Thread: [\[Free RAT\]Cloud Net Beta - Quick Run Through Video + DOWNLOAD LINK](#)

Coding4Noobs - January 20, 2014, 11:05 pm

Since the completion of the builder, I decided to whip this up quick so that you guys can start using the product remotely. This video will quickly run through how to download, and setup Cloud Net - Beta.

[Video: <http://www.youtube.com/watch?v=Bgjk7GfNBIs>]

More in depth videos to come on how to use certain features as well as in depth written tutorials.

Blog (Download the software here and follow updates):

<http://cloudnetbeta.blogspot.com>

Project was just reborn. Same blog and links, however I will not be active on HF to post updates. Just posting now as this is the only place where I released it before.

If you want to contact me about it, comment on the blog or on one of my YT videos as those will be the only ways to contact me from now on.

Project will be undergoing some major changes in the next few weeks to come.

Including a complete rework of the whole project with a native client in C.

Once that's complete it will be going multi-platform as well.

WickedCruelty - January 20, 2014, 11:32 pm

Gonna keep an eye on this.

Good luck with the development !

Jaos - January 21, 2014, 1:03 am

THIS IS AWESOME, i really like it ! !

bigf0ot - January 21, 2014, 1:14 am

thank you for this HQ RAT

i really like it ;)

good luck with development

yawaka - January 21, 2014, 6:33 am

looks nice to me nice dev waiting for next update!

Coding4Noobs - January 21, 2014, 7:27 am

Next update will be tonight If you check the thread in my signature I also started on a mini face lift for it as well to make it easier on the eyes and more understanding with icons.

yawaka - January 21, 2014, 7:50 am

(Jan 21, 2014 08:27 AM)Coding4Noobs Wrote: [\[CITE\]](#) Next update will be tonight If you check the thread in my signature I also started on a mini face lift for it as well to make it easier on the eyes and more understanding with icons.im going to test your file mate gonna check if there's something not right ?

Coding4Noobs - January 21, 2014, 9:40 am

(Jan 21, 2014 08:50 AM)yawaka Wrote: [\[CITE\]](#) im going to test your file mate gonna check if there's something not right ?

go a head, it's perfectly clean. My proof, I have been coding it while live streaming.

wubulaien - January 21, 2014, 10:42 am

Thats a pretty nice alternative to the other rats.

The open port scanner is super needfull.

Are there any dependencies?

vouch for this!

Coding4Noobs - January 21, 2014, 3:41 pm

Requires .NET 2.0 right now but im debating whether or not to remake the client in java so that it will only have a java dependency instead.

NetOmega - January 21, 2014, 6:13 pm

(Jan 21, 2014 04:41 PM)Coding4Noobs Wrote: [\[CITE\]](#) Requires .NET 2.0 right now but im debating whether or not to remake the client in java so that it will only have a java dependency instead.

Java might be nice to have tbo... but I do have a question, the directory, its set to Beta, so is that defaulted to C:\Beta? and can you setup the directory in the C:\blah\blah format

OsulMofo - January 21, 2014, 7:50 pm

Would you ever consider an DDoS option with the bots you have collected you can boot people?

Coding4Noobs - January 21, 2014, 8:10 pm

(Jan 21, 2014 07:13 PM)Mortal991 Wrote: [\[CITE\]](#) Java might be nice to have tbo... but I do have a question, the directory, its set to Beta, so is that defaulted to C:\Beta? and can you setup the directory in the C:\blah\blah format

it will be C:\users\username\appdata\blah\blah

(Jan 21, 2014 08:50 PM)Hataraku Wrote: [\[CITE\]](#) Would you ever consider an DDoS option with the bots you have collected you can boot people?

It will have a network stressing feature added either later this week or next week. This RAT is actually being developed quite quickly if you watch the live streams.

wubulaien - January 22, 2014, 11:16 am

If the remote pc makes a new start theres dos pop up with the name of the rat and can be stopped by the user. Is there any update planned?

yawaka - January 22, 2014, 11:46 am

(Jan 22, 2014 12:16 PM)wubulaien Wrote: [\[CITE\]](#) If the remote pc makes a new start theres dos pop up with the name of the rat and can be stopped by the user. Is there any update planned?

what name ? clooud beta? you can change it

wubulaien - January 22, 2014, 11:55 am

Yes of course i can change it. But it's still visible that there is a process to be started.

Banana_ - January 22, 2014, 3:09 pm

Oh would you look at that, another RAT.

Lets hope that this one lasts. If you know what I mean.

Coding4Noobs - January 22, 2014, 3:09 pm

(Jan 22, 2014 12:55 PM)wubulaien Wrote: [\[CITE\]](#) Yes of course i can change it. But it's still visible that there is a process to be started.

