Thread: [\[VB.NET\]Check URL for availability](#)

codepoet - May 3, 2010, 5:48 pm

Description:

This function checks if a given internet address is available.

```
Code Public Function CheckURL(ByVal URL As String) As Boolean
    Try
        Dim Response As Net.WebResponse = Nothing
        Dim WebReq As Net.HttpWebRequest = Net.HttpWebRequest.Create(URL)
        Response = WebReq.GetResponse
        Response.Close()
        Return True
    Catch ex As Exception
        Return False
    End Try
End Function

Vice - May 3, 2010, 6:23 pm

```
Catch ex As Exception
Return False
End Try
```

Alright, just stating it was already posted, no need for multiple threads.

codepoet - May 3, 2010, 7:55 pm

i never knew it was posted...i did not know my work would be here...which is why i have started posting my snippets on HF
