purchase more credits via PM or Via Skype at 5 cents per credit.

Could be a server-side error though as my script isn't perfect.

Why?

Because unlike an API, like resolveme, this has it's own backend, sure so does resolveme and speedresolve, but I have 7 people blacklisted. The speed is nice, and maintained by the owner of speedresolve.

I don't use API servers, but I call them as such (IPs) due to how I use them during resolves.

You'd be plenty happy with this versus resolveme, since speedresolve no longer supports booter/bot calls.

Sadly the stub is newer, as is the site and my coding, everything was released quite pre-mature, as such there has been downtime.

But, there are systems in place already that count the months a user has been with us, and will later get rewarded each day for loyalty. (Like free credits or x free blacklists or something).

There's a-lot I've added and done, I'm here a-lot for support and won't ever shy from being an honest provider.

API is down, currently i don't know why.

Resolving still works via the site: <http://hfresolver.com>

xShadowAlk - June 6, 2014, 11:21 am

It doesn't block my VPN. I'm still able to use it.

HFResolver Change Log:

Resolve speed increased x2

Added a 4th stub server

PM me if you need any more information, or contact me via skype.

Resolver is working like a charm. As always thanks for the free blacklisting, Buddy.

Best regards,

Senpai ?

Mobile version in the making as we speak!

Website will state you are banned when in-fact you are not, and a-lot of people are experiencing a "410" error of "document not found" I apologize for this but i cannot fix this until the server manager does.

However the API still is working strong! <3

Codein - July 20, 2014, 8:25 pm

If I were to purchase the API for my stresser, do you have the IP2SKYPE as well? I have tried a few different Skype API's and all return as Username Not Found.

BigDap - July 20, 2014, 8:43 pm

Yes, there is a separate IP2Skype link, it comes with Resolver, IP2skype and proxyscanner APIs.

Btw, I fixed the 410 error, enjoy resolving :]

BigDap - August 7, 2014, 9:48 am

Our final update has been made, we removed almost all security - All users can now access the resolver and enjoy fast - accurate resolves. :)

Free Beta Skype Resolver

Giving away 5 API to websites who message me

Your site could be a resolver or stresser

Who uses my API?

TitaniumStresser.net

BigBangBooter.com

AnarchySkypeBot

fastgrab.biz

skype-resolver.us

InfectedStresser

You not using this on your own booter? Aren't you the owner of omniboot?

BigDap - August 7, 2014, 1:21 pm

I am not the owner of omniboot, we co-owned it, it's gone.

Hmm seems like it's working properly love the design thanks for sharing this for no cost.

BigDap - August 9, 2014, 11:47 pm

While most resolvers died from the latest skype patch, we're still up and running.

:)

BigDap - August 11, 2014, 4:35 pm

The rated #1 and MOST used skype resolver online: hfresolver.com

hfresolver.com free skype resolver

hfresolver.com free beta resolver

Enjoy!

Resolver is back online and working fine, API working fine.

Thanks for waiting!

BigDap - August 15, 2014, 2:21 pm

Back online, running with new layout and complete re-write of stub and API system!

Up and running skype bot, email dox, phone dox, resolver, beta resolver and more!

Loads of people online resolving!

I like!

I'm using the site for over 2 months now and it's still great. Keep up the good work Dap

BigDap - November 9, 2014, 6:40 pm

Oh I will, the site is about to go through another rewrite and we should be completely finished with code/stuff.

Should be much more secure/stable soon, also, should be getting another VPS stub soon.

BigDap - November 22, 2014, 5:09 pm

Added User IDs to help slow down bots, and help protect the site.