Yeh I'm going to change that later. It's just like this now whilst it's in beta.

xiELLIOTTix - January 22, 2014, 3:19 pm

A huge issue i've had with all RAT tools is sending slaves, will it work for this one? I'll be checking it out nonetheless.

Thanks BTW.

Coding4Noobs - January 22, 2014, 5:01 pm

(Jan 22, 2014 04:09 PM)FuzzyBanana Wrote: [\[CITE\]](#) Oh would you look at that, another RAT.

Welp considering this one doesnt require me hiring a reseller that doesnt bring in sales, I don't think there should be able trouble in keeping this one alive.

cheers. ?

yawaka - January 22, 2014, 10:59 pm

Got problem in here, when i hit compile botton it comes up here ? its the new update the last update no problem

Jaos - January 22, 2014, 11:41 pm

^ yeah i got that same problem. D:
messagetoshort

Nice_guyz - January 23, 2014, 2:21 am

same here got the problem after the update thismsgisshort

Banana_ - January 23, 2014, 7:55 am

You could have easily told me you didn't require my help and I would have simply walked away.

In any case, I should expect the advertisement to help you with what you owe me right?

Coding4Noobs - January 23, 2014, 8:59 am

For those of you having issues with the builder, please redownload the .rar folder and extract everything. I forgot to include the mono cecil library by accident. Sorry It was very late last night when I released that update.

(Jan 23, 2014 08:55 AM)FuzzyBanana Wrote: [\[CITE\]](#) You could have easily told me you didn't require my help and I would have simply walked away.

In any case, I should expect the advertisement to help you with what you owe me right?
The thing is, you were hired to do specific tasks in order to bring in sales. That is what you were going to be paid for.

Did you do anything other then make a thread to market the product?

?XilluX - January 23, 2014, 9:02 am

Downloaded it and I have to admit it is a really good RAT except you can't hide the cmd console.

Coding4Noobs - January 23, 2014, 9:04 am

(Jan 23, 2014 10:02 AM)?XilluX Wrote: [\[CITE\]](#) Downloaded it and I have to admit it is a really good RAT except you can't hide the cmd console.

If the read the posts above. The CMD is still appearing on purpose as it's in beta. I'm im satisfied with the performance of the RAT. The console window will be hideable.

Banana_ - January 23, 2014, 9:06 am

(Jan 23, 2014 09:59 AM)Coding4Noobs Wrote: [\[CITE\]](#) The thing is, you were hired to do specific tasks in order to bring in sales. That is what you were going to be paid for.

No sense in trying to argue, I'm not gonna see a cent.

?XilluX - January 23, 2014, 9:08 am

Will this be also open source and in which language is it written?

Coding4Noobs - January 23, 2014, 10:04 am

(Jan 23, 2014 10:08 AM)?XilluX Wrote: [\[CITE\]](#) Will this be also open source and in which language is it written?

I'm not sure If ill make it open source or not as I don't want a bunch of mini RAT's running around with back doors in them as I have a feeling it would become am method of spreading..

people download the source change the UI, then add a backdoor.

<https://hackforums.net/showthread.php?tid=4004811>

check the thread above for live streaming

Bronson - May 20, 2014, 5:24 am

I think open source would be great, would be great to be able to replace emissary with this, as this doesn't have to authenticate with any servers to get to RAT interface.

would you consider releasing the source to your old emissary clients ???

rj2763 - June 15, 2014, 1:54 pm

How do you use this outside of your own PC I tried to send the exe to a different computer through usb but it opens and then closes CMD immediately and I am not connected to my client. If I open the exe on my own PC that I have Cloud Net downloaded to it works fine and I can see key strokes

and all of the above. I was up till 3am trying to figure this out so any help would be great...Thank you

Coding4Noobs - June 15, 2014, 4:19 pm

(Jun 15, 2014 01:54 PM)rj2763 Wrote: [\[CITE\]](#) How do you use this outside of your own PC I tried to send the exe to a different computer through usb but it opens and then closes CMD immediately and I am not connected to my client. The tool is made for educational purposes only and therefore the CMD window will always be there in some way shape or form for debugging.

It's for people, both developers and software analysts to analyze, and studying and learn from.

Xansman - June 15, 2014, 5:08 pm

Dude this is nice i vouch this. Thanks for the free download ;). Will definatly pay for this when its done

Coding4Noobs - June 15, 2014, 5:09 pm

(Jun 15, 2014 05:08 PM)Function-OC Wrote: [\[CITE\]](#) Dude this is nice i vouch this. Thanks for the free download ;). Will definatly pay for this when its done

It's free educational software xD. You will never have to pay for it.

