Thread: [What programming language should I learn for hacking?](#)

Dusteh - January 21, 2014, 2:34 am

Hey everyone, what programming language should I learn to code programs such as RATs and any other hacking tools, and what are the pros and cons of that programming language, many thanks.

teapot - January 21, 2014, 3:26 am

Any language works just fine for viruses.
Given they all have their pros and cons.
The most common is C/C+ and C++.

Most of the RAT's I have (source) use a combo of C++, VB, and PHP.
But RAT's are big projects OP start small...

I made the same question time ago, i have been answered that python is a good language to start.
Consider that all language have similar bases and control structures.

Python is my main lang and was also my first.
I would definitely recommend it for a beginner.
However since windows dose not come with the Python interpreter so you could only spread to computers who have had it installed.
Most Linux distros come with is and
I believe mac.

Ahh i completely forgot about python.

it is also a very great language :)
