Thread: [Does HF Have IPv6 Support?](#)

Goodies - January 21, 2014, 5:10 pm

When I receive my new equipment, I plan on moving completely to IPv6.
Anyone using IPv6, does HF support it?

US will run out of IPv4's in about 4-6 months. The world has already run out lol

Anyways... I have a small IPv6 network, but it's a shitty configuration (old Netgear) and not at all secure (no NAT needed, I need more firewalls).

Thanks :D

BLURRYF?CE - January 21, 2014, 5:27 pm

Once demand is higher than supply, all that happens is that prices will rise. In fact, we're already out of IPv4 addresses, hence why they've gone up in price.

#Thunder - January 21, 2014, 7:23 pm

There's a thread about it being supported here: [IPv6 Support and Public Education Campaign](#) by [/dev/net/tun](#)

I'm pretty sure once IPV5 becomes larger that [Omniscient](#) will support the movement.

>IPV5

I'll assume a typo :) Internet Stream Protocol (ST or ST2) won't catch on anytime soon xD

Yeah that was a typo on my part. Sorry man.

Omniscient - January 22, 2014, 8:34 am

I can add an IPv6 IP at any time. Would take me probably an hour or two to fully configure the server. But even if you're coming from IPv6 you should be able to reach HF just fine. LMK if that's not true.

EDIT: IPv6 enabled. DNS will work and so will Apache. One problem is MyBB though which is NOT compatible with IPv6.

EDIT 2: I've disabled IPv6 because the CDN is not compatible yet. Neither is the geoip software I use as part of my security. Those are 2 things that would need to be fixed. I'm fairly sure that MyBB

has some issues too like banning via IP. It does correctly log the IPv6 ip though which is good. Hopefully in 1.8 they'll actually make it compatible but I kind of doubt they will.

Sorry guys...no IPv6 just yet. But if it became an emergency I could probable make fully adjustments within a day. If I had to.

Skorp - January 22, 2014, 11:06 am

Just wait a couple more months dude... i plan to switch aswell. It is too early imo.

Good guy admin right here. On top of things. :)

<http://ipv6-test.com>

Could have checked there.

Would have shown you if it had support or not :P

Okay.

I ended up getting more information (such as IPv6 bugs in MyBB) from Omni so I'm glad I posted here...