Xansman - June 15, 2014, 5:58 pm

(Jun 15, 2014 05:09 PM)Coding4Noobs Wrote: [\[CITE\]](#) It's free educational software xD. You will never have to pay for it.

Uhm okay il click that donate button later then ;)

Coding4Noobs - October 23, 2014, 10:50 pm

Project was just reborn. Same blog and links, however I will not be active on HF to post updates. Just posting now as this is the only place where I released it before.

If you want to contact me about it, comment on the blog or on one of my YT videos as those will be the only ways to contact me from now on.

Project will be undergoing some major changes in the next few weeks to come.

Including a complete rework of the whole project with a native client in C.

kaipa2 - October 23, 2014, 11:30 pm

OMG TY DARKCOMET NEVER WORKED FOR ME BUT THIS DOES TY!

Coding4Noobs - October 24, 2014, 9:10 am

(Oct 23, 2014 11:30 PM)kaipa2 Wrote: [\[CITE\]](#) OMG TY DARKCOMET NEVER WORKED FOR ME BUT THIS DOES TY!

No problem, as I said in my post above I will no longer be active on HF to post updates, however, the program will still be underdevelopment if you follow it

Updates are pushed the program itself or through the blog.

¹³³⁷ - October 24, 2014, 3:43 pm

Cool so the project is now up for now?

Coding4Noobs - October 24, 2014, 4:08 pm

(Oct 24, 2014 03:43 PM)lasski Wrote: [\[CITE\]](#) Cool so the project is now up for now?
It's up and will remain up, I'm actually thinking about turning it OS.

However I will no longer be posting to HF. I will only be available on here for a few days whilst I handle some business.

After that, you will only find content from me on my blog for the RAT.

Adam12XX - October 25, 2014, 10:17 am

I want to be a beta tester please and thank you

The Last of Us - October 25, 2014, 11:14 am

(Oct 25, 2014 10:17 AM)Adam12XX Wrote: [\[CITE\]](#) I want to be a beta tester please and thank you
You can download it.

Why do you need beta testers?

Coding4Noobs - October 26, 2014, 1:41 pm

(Oct 25, 2014 11:14 AM)ViP x ReloaDz Wrote: [\[CITE\]](#) You can download it.

Why do you need beta testers?

Welp, I don't need them anymore, I pretty much just revived this dead post, as I'm back to working on this project. I had to stop development for while.

But the project is back, however, like I've been stating I will no longer be posting anything about it on HF, only to the blogs. I'm only on hackforums for the next few days whilst I try to handle some unfinished business.

As {Emissary} NET has dissapeared, and as apart of the agreement when I changed ownership of the product, was that support was supposed to be continued. I am contacting the sellers, if they don't reply, I will probably be releasing {Emissary} NET for free as well.

Fap_Trooper - November 21, 2014, 3:21 pm

This is a nice RAT. I cant even run the server tho. it says error on the console.

sureshsuri - November 21, 2014, 9:01 pm

is it require to port forward? please make it without need of port forwarding because begginers are not knowing how to port forward

earltop234 - November 21, 2014, 9:59 pm

nicely done :D btw the ip when compiling do i need to change it? or its still 127.0.0.1?

earltop234 - February 24, 2015, 2:15 am

my friend and i tried this one i compiled the file with the default settings the ip 127.0.0.1 9999 Cloud etc etc.. and i made it in stealth. so he download it and run the compiled file but when i start the server theres no client showing up. why?

NotoriousWalrus - June 14, 2015, 10:42 pm

(Feb 24, 2015 03:15 AM)earltop234 Wrote: [\[CITE\]](#) my friend and i tried this one i compiled the file with the default settings the ip 127.0.0.1 9999 Cloud etc etc.. and i made it in stealth. so he download it and run the compiled file but when i start the server theres no client showing up. why?
The program is most likely outdated and 127.0.0.1 is your own connection ?, that means it will only

work on your own connection.

Armada - June 14, 2015, 10:46 pm

(Feb 24, 2015 03:15 AM)earltop234 Wrote: [\[CITE\]](#) my friend and i tried this one i compiled the file with the default settings the ip 127.0.0.1 9999 Cloud etc etc.. and i made it in stealth. so he download it and run the compiled file but when i start the server theres no client showing up. why? 127.0.0.1 is the machines local loop back.

The server is likely running on his machine but only HE will be able to connect to it using the console. lol

For an IP# or Host you need to use YOUR IP# or Host as the call home, otherwise connectivity will always fail, as the slave will never be able to check in to the command and control console.
